Anatomy and Physiology I (BIO201)

Course Materials

- VanPutte, Cinnamon, Jennifer Regan, and Andrew Russo. Seeley’s Anatomy & Physiology, 9th edition, McGraw-Hill, 2011, ISBN: 9780077350031 [This text is available as an etextbook at purchase or students may find used, new, or rental copies at this link]

Course Description

This course provides a comprehensive look at the human body’s structure and functions. Topics include organization of the body, characteristics of life, anatomical terminology, how the body maintains homeostasis, the relationship of chemistry to anatomy and physiology, and cell function and division. The skin, skeletal system, muscles, and nervous system are examined. Sensory organs and the endocrine system are also presented. Several diseases and disorders are discussed, and as well as the cause, detection, and treatment of them. Students will also perform and complete content complementary at home labs with accompanying assessments as a lab component to this course.

Course Objectives

After completing this course, you will be able to:

- Describe the structural and function organization of the body.
- Explain the characteristics of life.
- Use anatomical terminology.
- Describe how the body maintains homeostasis.
- Relate chemistry to the field of anatomy and physiology.
- Describe how cells function and divide.
- Discuss the structures and functions of the integumentary, skeletal, muscular, nervous and endocrine systems.
- Describe how muscles, bones, and nerves work together to create movement.
- Describe the structure and function of sensory organs.
- Compare healthy and diseased tissues.
- Name several diseases and disorders of the body and explain what causes them.
- Explain how diseases and disorders of the body are detected and treated.
- Describe the interactions between various organ systems in the body.

Course Prerequisites
There are no prerequisites to take Anatomy & Physiology I.

**Important Terms**

In this course, different terms are used to designate tasks:
- **Proctoring**: all final exams require proctoring which can be completed conveniently from your home. A webcam is required.
- **Tutoring**: memberships include online tutoring for students to access with any content/subject related questions in the place of faculty. If your tutor is not able to answer your questions please contact a student advisor.
- **Review Activities**: These are non-graded, unassessed assignment and activities from your text which help reinforce course learning objectives and practice the skills discussed in a topic.
- **Graded Quiz**: These are shorter graded, timed quizzes based on individual topics.
- **Exam**: A graded, timed online test.

**Course Evaluation Criteria**

StraighterLine provides a percentage score and letter grade for each course. See Academic Questions section in FAQ for further details on percentage scores and grading scale. A passing percentage is 70% or higher.

If you have chosen a Partner College to award credit for this course, your final grade will be based upon that college's grading scale. Only passing scores will be considered by Partner Colleges for an award of credit.

There are a total of 1000 points in the course:

| 3 | Cell Biology  
Lab: Cell Structure and Function  
Lab: Diffusion and Osmosis | • Functions of the Cell  
• Plasma Membrane  
• Membrane Lipids  
• Membrane Proteins  
• Movement Through the Plasma Membrane  
• Endocytosis and Exocytosis  
• The Nucleus and Cytoplasmic Organelles | • Describe the general parts of a cell.  
• Describe the functions of cells.  
• Describe the structure and function of the plasma membrane.  
• Explain the formation of a membrane potential.  
• Describe the structures and functions of membrane lipids and proteins.  
• Explain the ways that substances pass through the plasma membrane.  
• Discuss diffusion and list substances that diffuse across the cell membrane.  
• Explain osmosis and describe the differences among hypertonic, hypotonic, and isotonic solutions.  
• Describe mediated transport.  
• Explain facilitated diffusion, active transport, and secondary active transport.  
• Describe the processes of endocytosis and exocytosis.  
• Describe the structure and function of the nucleus and the nucleolus.  
• Explain the structures and functions of ribosomes, rough end smooth ER, the Golgi apparatus, secretory vesicles, lysosomes, peroxisomes, proteosomes, mitochondria, centrosomes, cilia, flagella, and microvilli. |
| 4 | Genetics  
Lab: Mitosis and Meiosis | • Genes and Gene Expression  
• Cell Life Cycle  
• Genetics | • Describe transcription and translation in the process of gene expression.  
• Explain the roles of DNA, mRNA, tRNA, and rRNA in protein synthesis.  
• Explain the genetic code.  
• Explain what occurs during ||
posttranscriptional processing and posttranslational processing.
- Describe the stages of the cell life cycle.
- Explain DNA replication.
- Explain the events of mitosis and cytokinesis.
- Define genetics and explain the roles of chromosomes in inheritance.
- Discuss Mendel’s and modern theories of genetics.
- Define and give examples of phenotypes and genotypes.
- Explain karyotype.
- Describe the major patterns of inheritance.
- Describe the differences between mitosis and meiosis.
- Discuss various genetic disorders.

| 5 | Tissues | • Histology  
Lab:  
Tissues and Skin  
Embryonic Tissue  
Epithelial Tissue  
Connective Tissue  
Muscle Tissue  
Nervous Tissue  
Tissue Membranes  
Tissue Damage and Inflammation  
Tissue Repair | • List the four main tissue types.  
Define histology, biopsy, and autopsy.  
Describe the three embryonic germ layers and give examples of adult structures that are derived from each.  
Describe the general characteristics and major functions of epithelial tissue.  
Classify epithelial tissues based on number of cell layers and cell shapes.  
Describe the various types of epithelial tissues, including their functions and locations.  
Describe the structural specializations of epithelial tissues along with their functions.  
Explain the differences between exocrine and endocrine glands.  
Classify exocrine glands based on their structures and functions.  
Describe the various functions of connective tissues.  
Describe the cells of connective tissues. |
- Describe the components found in the matrix of connective tissues.
- List the different types of connective tissues giving their locations, structures, and functions.
- List and describe the three types of muscle tissue. Give the structure, location, and function of each.
- Describe the structure, location, and function of nervous tissue.
- Explain the difference between neurons and neuroglia.
- Give the locations, structures, and functions of mucous, serous, and synovial membranes.
- Describe the process of inflammation including the five signs of inflammation.
- Explain the major events of tissue repair.
- Explain how cancer cells differ from normal cells.

| 7 | Bones and Skeletal System | • Functions of the Skeletal System  
   • Cartilage  
   • Bone Histology  
   • Bone Anatomy  
   • Bone Development  
   • Bone Growth  
   • Bone Remodeling  
   • Bone Repair  
   • Calcium Homeostasis  
   • Skeletal Anatomy Overview  
   • Axial Skeleton  
   • Appendicular Skeleton  
   • Bone Disorders | • List the components and describe the functions of the skeletal system.  
   • List the three types of cartilage and describe the structure, location, and function of each.  
   • Describe the components found in the matrix of bone.  
   • List the types of bone cells and give their functions.  
   • Describe the structures and locations of woven, lamellar, compact and spongy bone.  
   • Classify bones according to their shapes. Give examples of each.  
   • Describe the parts of a typical long bone.  
   • Explain the process of intramembranous ossification. Give examples of bones formed through this process.  
   • Describe the steps of endochondral ossification. Give examples of bones formed through this process.  
   • Explain how bones grow in length and width.  
   • List factors that affect bone growth.  
   • Define bone remodeling and explain its importance.  
   • Explain the steps in bone repair.  
   • Explain the role of bone in calcium homeostasis.  
   • Describe the roles of PTH and calcitonin in bone remodeling and calcium homeostasis.  
   • Describe how bone fractures are classified.  
   • Discuss osteoporosis and how it affects other organ systems.  
   • Know the anatomical terms for temperature regulation, and vitamin D production.  
   • Describe the general treatment of burns and how burns affect various organ systems.  
   • Describe common conditions and infections that affect skin. |

Privacy Policy  |  Student Handbook
• Describe the differences between the axial and appendicular skeletons. List the bones of each.
• Know the bones of the skull including their sutures and other features.
• Explain the location, function, and structure of the hyoid bone.
• Describe the shape and divisions of the vertebral column.
• Explain the common features of the vertebrae and contrast the structure of vertebral from each region.
• List and describe the bones and cartilages of the rib cage.
• Describe three different types of ribs.
• Discuss the following disorders associated with the skeletal system: cleft lip, cleft palate, scoliosis, kyphosis, lordosis, spina bifida, herniated intervertebral disk, and whiplash.
• Describe the girdles that make up the appendicular skeleton.
• Describe the bones of the upper limb.
• Explain why the pelvic girdle is more stable than the pectoral girdle.
• Describe the differences between the male pelvis and the female pelvis.
• Describe the bones of the lower limb.
• Describe carpal tunnel syndrome and fractures of the malleoli.

8 Joints

- Classes of Joints
- Types of Movement
- Range of Motion
- Descriptions of Selected Joints

- Explain the differences among fibrous, cartilaginous, and synovial joints.
- Explain the differences among and give example of joints classified as synarthroses, amphiarthroses, and diarthroses.
- List the three types of fibrous joints. Give the structures and
| 9 | Muscular System Histology and Physiology | **Functions of the Muscular System**  
- General Properties of Muscle  
- Skeletal Muscle Structure  
- Sliding Filament Model  
- Physiology of Skeletal Muscle Fibers | **Joint Disorders**  
- Examples of each.  
- List the two types of cartilaginous joints. Give the structures and examples of each.  
- Describe the structure of a synovial joint.  
- Describe the different types of synovial joints. Give example of each.  
- Differentiate among uniaxial, biaxial, and multiaxial synovial joints. Give examples of each.  
- Describe the following types of movements: flexion, extension, plantar flexion, dorsiflexion, abduction, adduction, supination, pronation, elevation, depression, protraction, retraction, excursion, opposition, reposition, inversion, eversion, rotation, and circumduction.  
- Describe the factors that affect normal range of motion at a joint.  
- Describe the structures and movements of the following joints: TMJ, shoulder, hip, elbow, knee and ankle.  
- Describe the following types of joint disorders: arthritis, osteoarthritis, rheumatoid arthritis, gout, lyme disease, bursitis, bunion, tendinitis, dislocation, and sprain. |
| Physiology of Skeletal Muscle | Describe the arrangement of myofilaments within a sarcomere. |
| Muscle Fatigue | Explain the sliding filament theory. |
| Energy Sources | Describe the A band, I band, and H zone and what happens to them during contraction. |
| Slow and Fast Fibers | Describe the resting membrane potential and how it is generated. |
| Heat Production | Explain the role of ion channels in the production of an action potential. |
| Smooth Muscle | Explain the production of an action potential, including depolarization and repolarization. Describe how an action potential is propagated across the plasma membrane. |
| Cardiac Muscle | Explain the all-or-none principal. |
| Muscle Disorders | Describe the structure of a neuromuscular junction, and explain how an action potential is transmitted across the junction. |
| | Describe a muscle twitch, and the events that occur in each phase of a muscle twitch. |
| | Describe a motor unit, and how motor unit number affects muscle control. |
| | Explain how whole muscles respond in a graded fashion, and how the force of contraction can be increased. |
| | Describe the process of treppe. |
| | Describe recruitment and multiple motor unit summation. |
| | Describe complete tetanus and incomplete tetanus. |
| | Explain how the length of a muscle affects the amount of tension produced in the muscle. |
| | Distinguish between isometric and isotonic contractions. |
| | Describe how muscle tone is maintained. |
| | Describe the sources of energy used to produce ATP in muscle fibers. |
| | Define oxygen debt and recovery |
| 10 | Muscular System Gross Anatomy | ● General Principles of Skeletal Muscle Anatomy  
● Head and Neck Muscles  
● Trunk Muscles  
● Upper Limb Muscles  
● Lower Limb Muscles  
● Disorders of Muscles | ● Explain the following terms and give examples of each: origin, insertion, agonist, antagonist, synergist, fixator, and prime mover.  
● Describe the different types of muscles based on shape and fasciculus arrangement. Describe how they differ in strength.  
● Explain how muscles are named.  
● Describe the three classes of lever systems in the body and give examples of each.  
● Name the muscles of the head and neck. Describe the locations and actions of each.  
● Name the muscles of the trunk. Describe the locations and actions of each.  
● Name the muscles of the upper limb. Describe the locations and actions of each.  
● Name the muscles of the lower limb. Describe the locations and actions of each.  
● Describe the following disorders: laryngospasm, back pain, torn... |
| 11 | Functional Organization of Nervous Tissue | Functions of the Nervous System | • Explains the functions of the nervous system.
• Lists the divisions of the nervous system and describes the characteristics of each.
• Describes the structure of a neuron.
• Describes the classification of neurons based on structure and function.
• Describes the different types of neuroglia.
• Describes the structure and function of myelin. How is it formed in the CNS and PNS?
• Distinguishes between gray and white matter and describes components found in each.
• Describes a resting membrane potential and how it is created.
• Explains how resting membrane potential can change.
• Describes a graded potential.
• Describes the creation of an action potential and how it is propagated.
• Discusses the all-or-none principle and how it relates to an action potential.
• Explains the refractory period.
• Discusses the factors that determine action potential frequency, and the five levels of stimulation.
• Describes the factors that affect the speed of action potential conduction.
• Describes the structure and function of a synapse.
• Explains the difference between electrical and chemical synapses.
• Describes how a neurotransmitter is released into a synapse and removed from the synapse.
• Explains the effects of neurotransmitter binding to rotator cuff, tennis elbow, shin splints, plantar fasciitis, and Achilles tendon injuries. |

- Name the pouches that develop from the neural tube and the adult brain structures that they become.
- Explain the origin of the brain ventricles.
- List the parts of the brainstem and describe the structure and function of each.
- Describe the structure of the cerebellum.
- Describe the major regions of the cerebellum and the functions of each.
- List the parts of the diencephalon. Describe the location and function of each.
- Describe the structure of the cerebrum.
- Describe the functions of each cerebral lobe.
- List and describe three types of tracts found in the cerebrum.
- List the basal nuclei and explain their functions.
- List the parts of the limbic system. Give the function of each.
- Describe the meninges and spaces within them that surround the brain.
- Describe the locations of the found ventricles of the brain.
- Explain the circulation and functions of CSF.
- Describe the blood supply to the brain.
- Describe the structure and function of the blood-brain barrier.
- List the cranial nerves. Give the location and functions of each.
- Describe cranial reflexes.
- Describe the possible outcomes of traumatic brain injuries, skull fractures, hydrocephalus, and improper dental anesthesia.
- Describe neurofibromatosis.
| 13 | Integration of Nervous System Functions | - Sensation  
- Control of Skeletal Muscles  
- Brainstem Functions  
- Higher Brain Functions | - Describe the types of somatic and visceral sensory receptors.  
- Describe the roles of receptor potentials and adaptation.  
- Differentiate between primary and secondary receptors, and between tonic and phasic receptors.  
- List the major ascending sensory tracts and describe the functions of each.  
- Describe the sensory and association areas of the cerebral cortex and discuss their interactions.  
- Describe the primary motor area of the cerebral cortex and describe how it interacts with other parts of the frontal lobe.  
- Distinguish between upper and lower motor neurons, and between direct and indirect tracts.  
- Explain how the basal nuclei and the cerebellum regulate motor function.  
- Describe the sensory input from the brainstem.  
- Explain the role of the reticular activating system.  
- Discuss the motor output and reflexes of the brainstem.  
- Discuss the cortical areas needed for speech.  
- Describe the pathway that connects the cerebral hemispheres.  
- Describe the types of brain wave patterns and how they relate to sleep.  
- Compare and contrast the features of working, short-term, and both types of long-term memory.  
- Describe the functions of the limbic system.  
- Describe different types or pain, their causes and treatments.  
- Describe the following disorders: amyotrophic lateral sclerosis, |
| 14 | The Special Senses |  ● Olfaction  
● Taste  
● Visual System  
● Hearing and Balance |  ● Describe olfactory neurons and explain how airborne molecules can stimulate action potentials in olfactory nerves.  
● Describe the areas of the brain where olfaction is interpreted.  
● Define olfactory adaptation.  
● Describe the structures and functions of the different types of tongue papillae.  
● Describe the structure and function of a taste bud.  
● List and describe the five major taste sensations.  
● Describe how smell and taste are related.  
● Describe how action potentials are generated in a taste cell.  
● Trace the gustatory pathway from a taste receptor to the cerebral cortex.  
● Describe the structures and functions of the accessory structures of the eye.  
● Explain the chambers of the eye and the fluids they contain.  
● Name the layers of the eye and the parts of each layer. Describe the structures and functions of each part.  
● Describe the differences between rods and cones.  
● Describe the structure of the retina.  
● Describe how light stimulates action potentials.  
● Describe how images are focused onto the retina.  
● Describe the visual pathway from receptors to the visual cortex. |
| 15 | Autonomic Nervous System Lab: The Nervous System | Contrast the Somatic and Autonomic Nervous Systems | Explain the differences between the somatic and autonomic nervous systems. |
| 15 | Autonomic Nervous System | Anatomy of the Autonomic Nervous System | Describe the division of the autonomic nervous system. |
| 15 | Autonomic Nervous System | | Explain the arrangements of sympathetic and parasympathetic neurons and ganglia. |
| 15 | Autonomic Nervous System | | Describe the organization and functions of the enteric nervous system. |

- Describe binocular vision and depth perception.
- Describe the structures of the outer, middle, and inner ear. Explain the functions of each structure.
- Describe the locations of the fluids in the inner ear.
- Discuss the characteristics of sound.
- Explain how action potentials are generated by hair cells in the spiral organ.
- Trace sound waves as they travel from the outer ear to the spiral organ.
- Describe the auditory pathway from the spiral organ to the auditory cortex.
- Describe how static and dynamic equilibrium are detected.
- Describe how balance is detected and interpreted by the cerebral cortex.
- Discuss the following disorders: cataracts, conjunctivitis, trachoma, neonatal gonorrheal ophthalmia, sty, myopia, hyperopia, presbyopia, astigmatism, strabismus, diplopia, color blindness, macular degeneration, glaucoma, diabetic retinopathy, retinal detachment, retinitis pigmentosa, conductive hearing loss, sensorineural hearing loss, otosclerosis, tinnitus, otitis media, inner ear infection, motion sickness, and Meniere disease.
| 16 | Functional Organization of the Endocrine System and Endocrine Glands | • Principles of Chemical Communication  
• Hormones  
• Control of Hormone Secretion  
• Hormone Receptors and Mechanisms of Action  
• Overview of the Endocrine System  
• Pituitary Gland and Hypothalamus  
• Thyroid Gland  
• Parathyroid Glands  
• Adrenal Glands  
• Pancreas  
• Hormonal Regulation of Nutrient | • Describe the major autonomic nerve plexuses in the body.  
• Describe cholinergic and adrenergic neurons.  
• Compare the two types of cholinergic receptors.  
• Describe the different types of adrenergic receptors.  
• Explain how autonomic reflexes maintain homeostasis.  
• Explain the meanings of dual innervation, opposite effects, cooperative effects, general effects and localized effects of the ANS.  
• Describe the effects of the sympathetic nervous system on the body.  
• Describe the effects of the parasympathetic nervous system on the body. |
### Sensitivity to a Hormone

- Describe the two major types of receptor classes.
- Describe amplification and its importance.
- Explain the functions of the endocrine system.
- Describe the structure and location of the pituitary gland and hypothalamus.
- Describe the relationship between the pituitary gland and the hypothalamus.
- List the hormones secreted by the hypothalamus. Describe the target, regulation, and action of each.
- List the hormones secreted by the anterior pituitary. Describe the target, regulation, and action of each.
- List the hormones secreted by the posterior pituitary. Describe the target, regulation, and action of each.
- Describe the disorders associated with pituitary hormones.
- Describe the structure and location of the thyroid gland.
- List the hormones secreted by the thyroid gland. Describe the target, regulation, and action of each.
- Discuss disorders associated with the thyroid gland.
- Describe the structure and locations of the parathyroid glands. Give the target, regulation, and action of PTH.
- Describe the structure and location of the adrenal glands.
- Name the layers of the adrenal cortex and list the hormones secreted by each layer.
- Give the target, regulation, and action of each adrenal cortex hormone.
- Describe the hormones secreted by the adrenal medulla.
- Discuss disorders associated with the adrenal glands.
