Inter-Flo Medium Profile Unit Cooler

Medium to Large Walk-Ins
Coolers and Freezer Applications

Air Defrost
12,600 to 76,700 BTUH

Electric Defrost
10,500 to 55,600 BTUH

Hot Gas Defrost
10,500 to 63,700 BTUH

Inter-Flo

Features

Witt's Inter-Flo Medium Profile Unit Coolers are the perfect solution for a broad range of medium to large walk-in coolers and freezers. Models can be used with multiple refrigerants. The units feature powerful heavy duty fans that are individually balanced to provide vibration free operation and include UL/cUL-approved epoxy coated guards for corrosion resistance. Two and three fan models are available with air, electric and hot gas defrost configurations.

SIZES

There are a wide array of sizes available with capacities ranging from 10,500 to 76,700 BTUH at a 10° TD. Two and three fan models are available with air flow spanning a range of 3,320 to 9,130 CFM.

HOUSING

Each unit is constructed with a rust-free, heavy gauge, textured, aluminum housing which is light weight yet extremely durable. Air and electric defrost models have hinged drain pans to allow for convenient servicing and maintenance (Hot Gas drain pans are not hinged). Slotted hangers are provided on all units for fast installation.

COIL

Seamless copper tubes are staggered and mechanically expanded into heavy gauge corrugated aluminum fins to assure maximum heat transfer. Die formed fin collars are provided for accurate fin spacing. Heavy gauge hangers are fastened directly to the tube sheet of the coil to provide high structural strength.

MOTORS

Standard models feature permanently lubricated, high efficiency PSC (Permanent Split Capacitor) or Electronically Commutated (EC) motors. Single speed EC motors are available for 115V and 230V. Dual Speed EC motors are available as an option for 115V, 208/230V or 460V and are compliant with California Title 24 regulations. PSC motors are available for 115V, 208/230V, 460V and 575V requirements. All motors include thermal overload protection. Inter-Temp unit coolers use either 1/8 HP, 1050 RPM or 1/3 HP, 1075 RPM motors.

FANS & FAN GUARDS

Powerful heavy duty aluminum fans are individually balanced to provide vibration free operation. Standard heavy gauge wire fan guards are UL/cUL-approved epoxy coated for corrosion resistance. Optional air straighteners are available for increased air throw when required.

REFRIGERANTS

Inter-Flo unit coolers are designed for multiple refrigerants including R404A, R407A, R448A, R449A/B, R507, and R134A. Please specify system refrigerant requirements when ordering. A separate compartment is provided for all refrigerant connections which allows ample room for internal mounting of expansion valves. Inter-Flo can also be used with chilled water or glycol solutions — contact factory for selection.

ELECTRICAL

Available in 115V/1, 208/230V/1, 208-230V/3, 460V/1 or 575V/1. Inter-Flo can also be operated on 220V/1/50, 220V/3/50, 380V/1/50 and 380V/3/50 power. A large compartment is supplied for all electrical components and is easily accessible by removing the end panel. All models are UL and cUL listed.

AIR DEFROST

Air Defrost models (IFA) are designed for use in coolers at +35°F and warmer. All components are factory wired to convenient screw-type terminal strips. Complete air defrost systems are available from Witt.

ELECTRIC DEFROST

Electric Defrost models (IFE) are designed for use in coolers and freezers between 35°F to -30°F. The placement of heaters within the refrigeration coil allows for a more efficient and rapid defrost cycle than other designs. This arrangement enables the energy from the heaters to be conducted from the center of the core out, providing an even defrost pattern. All heaters are factory installed and wired to screw type terminal blocks, allowing for quick field hook up or change over from 1 to 3 phase with the installation of jumper wires. Separate, fixed defrost termination, fan delay and heater safety controls are factory mounted for optimum performance of each control function. Drain pans are heated for fast, reliable drainage. Timer and contactors are available as options. Complete electric defrost systems are available from Witt. Contact the factory for details.

HOT GAS DEFROST

There are two types of Hot Gas Defrost models available: 3-pipe Hot Gas models (IFH) and 2-pipe Hot Gas Reverse Cycle units (IFG). Hot Gas Defrost models are designed for use in coolers and freezers between 35°F and -30°F. All units include separate fixed defrost termination and fan delay controls which are factory mounted for optimum performance of each control function. A hot gas drain pan circuit is provided, thus eliminating the need for electric heat and additional wiring. Refer to the current Witt Technical Bulletin HG for piping. Reverse Cycle units can also be used for Alternating Evaporator Systems.

Air Throw

Air throw is greatly affected by installation variables. Optimum air throw is obtained by high ceiling with no interference from beams, or return air restrictions. Inter-Flo unit coolers will throw air up to 50 feet under ideal conditions, 60 to 70 feet with air straighteners.

Medium Profile Unit Cooler

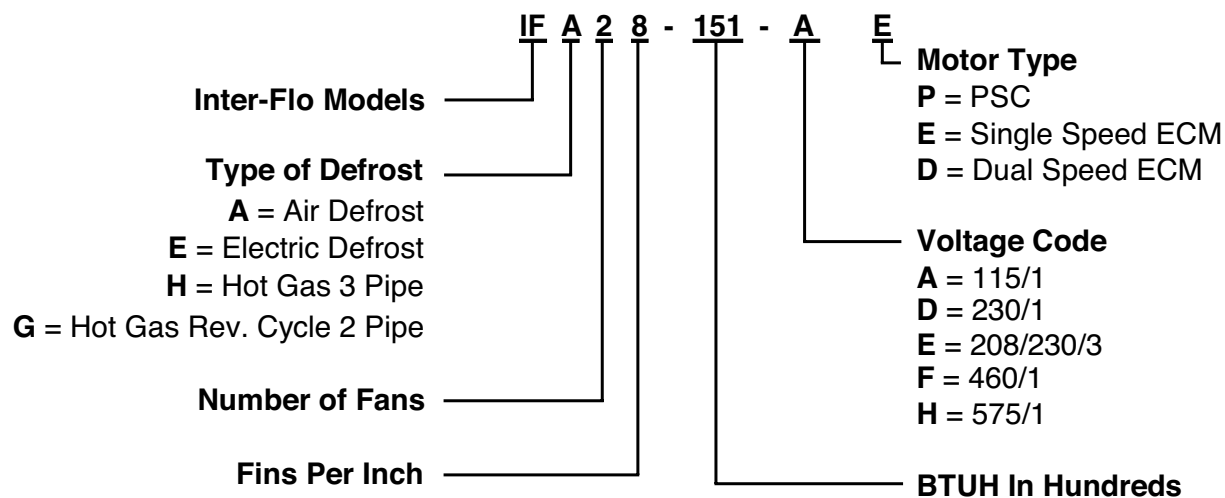

Standard Features

- Lightweight and durable embossed aluminum housing
- Permanently lubricated, high efficiency ECM or PSC motors with thermal overload protection
- Hinged drain pans for easy access (Air and Electric Defrost models)
- Heavy duty fans individually balanced to provide vibration free operation
- UL/cUL-approved epoxy coated guards for corrosion resistance
- UL certified for use with multiple refrigerants

Optional Features

- Dual Speed EC motors
- Coated fins
- Copper fins
- Coated coil
- High throw fan guards (air straighteners)
- Galvanized steel housing
- Insulated drain pans
- Adjustable defrost terminator and fan delay control

Electric defrost kits consist of components that are necessary to control the defrost cycle. The kits are available as a factory installed option when ordered with a condensing unit. Not all Ed-Kits are available for all condensing unit models. The contents of each kit is described above, along with the function of each component below.

Timer: Initiates the defrost cycle. Also used as an override protection for defrost termination.

Auxiliary Switch: It's mounted on the compressor contactor and prevents the defrost contactor from operating whenever the compressor is energized.

Block-Out Relay: Serves the same function as auxiliary switch. Used when defrost contactor is not required (lower wattage single phase only).

Defrost Contactor: Carries amperage load for heaters.

Fan Contactor: Used with 460V motors or when 230V motors are wired 3 phase.

Sequencing Relays: Provides interconnection of multiple unit coolers on a single system so that each unit cooler is allowed to individually terminate defrost on temperature.

– Not available.
