

Proclaiming Evidence for Truth

THIS WEEK'S CREATION MOMENT

Another Miracle of Sight

"Understand, ye brutish among the people: and [ye] fools, when will ye be wise? He that planted the ear, shall he not hear? he that formed the eye, shall he not see?" - Psalm 94:8-9

The eye is a chemical and technological wonder. It would take thousands of carefully directed mutations for an eyeless creature to develop sight. And since a partial eye doesn't provide sight, each of these thousands of mutations would offer no advantage to the creature.

The fact is, of course, that mutations don't happen this way. All the true mutations we know about have harmed rather than helped the creature with the mutation. This fact places the thought of thousands of positive mutations in a row outside the realm of scientifically reasonable consideration. In addition, neither living nor known fossil animals show any evidence of gradual development of eyes. Therefore, the most reasonable scientific conclusion is that there is a Creator Who designed and created the eye.

The lens of the eye is a marvel of chemistry. It is made up of a concentration of protein molecules inside water-lined cells. When scientists learned this, they were amazed. Protein molecules in water are not transparent, as the lens must be. After more research, they discovered God's secret. The high concentration of protein molecules in the lens of the eye causes the proteins to pack together something like the molecules of window glass. As a result, the normally opaque protein solution in the lens becomes transparent.

The eye does more damage to ideas about origins that leave out God than almost any other feature of the creation because it allows us to see the Creator's fingerprints all around us!
