

Proclaiming Evidence for Truth

THIS WEEK'S CREATION MOMENT

Astonishing "Coincidences"

"Many, O Lord my God, are thy wonderful works which thou hast done, and thy thoughts which are to us-ward..." - Psalm 40:5

A coincidence occurs when two events that you know are not related happen in such a way that they seem related. But when more than two seemingly unrelated events seem to work

together, you would have to conclude that they were, in fact, related.

That's why scientists are beginning to wonder whether there isn't a plan to the universe after all. For life to exist in the universe, literally millions of details must come together in just the right way. If the force of gravity or the forces holding the atom together were only a tiny bit stronger or weaker, life could not exist. The carbon atom is the basis of life. Is it coincidence that the carbon atom is unique in its ability to form the long, complex chains of molecules needed for life? If stars burned at a slightly different rate than they do, life would either be burned up or frozen to death.

Many scientists have actually stated in writing that they are astonished at the huge number of cosmic "coincidences" that have come together in the universe to make life possible. Some are even suggesting that the universe has an impersonal intelligence. But why cloud the issue this way? Why not simply recognize that there is indeed a Creator God who has created a whole universe just for the benefit of life, especially humankind?
