

## **Fossilized Fence Roadblocks Evolutionary Dating**

When you see a fossil, or hear the word, you should not automatically think millions of years. In an attempt to maintain the illusion that fossils automatically must be millions of years old, evolutionists dismiss the examples of young fossils as freaks of nature. However, there are many examples of recent fossils.

It was low tide when a circular rock was discovered on a western Australian beach. A little over two feet in diameter, the wheel-shaped rock weighed 165 pounds. It was hard and solid, even ringing like a bell when struck. Examination proved that the rock was a dense high calcium sandstone. Even before it was cut open for study, the rock seemed unusual. Once it was cut open it became clear that this was fossilized fence wire. Further analysis identified the wire as "Number 8" fence wire that was used at a nearby sheep station between 1920 and 1970. It was standard practice that after ten years old fence wires were replaced. The old wire was coiled and often thrown into the sea. This fossil could have been only about 30 years old and not more than 80 years old!

The existence of fossils does not disprove the Bible's account of history, which dates the earth at only about 6,000 years old. If fossils can form in a relatively few number of years, 6,000 years are more than enough time to form all the millions of fossils discovered.

### **Luke 19:40**

**“And he answered and said unto them, I tell you that, if these should hold their peace, the stones would immediately cry out.”**

Prayer: Lord, protect me from being misled by those who doubt Your Word. Amen.
