

Indegene Selects Advera Health Analytics' Evidex® Signal Management Platform to Support Its Pharmacovigilance Intelligent Safety Suite

Santa Rosa, CA – February 26, 2020- Indegene, Inc., a leading next-generation solutions organization for the life sciences industry globally and Advera Health Analytics, Inc., a market leader in cloud based software-as-a-service pharmacovigilance solutions, today announced an agreement that will integrate Advera Health's Evidex®, a next generation drug safety signal detection and management platform, with Indegene's Intelligent Safety Suite.

With this agreement, Indegene will offer Advera Health's Evidex platform as an integrated solution for its clients. This will accelerate drug safety decisions through technology built specifically for modern pharmacovigilance analytics and workflow. Indegene's clients will be able to leverage Evidex to manage safety signals, inquiries and requests from detection through resolution and elicit actionable intelligence from drug safety data.

"Pharmacovigilance departments of all sizes are facing an increased burden to not only comply with regulatory requirements, but also to contribute to all facets of drug development and commercialization. It is vital that technology solutions create efficiencies and drive insight," said Brian Overstreet, President and CEO of Advera Health. "Indegene's experience in seamlessly integrating medical expertise, operational flexibility, and technology implementation makes them an ideal partner to help drive adoption of Evidex".

"Drug safety departments of all sizes trust Advera Health's Evidex for signal detection and management, to meet GVP regulatory requirements, and to drive company-wide value from adverse event data," said Siva Thiagarajan, Vice President and Head of R&D Business. "With this agreement, we can now offer our clients seamless integration with the artificial intelligence and automation technologies our Intelligent Safety Suite provides."

Since launching Evidex, Advera Health has created a next generation pharmacovigilance platform to connect disparate drug safety data sources and provide a user experience that elicits actionable intelligence from those data. The Evidex platform links to internal ICSR databases, FAERS, VigiBase, and other data and provides for a validated, audit ready environment to track and manage safety issues that are found in those data.

About Advera Health Analytics

Advera Health Analytics is a global leader in pharmacovigilance software, analytics, and data at the leading edge of drug safety science. Founded by a group of passionate healthcare entrepreneurs, Advera Health's mission is to mitigate risk in the healthcare system by improving the transparency and actionability of drug safety data through the curation and aggregation of large disparate datasets and the application of advanced analytics and workflow.
