

Connecting AgSense and AgStudio

Connecting AgStudio to your AgSense WagNet account

Step #1: Setting up your AgStudio database for use with AgSense WagNet

Send agstudiosupport@granular.ag your AgSense username (do NOT send your password) to have your database linked to your AgSense WagNet account. Once linked, you receive a notification to proceed with linking specific growers.

Step #2: Linking individual growers to your AgSense WagNet account

1. In AgStudio, select **Add-Ons | AgSense | Link Grower to AgSense**

Link AgSense Account to Grower

AgSense Account

To link to an AgSense account you must:

- 1) Contact AgSense and ask them to "Please link my account to MapShots".
- 2) Enter your AgSense account name into the AgSense Username field.

AgSense Username:

Email Notifications

If you would like automatic notification of significant AgSense events (such as getting your account linked), you can enter a notification email address. You can remove or add this address at any time by revisiting this dialog.

Email:

Automatic Status Updates

The operating status and location of your AgSense pivots can be updated automatically every few minutes. Data from connected weather stations and moisture sensors will also be retrieved.

Check to enable automatic status updates

OK Cancel

2. In the Link AgSense Account to Grower dialog:
 - a. For the AgSense Account section, contact AgSense and ask them to link your account to AgStudio. Then, enter your AgSense Username.
 - b. For EMail Notifications, enter the email you would like automatic notifications sent to, optional
 - c. For Automatic Status Updates, select/deselect the option to enable automatic status updates

Your grower's AgSense account has now been linked to your AgStudio grower. Pivots will be imported as well as the visibility of those pivots, with status, from within AgStudio Select.
