

# Lithium Battery Powered Bright Pad

---

## [Product Introduction]

LED bright pads were originally created to facilitate sketching. Now they are widely used for diamond painting, tracing, vinyl weeding, stenciling, tattoo art transferring, 2D animation, X-ray viewing and more. After several versions of updates and redesigns, we finally released the A4-D28B wireless rechargeable bright pad.

## [Specification]

Product Model: A4-D28B

Product Size: 342\*243\*11mm

Working Areas: 311\*218mm

Working Time: 4-6 hours

Illumination: 390/740/1090/1440/1780/2140

Dimming Method: 6 levels + Stepless adjustment

Rated Input: 5V 2A

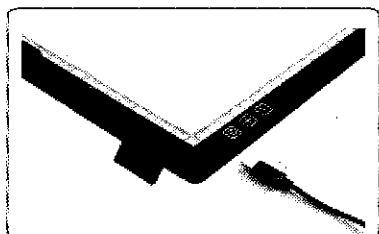

Rated Power: 5.5W

Charging Port: Type-C

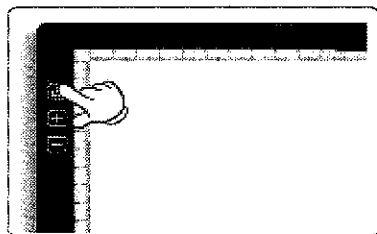

Color Temperature: 6500K

Battery Capacity: 1500mAh

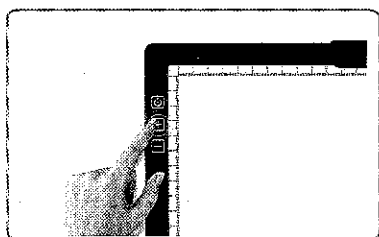

## [Usage instruction]

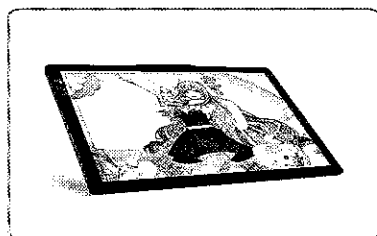

1. Fully charge the bright pad

2. Gently press the switch button to turn on the bright pad

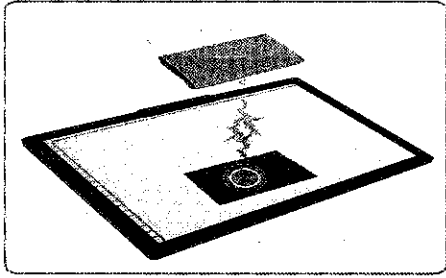

3. Press "+/-" button to adjust the brightness

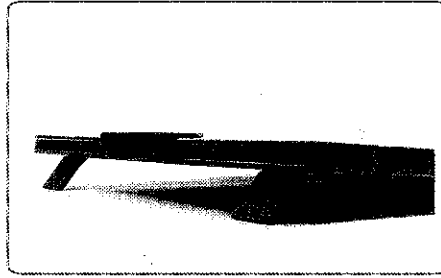

4. Place the bright pad on a dry flat surface and start crafting

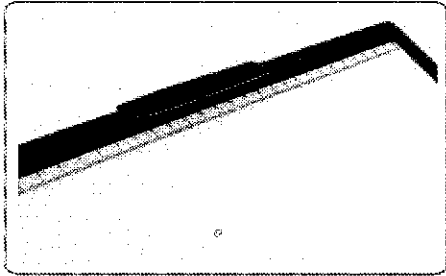

## [New Designs]

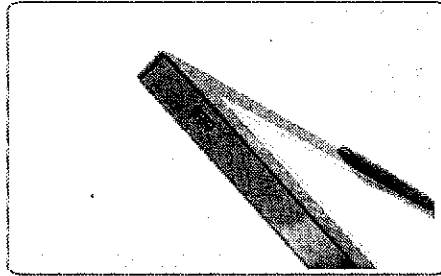

1. Built-in rechargeable battery

2. Foldable stand

3. Paper clip

4. More durable type-c charging port

## [Warm tips]

1. Store the bright pad in a dust free and dry environment.
2. The rechargeable bright pad can be used while charging, but it's better to charge first for longer battery life.
3. After connecting to the power supply, the RED indicator light on means it is charging, and it turns BLUE when fully charged.
4. The indicator light is located next to the charging port.
5. A full charge takes just 2 hours via the included USB-C charging cable. Other longer cables may cause a longer charging time.
