

eAppendix Figure. Change in Per-Beneficiary Medicare Spending for Beneficiaries with Full Medicaid versus Beneficiaries with Partial Medicaid, 2008-2015

States are categorized by Medicaid income limits for full Medicaid and then listed in order of greatest to least share of dual-eligible beneficiaries with partial rather than full Medicaid benefits per-beneficiary.

Notes: Based on authors' analysis of the Master Beneficiary Summary File, including the Cost and Use segment. States are identified based on their state postal codes. The green and blue points indicate average annual per-beneficiary spending growth for full and partial Medicaid participants, respectively, from 2008 to 2015.
