

A new era of ring removal.

Why use our Ring Rescue Lubricant?

Our Ring Rescue lubricant gives you the best chance to remove a stuck ring. With its non-hydrating properties, our lubricant sits on top of the skin instead of being absorbed like other lubricants which can cause the finger to swell. With the right balance of slippery for proper ring manipulation and stickiness for grip, you'll be removing rings in no time with our laboratory-tested lubricant.

Advantages of our Ring Rescue Lubricant

- ✓ **Non-hydrating** – some water-based lubricants are hydrating which causes a slight increase in finger size, decreasing the chance of ring removal. Our lubricant will not increase finger size, giving you the best chance to remove the ring
- ✓ **Slippery and sticky** – it is designed to be very slippery between skin and metal, while being slightly sticky between gloves and metal. This is beneficial as the ring can slide off the finger, yet by wearing a glove you can still firmly grip the ring without it slipping
- ✓ **Laboratory tested** – proven to be extremely effective for stuck ring removal
- ✓ **It's safe!** – it meets both European and North American standards for safety

**Apply the lubricant,
remove the ring,
*be the hero.***
