Market Sentiments

Web Search Interest in 1 Year (2010-2011)

Shows general market interest, attention and curiosity online about the topic.

Interest over time

[Learn what these numbers mean](#)

Regional Interest

Shows general market interest online according to geographical location

Regional interest

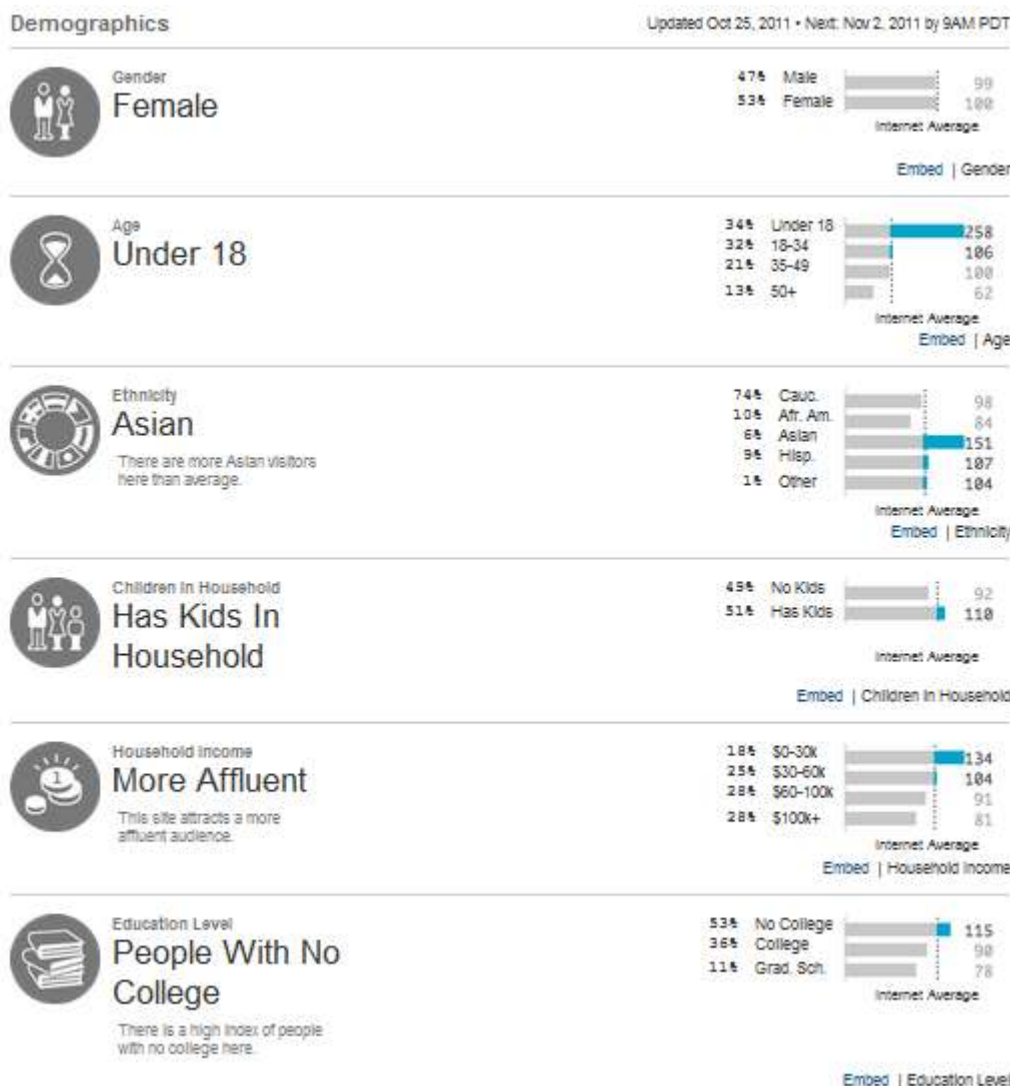

1.	Sri Lanka	100
2.	Nigeria	71
3.	Bangladesh	64
4.	Pakistan	60
5.	Kenya	57
6.	India	47
7.	Indonesia	42
8.	Philippines	42
9.	Singapore	32
10.	South Africa	27

Note: All results from Google Insights are normalized. So just because a particular region doesn't appear on the top Regional interest list, it doesn't necessarily mean that the niche isn't popular at all - it just means that the term is more popular in other regions.

Demographics (data based on freewebs.com)

Demographics are the characteristics of a population. In the field of marketing, it is important to define the demographic profile of your target audience. This is to identify target audience in the overall population and to create a clear and complete picture of the characteristics of the target consumer.

The following data tells you the gender, age, children per household, education status, income levels, and other demographic insights of your target audience.

The “index” represents the delivery of a specific audience segment compared to the internet average of 100. Composition, which is represented by the % of audience figure on the left side of the chart, represents the percentage of a property’s total audience that meets a specific demographic criteria.

For example, an index of 100 indicates the target audience is equivalent to the demographic make-up of the total internet population. Any increase over 100 means that the property is “over indexed” and attracts a more concentrated group of a particular demographic group than in the general internet population.

Psychographics (data based on freewebs.com)

In the field of marketing, psychographic variables are any attributes relating to personality, values, attitudes, interests, or lifestyles.

The following data profile shows other topics that the audience is likely to be interested to visit and the affinity indicates how much more likely than average.

An affinity of 10x means that your target audience is ten times likelier to be interested in the topics than the average internet user.

Problems & Frustrations

- **Problems with an error**

Hi, I have created a Website using Joomla on Wamp server. Now I have uploaded entire files to on the ftp server. I am getting error message: Unable to open WampServer's config file, please change path in index.php file. Kindly suggest what changes are required on index.php file.

- **Problems with VPS**

I have a website with Alexa Traffic Rank of ~21000, ~300 in Iran that is currently hosted by Sub hosting on VPS-3 Linux Plan. It is evident that their service is inexpensive in compare of reliable companies. But now we are on overload in many cases. We have a lot of Internal Server Error (500) and errors about memory on Cpanel and PHPmyadmin. Sometimes the website is completely inaccessible and we cannot even access to WHM. We started by VPS-1 of this company and they offered us to upgrade step by step. you see now they say upgrade again. However I think our VPS specification seems good for our website. What do you think? Are they cheating?!

- **Problems with transferring from one web hosting provider to another**

For months I've been having problems with webhosting pad. My site keeps getting suspended coz of server overload. Already transferred to a new host Fatcow. transferred databases again but my site was suspended again, I checked with Fatcow to ask why and to my shock they told me that the name servers are still pointing to webhosting pad. I do not know how this happened coz I clearly remember changing the dns name servers and pointing it to Fatcow. So all this time while I'm doing updates I'm still updating the one on webhosting pad. Expectedly, with a couple of updates my site got suspended again. they didn't want to give me access anymore to the website even the cpanel I had to beg (yes beg)

and really plead for a chance just to get my files back. I was now able to fix it and redirected everything to Fatcow.. but I'm experiencing erratic connections. Some people see the website completely with no problems, can even access the forum. Does it mean I made the transfer correctly?

- **Problem with hosting account**

I am curious if anyone is having problems with GoDaddy hosting accounts? I do know that Godaddy hosting is not the greatest with regards to ease of use, but that is a different story. However, since I am basically locked in for the next 10 months, I have to make it work. Anyways, I have the unlimited hosting plan. Currently I am operating a few minisites. Over the past few weeks I have nothing but trouble with accessing, and apparently Google has to. Whenever I try to go to them I get "internal server error", "error 500" and the likes. I called into customer service and they said they found nothing other than an overcrowded server. Now they are telling me that my account is outdated by using the "OLD" legacy hosting plans. How can that be, I just purchased it less than 2 months ago. I feel like this issue is intentional by GoDaddy so that I might upgrade to the "new" 4GH system. I haven't had any issues with it until earlier this month. There have been no significant changes to any of my sites. Well I am trying to find out if anyone else has had the same issues. If so, did switching to the 4GH hosting fix the problems?

Two weeks ago I bought and paid a Web hosting with a major Swiss hosting provider that also included a domain hosting. I agreed with the Terms and Conditions and paid with my Verified Pay Pal account immediately and expected to get a link to the control panel. I disagreed over this conditions since they are not part of the Terms and Conditions I signed and after few mails they said they will refund my money. The problem is that they already registered my domain and I am not able to register it with another company. I do need this domain and consider it my property since I paid for its registration. Anyway two weeks later

I still don't have my domain nor my Payment refunded and I really don't know what to do? Is there any consumer protection agency in Switzerland that I can turn to? This guys does not seem to care about me at all...

"I am facing hosting problem. All of my websites are down for last many days. My hosting company is telling me that websites data is deleted and nothing exist in your account and we are trying to restore from the backup which may take some time and they advised me to be patient.... They say, they are facing problems on node..... Unfortunately this incidence is happening second time in two months.

Its more than 5 days now and all of my websites are still down. Can someone suggest me any good hosting company for vps accounts and also some good layer to get help against my existing host?"

- **Don't know how to connect domain to hosting account**

Hello, I bought a domain on godaddy.com and got free hosting from 000webhost.com. I created the account and uploaded my site with filezilla to the public folder. After uploading the site I tried to visit to see if it works and it basically directs me to the page does not exist...am I doing something wrong? "

- **Error in running a script**

I have written a script for Wikipedia & it works fine on my computer, yet when I upload it to my web host(Dreamhost) it doesn't work & says that the user I am trying to log in as is blocked-this is not true, it works on my computer & I'm not blocked. This is the exact error message I get- Any ideas as to why it isn't working?
