“Miracle of the Magi” Wipes Out Cancer Cells in 24 Hours  
17
Buried deep in Nevada’s Mojave Desert, in one of the truly remote stretches of the United States, is the most secretive military base on Earth.

The U.S. government denied its very existence for years — but today, the public knows it as Area 51.

Area 51 has been the subject of countless rumors and conspiracy theories. There’s even been talk about secret alien technology being tested behind its heavily guarded perimeter.

And eventually we learned that the base is used to test highly classified military aircraft, like the U2 spy plane and the stealth bomber.

But growing throughout Area 51 may be a much larger secret… one that could set the entire cancer industry on its head.

And it’s one that the federal government has kept from millions of cancer patients for decades.

It’s the creosote bush, also known as chaparral. And it may be…

**The greatest natural cancer killer EVER discovered.**

An investigation by *Popular Mechanics* magazine reported that practically nothing is growing in the grounds of Area 51 except creosote, which survives well in the Mojave.

Just think about that… of all the land that has been cleared throughout Area 51 (and the satellite photos prove it), the government has allowed creosote to continue to flourish.

In fact, Area 51 may be the largest government-controlled supply of creosote in America. It’s as if they’re practically stockpiling it!

And with good reason. Because you can be certain that the U.S. government is well aware of the cancer-destroying powers of creosote.

In fact, numerous studies on its anti-cancer powers have been quietly
published on the PubMed database controlled by the National Institute of Health. This is a database of medical research from around the world that most members of the American public don’t know about.

And these studies are nothing short of remarkable. They prove that creosote can stop the spread of deadly cancer… and even kill cancer cells, starting in as little as 3 hours flat!

Research has shown that creosote attacks cancer in three different ways:

**Cancer Killing Mechanism #1:** Creosote starves your cancer cells of glucose. You see, sugar is like rocket fuel for cancer cells… and without it, they can’t live. By keeping cancer cells from using glucose, creosote makes sure they die by the millions… and FAST.

**Cancer Killing Mechanism #2:** Creosote blocks key receptors that cancer cells depend on to grow and reproduce. It’s especially effective at blocking these receptors for breast and prostate cancers.

**Cancer Killing Mechanism #3:** Creosote actually yanks apart cancer cell DNA, keeping the cells from replicating and forcing them to die.

In a 2002 lab study, researchers PROVED that a creosote extract killed cervical and pancreatic cancer cells in about as much time as it takes to watch a movie.

The extract began forcing cancer cells to commit suicide in as little as 3 hours… and by 12 hours, as many as one-third of the cancer cells were dying!

If someone you love has ever had pancreatic or cervical cancer, you know that they’re absolute killers.

The survival rate for some types of pancreatic cancer is a measly 1%… and an American woman dies of cervical cancer every 2 hours.

And creosote has also shown powerful results against breast cancer.

A quarter-million women are diagnosed with breast cancer each year… including wives, mothers, sisters, daughters, and friends that we all know.

One out of every 8 women will be diagnosed with invasive breast cancer at some point in her life… it’s practically an epidemic.
But all the way back in 2002, our government had access to a lab study from the Northwestern University Medical School… one of the top medical schools in America… that **PROVES a creosote extract kills breast cancer cells.**

The authors wrote that the extract “induced apoptosis” on breast cancer cell lines.

That means it **forced breast cancer cells to commit suicide**… and our government has had this information for 15 years!

And a 2005 study conducted by California researchers proved that creosote extract can **stop aggressive breast cancer cells from spreading**!

It actually blocks something called RTKs, which are receptors cancer cells need to survive and reproduce.

And this is just the tip of the iceberg. Researchers have shown that creosote can help fight **lung cancer, prostate cancer, skin cancer**… and more!

The secret to creosote appears to be a compound found in the plant known as nordihydroguaiaretic acid (NDGA). It’s become the subject of a great deal of research in recent years, and scientists believe it also may hold promise for treating heart disease and neurological disorders.

You can harness the power of NDGA and the amazing chaparral bush by purchasing Chaparral Liquid Extract from Hawaii Pharm at [www.hawaiipharm.com](http://www.hawaiipharm.com).
Can American “Liberty Weed” Jumpstart Your Sex Drive Again?

He was one of America’s most important founding fathers — you’ll even see his face adorning our $100 bill.

But there’s one place you’re never going to see Ben Franklin’s smiling mug or portly profile — and that’s on the cover of Men’s Health magazine.

Franklin was balding, overweight, and 70 years old when the Declaration of Independence was signed. But Franklin had a secret that left many of his peers absolutely speechless…

**He was a total sex machine, able to satisfy women decades younger!**

Franklin was reported to have bedded countless women during his senior years. And his flirtations may have even played a role in helping to secure French support during the Revolutionary War.

*Time* magazine even called him a “babe magnet.”

So what was Franklin’s secret? And how can you put it to work to enjoy the best sex of your life during your senior years?

Well, Franklin (and some other sexed-up founding fathers) may have been getting a little help.

And it came from a powerful herbal remedy known as American ginseng — or what we call “Liberty Weed.”

American ginseng is a proven libido-booster — and it looks like Franklin was no stranger to its powers.

Franklin is actually credited with introducing the American colonists to ginseng, and encouraging its cultivation. He described the plant as having “wonderful” virtues, and even Thomas Jefferson grew it on his estate.

And when it comes to giving a boost to your sexual performance, science proves that the virtues of American ginseng are wonderful, indeed.
A massive analysis published by Hong Kong researchers in 2013 found that in animal studies, ginseng was found to increase sexual activity, boost testosterone, and even increase the quality of sperm.

Talk about a triple threat!

And the powers of ginseng don’t end there.

Randomized clinical trials — a gold standard in medical research — found that American ginseng and its cousin, Korean ginseng, were effective at improving erectile dysfunction.

A study from the University of Naples in Italy concluded that ginseng, “enhances physical performance (including sexual), promotes vitality and increases resistance to stress and aging.”

Ginseng is a powerful antioxidant and is effective at controlling inflammation — and inflammation can kill both sex drive and performance fast.

Ginseng is a time-tested herbal remedy that’s been used safely for hundreds of years. If you’re looking to give yourself a boost in the bedroom, it’s a solution worth trying.

You can pick up Swanson Premium American Ginseng in 550 mg capsules at [www.swansonvitamins.com](http://www.swansonvitamins.com).
MEND Program REVERSES Alzheimer’s in 3 Months?!?

It’s the Holy Grail of the pharmaceutical industry… a magic pill that can reverse Alzheimer’s, one of the most tragic diseases of aging.

For years the largest drug companies on Earth have tried to develop an Alzheimer’s medication that works — and for years they’ve failed.

And science is now proving that there may be a very good reason for that. Because while many drugs try to attack Alzheimer’s in just one way, it turns out that the disease isn’t so simple.

The fact is, there are many contributing factors that can lead to an Alzheimer’s diagnosis — such as inflammation, dysfunction in our mitochondria (the energy centers for our cells, including brain cells), abnormal hormone levels, and much more.

If you want to beat Alzheimer’s, you need an approach that tackles all of these causes at their source. And some brilliant scientists at UCLA may have just found it.

In fact, they have now developed…

A powerful Alzheimer’s CURE that goes to work in just 3 months!

Imagine a lifetime of memories… your personality… even your ability to live independently starting to return in as little as 90 days! Picture that brain fog lifting, and being able to think clearly for the first time in ages.

It’s not just possible… it’s actually happening for people just like you, whose situations seemed completely hopeless.

These results are being delivered by something called the MEND Program, which stands for metabolic enhancement for neurodegeneration.

The program focuses on restoring metabolic and hormonal imbalances, and giving your brain the fuel it needs to operate like it did years ago.

The protocol was published by UCLA researchers in 2014, and the results are turning conventional thinking about Alzheimer’s on its head.
And it should, when you consider people like Mary, who had their lives changed by the MEND Program.

Mary was 67 years old and had been suffering serious memory problems for two years. She couldn’t perform her job and was going to have to quit — and she was even having trouble driving and navigating roads.

But after just three months on the MEND Program, her symptoms were gone!

**That’s right — memory loss completely reversed in just 90 days!**

And Mary isn’t alone. Of the 10 people studied in the UCLA research — all with varying levels of memory loss — nine experienced substantial improvements. A **90% success rate**!

The MEND Program is something you need to do under the guidance of a physician — and each program is personalized based on your lab work and other health conditions.

But there are some key elements of the program that are fairly consistent, such as:

- A prescribed diet, such as a low-glycemic or anti-inflammatory eating plan. High blood sugar and inflammation are both heavily linked to several degenerative diseases, such as Alzheimer’s. So you follow a diet designed to attack these problems.

- Optimizing sleep, using natural supplements like melatonin, as needed. The goal is to get a solid 8 hours of sleep every night. A lack of sleep is a significant contributor to cognitive decline.

- An exercise program of 30-60 minutes a day, 4-6 times a week. Regular exercise has also been proven to help reduce the risk of memory loss.

- Supplements like B12 to reduce levels of homocysteine, a major contributor to Alzheimer's.

- Prebiotics or probiotics to clear up digestive issues, which
can trigger inflammation and other autoimmune problems.

- Brain fuel, such as coconut oil. Coconut oil contains medium-chain triglycerides, which your brain can use as an alternative source of fuel if your brain cells have trouble with glucose.

- Regulating hormone levels, such as cortisol, which can contribute to cognitive decline.

MEND takes a disciplined and multi-faceted approach to treating Alzheimer’s. But because so many factors contribute to this disease, this is exactly what you need.

And while it takes some work to stick to a MEND Program, with a 90% success rate, it’s a protocol that’s well worth following.

The biggest drawback to MEND is that it’s new and many doctors may not know about it. And let’s face it — lots of mainstream docs have been practically trained to give up on Alzheimer’s patients.

But this is something you can take into your own hands. Muses Labs, out of Raleigh, NC, actually works with physicians and helps them implement the MEND Program for patients like you.

You can learn more about Muses Labs at www.museslabs.com. There’s even a place on the website where your doctor can contact a Muses Labs professional directly for more information about the program.
Miracle “Jesus Oil” Tackles Cancer, Diabetes and MORE

It’s one of the most memorable stories from the Holy Bible.

God handed down to Moses the formula for a Holy Anointing Oil—one that became a key part of both Jewish and Christian tradition.

Even Jesus Christ Himself was anointed with the oil, and was said to use it in his healing miracles.

Now, 2,000 years after the death of Jesus, this powerful oil is still performing miracles for people with hopeless cases of cancer, diabetes, and even learning disorders.

And stunned scientists are starting to admit that…

The “Jesus Oil” may be the greatest natural healing compound on Earth!

In fact, a key ingredient in this holy oil is becoming a major medical breakthrough.

In the Bible, you’ll see that one of the components of the holy anointing oil is something called kaneh-bosom. Now, researchers have discovered that kaneh-bosom is actually a type of cannabis extract.

Of course, this is where things get controversial. When many people hear of cannabis, they make a natural connection to marijuana.

But the fact is, cannabis extract has been an important natural healing compound for thousands of years.

“There can be little doubt about a role for cannabis in Judaic religion,” said Carl Ruck, professor of classical mythology at Boston University.

And there’s little doubt that high-potency cannabis oil is becoming one of the most important healing substances ever, capable of wiping away some of the worst diseases of aging.

Just ask Paul Hanson, a 65-year-old man who had been struggling with type 2 diabetes.
In August 2011, Paul weighed 215 pounds... and had a blood sugar level of 12%.

He began treating his condition with high-potency cannabis oil... and after just 7 weeks, his blood sugar levels dropped by an astounding 62%... back to NORMAL levels!

According to Paul, “My diabetes is gone! I continue to keep doing a small dose of the oil... and today the scale said 162.5 pounds. I did not change my diet, but the oil did it for me.”

Even more incredible, Paul explained that, “I was diagnosed with dyslexia as a kid. I could never spell... but for some reason I can spell 10-times better now!!”

So what’s the secret?

Well, in 1990, an organic chemist and professor of medicinal chemistry at the Hebrew University of Jerusalem — not too far from where Jesus performed HIS miracles — made one of the greatest medical discoveries of the 20th century.

His name is Dr. Raphael Mechoulam... and he identified a previously unknown regulatory system found throughout the entire human body.

It’s a God-given, built-in mechanism specifically designed to cure disease.

That’s right — your body is already wired to shut down nearly ALL diseases...

It’s called the Endocannabinoid System (or the ECS.)

To put this discovery into context, retired cardiac heart surgeon Dr. David Allen said during a recent interview that:

“The discovery of the ECS is the single most important medical discovery EVER.”

“More people will be saved by manipulation of the ECS than are currently saved by surgery... and I'm a heart surgeon saying this.”

It “performs some miraculous functions in the body... we’re finding out now that it controls diabetes... it controls cancer... it controls whether or NOT you can survive a heart attack or stroke.”
This is a system that God placed in every single human being on the planet (as well as almost all of God's creatures) as a way to naturally ward off disease.

And — as Dr. Mechoulam first discovered — high-potency cannabis oil contains over 480 natural compounds that provide the KEY to “turning-on” your body's own Endocannabinoid System!

So what happens when you use high-potency cannabis oil to turn on your body’s natural healing system?

Just ask Connie.

In 2011, Connie was diagnosed with life-threatening cancer (the same cancer that took Farrah Fawcett’s life). She was given 4… maybe 6 months to live.

Not only that, but Connie also suffered debilitating pain from a previous heart surgery AND had two spots of skin cancer on her collar bone.

Incredibly, she rejected traditional treatments like radiation and chemotherapy and turned to high-potency cannabis oil after hearing about it through her caregiver.

Within 48-hours, the oil worked to completely remove the skin cancer… then, after another two weeks, the pain in her sternum, as well as the nerve pain she’d suffered through had become “almost non-existent.”

And then she learned that — even though she never received chemotherapy or radiation — her cancer was completely gone!

Research is also showing that high-potency cannabis oil holds promise as a treatment for heart problems, seizures, and many other diseases that had once seemed hopeless.

It’s truly a miracle!

And high-potency cannabis oil is truly versatile. It can be taken orally or even as a suppository. While it does contain THC, the same psychoactive compound from marijuana, taking the oil as a suppository can erase any of THC’s unwanted effects.
Another option is to try cannabidoil (often known as CBD oil). It’s milder, while still effective in treating a variety of health conditions.

Of course, getting your hands on cannabis oil is where things can get a little trickier. There are plenty of cannabis oils sold online, but they often lack enough potency and having them shipped to you may be illegal.

Your best bet is to get high-potency cannabis oil from a state that has legalized medical cannabis. It’s illegal to transport marijuana or cannabis oil across state lines. So, depending on your condition, you may want to consider relocating.

Laws vary in each state and in Washington, DC. But, in general, you’ll need to get a medical marijuana card. That typically requires proof of residence, a qualifying condition (such as cancer, glaucoma, or multiple sclerosis) and a doctor to sign your forms.

You can find a doctor who may be willing to help at www.marijuanadoctors.com.
Can This “Virgin Mary Secret” Restore Lost Memory?

It’s been said that all the wisdom of the world can be found in the pages of the Holy Bible.

And it seems like year after year, scientists are proving this is true.

We’re learning that our Creator has filled Earth with miraculous, natural treatments for the worst diseases of aging, like dementia, heart disease, arthritis, diabetes, and even cancer.

Many of these breakthroughs can be found right in the pages of the Bible… or have connections to the most important figures in Christianity.

Earlier in this report, you learned about the MEND Program, developed at UCLA, that takes a multi-faceted approach to treating dementia and Alzheimer’s at the source.

Now, researchers believe they’ve also discovered a revolutionary, Biblically-based herb that can attack one of the greatest contributors to dementia and Alzheimer’s… and maybe even reverse years of memory loss!

It’s called milk thistle… or the “Virgin Mary Flower”…and the research behind it is leaving brain scientists and Christians absolutely speechless!

The story behind milk thistle is the stuff of legend. The plant produces a beautiful purple flower with pure white veins.

For years it’s been claimed that milk thistle got its white accents when a drop of milk from the Virgin Mary fell on the plant while she was nursing the infant Jesus. And now research has proven that…

**Milk thistle is a medical miracle, delivered straight from our Creator Himself!**

The story starts when British researchers focused on a specific family of proteins found within your cells called carbonic anhydrase I and II.

It turns out that these proteins are in far greater quantity in older
brains, and in young brains that had become sick with early onset decay and degeneration.

The more protein was present, the older the brain behaved.

What’s worse, when they injected the protein into young, healthy brains… it turned them old.

But here’s the thing — if you can target this protein, stop it from forming, and flush it from your system, you may be able to **stop degenerative diseases like Alzheimer’s and dementia right in their tracks.**

And here’s the good news — the miraculous compound that blocks the very specific forms of carbonic anhydrase is the ALL-NATURAL extract from milk thistle.

The British research team even concluded that milk thistle extract “is a good inhibitor of carbonic anhydrase forms called CA I and CA II.”

And these scientists aren’t the only ones jumping on the bandwagon as far as milk thistle… the powerful Virgin Mary Flower… is concerned. The world-renowned Mayo Clinic wrote that milk thistle extract “demonstrated a beneficial effect on people with various neurodegenerative disorders, including multiple sclerosis (MS), Parkinson’s disease, and Alzheimer’s disease.”

Plus, there’s this from the Susan G. Komen Foundation:

“Early research suggests that taking a combination supplement containing [milk thistle extract] improves mental function in people with Alzheimer’s disease.”

Improving mental function in people with Alzheimer’s disease! How many drugs on the market today can claim THAT?!?

Imagine watching brain fog lift and memories return, thanks to this powerful natural remedy! Instead of fighting against these natural treatments… given to us by our loving Creator… our government should be shouting about them from the rooftops!

But we know that with the Feds in Big Pharma’s pocket, that’s never going to happen. And that’s a shame for millions of Americans, because hundreds of studies are turning up more powerful uses for milk thistle.
Here’s what the National Cancer Institute has published on what milk thistle is capable of doing…

- Has direct anti-cancer effects against prostate, breast, colon, skin and cervical cancer…
- Boosts the regrowth of liver tissue…
- Destroys free radicals…
- Stops bone loss…
- Decreases cholesterol…
- Reduces inflammation…

You don’t need to wait for Uncle Sam to come to his senses to put milk thistle to work for you.

You can buy Puritan’s Pride 1,000 mg milk thistle extract for around $10 a month at www.puritan.com.
Imagine a world where you and your loved ones never need to worry about cancer again… one where this dreaded disease can be destroyed with something so simple (and safe) that more than a billion people cook with it.

It all may be possible, thanks to one of the most memorable — and, researchers believe, misunderstood — passages from the Holy Bible.

You’ve undoubtedly read the story of the birth of Jesus countless times, and about the gifts his family received. In Matthew 2:11 it states:

“On coming to the house, they saw the child with his mother Mary, and they bowed down and worshipped him. Then they opened their treasures and presented him with gifts of gold, frankincense and myrrh.”

But now Christian researchers believe that this age-old verse may have been misinterpreted… and, in fact, it may hold the key to…

**A medical breakthrough that DESTROYS cancer cells in as little as 24 hours flat!**

You see, the gift of “gold” may not have been gold at all, but a golden-colored spice (much more keeping with the times) known as turmeric. You see, in biblical times, people called turmeric GOLD — due to its GOLDEN color.

Turmeric is a favorite spice in Indian cuisine, and you may even have some in your cupboard right now. But turmeric, and its active ingredient curcumin, can do a lot more than add kick to your favorite dish.

In fact, Dr. Saraswati Sukumar, Ph.D., a medical oncologist at the prestigious Johns’ Hopkins University School of Medicine, says, “We have close to 300 publications that cite [turmeric] for its anti-cancer effects.”

And how well does this golden spice work for real people like you? Just ask 78-year-old grandfather Allan T. from Sarasota, Florida.

Doctors told Allan that his colon cancer was “incurable.” He was sent home to die.
In desperation, he turned to turmeric, the “Miracle of the Magi.”

Less than four months later, a hospital scan revealed Allan’s cancer had vanished.

His tumors were gone… like they never even existed in the first place.

Over the moon, he gushed, “There is no question in my mind that [it] saved my life.”

And that’s not all. According to a study published in the *British Journal of Cancer*, a turmeric extract made esophageal cancer cells in a lab “digest themselves” within 24 hours!

In fact, leading clinics all over the place are already prescribing it as treatment. Places like:

- The Advanced Rejuvenation Institute in Atlanta
- Westcoast Integrative Health in North Vancouver, Canada
- The Cancer Center for Healing in Irvine, California

There are more than 5,600 studies reviewing turmeric’s laundry list of health properties.

In fact, research confirms the “Miracle of the Magi” contains at least:

- 20 antibiotic compounds
- 14 cancer preventatives
- 12 anti-tumor compounds
- 12 anti-inflammatory compounds
- 10 antioxidant compounds

And now, some 2,000 years later, we’re only just starting to unlock turmeric’s full healing potential.

Regarding its anti-cancer effects, Bharat Aggarwal, Ph.D., at the University of Texas says, “We have not been able to find a cancer we can’t effectively treat in the laboratory.”

Dr. Joseph Maroon, M.D., a neurosurgeon at the #1 ranked hospital in
Pittsburgh, adds, “It’s similar to drugs, but with none of the side effects of drugs.”

The secret to turmeric, and the curcumin it contains, is that it blocks inflammation, the key driver of many chronic diseases — including cancer.

By blocking the main culprit of inflammatory response (something called “molecule NF-kappaB”), it shrinks cancer-causing inflammation.

The journal *Oncogene* reports it’s as effective as at least 10 anti-inflammatory drugs.

So how can you start getting your hands on this “Miracle of the Magi?” Well, adding more turmeric to your diet is a great place to start.

But you can also buy supplements with a concentrated dose of curcumin, the main active compound in turmeric. You can buy TrueCurcumin highly absorbable supplements from Nature City at [www.naturecity.com](http://www.naturecity.com)

---

**Bonus Report! The Biblical Cure: Supercharge The Magi’s Cancer Miracle by 2,000%**

If you want to use curcumin to help fight cancer, you want to make sure your body can absorb it as well as possible. Remember, if you don’t boost absorption, you may not get a potent enough dose for the curcumin to be effective.

The first tip is to take curcumin with black pepper — that's right, just old, ordinary black pepper.

That’s because black pepper contains a compound called piperine that actually enhances the absorption of curcumin. Just a quarter teaspoon of black pepper can quickly increase the bioavailability of curcumin by up to 2,000%.

There are a couple other easy ways to improve absorption of curcumin. One is to take it with fat, like whole milk or even a fish oil
supplement. The fat helps curcumin to be directly absorbed into the bloodstream, bypassing the liver where much of it may be processed and unused.

Finally, you can get curcumin by eating turmeric as a root or crushed as a powder. The natural oils in turmeric also work as fats to help your body better absorb the curcumin.
