

Timing of spawning; from mid-May to mid-June

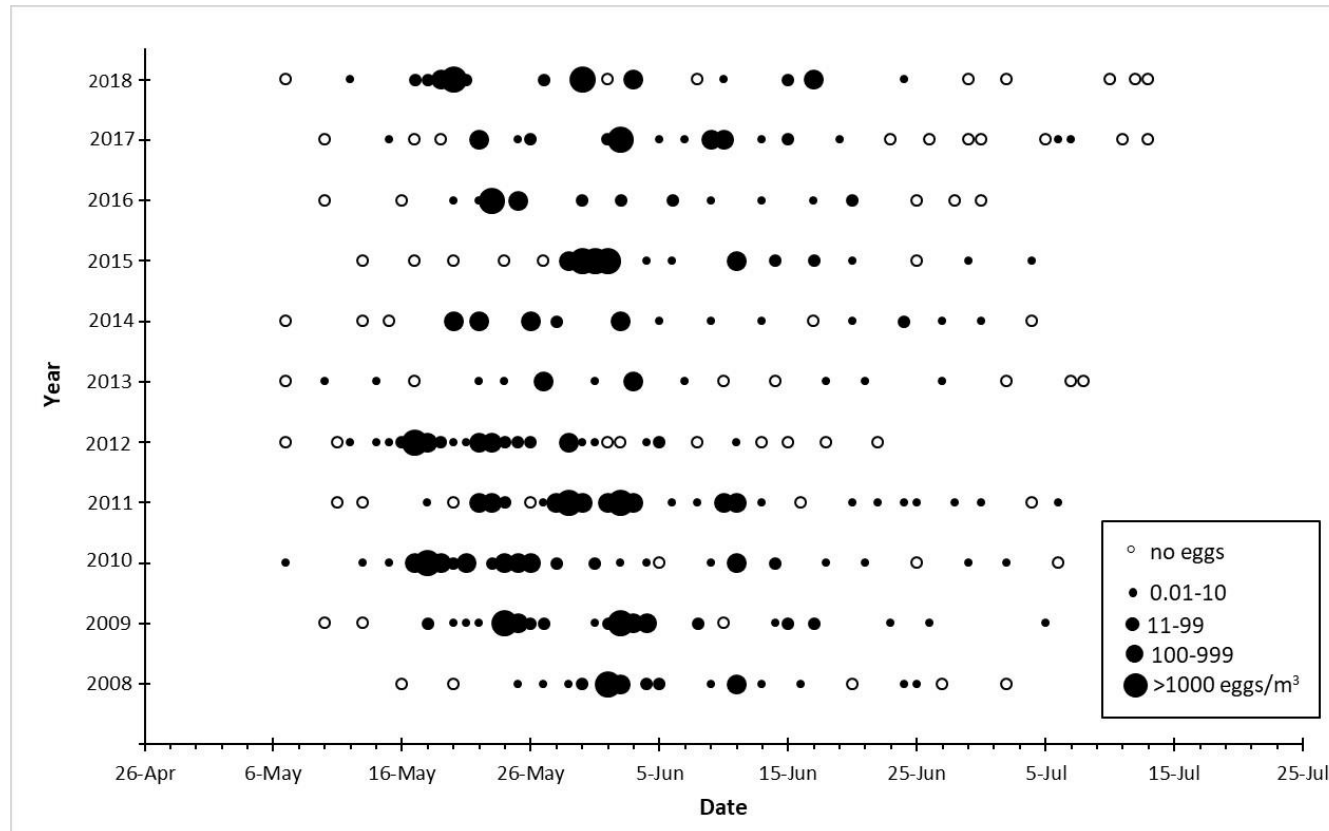

Figure 1. Timing of Striped Bass spawning over ten years indicated by daily mean egg density in the Shubenacadie River estuary. Each coordinate is a mean of between 3 and 10 plankton net tows in the main channel on either the ebb or flood tide (○ no eggs; ● 0.01-10; ● 11-99; ● 100-999; ● >1000 eggs/m³).
