Read through this year’s achievements and you may think American Rivers is a successful dam removal organization. You’re right. You may see that we’re leaders in making sure more rivers get protected under federal law. You’re right about that, too. And you may learn that we’re at the forefront of water justice in communities where people historically haven’t had a voice in decisions about flooding or clean drinking water. American Rivers is all of those things.

But all of this organization’s individual accomplishments add up to something even bigger.

American Rivers is the only national river organization working at the grassroots and in the nation’s capital to ensure a future of healthy rivers — a resource none of us can live without.

From how we respect wild places, to how we manage our finite water resources in an era of climate change, to how marginalized communities access rivers and clean water — we are changing the way Americans treat rivers and use water.

So take pride in the achievements your support made possible in 2019. None of this would be possible without your steadfast partnership. Together, we are creating a nation where everyone, regardless of who they are or where they live, has healthy rivers and clean water, forever.

For detailed stories of the change you made possible in Maryland, Montana, Colorado and more, go to AmericanRivers.org/Impact2019.
American Rivers believes every community in our country should have clean water and a healthy river. Since 1973, we have protected wild rivers, restored damaged rivers and conserved clean water for people and nature.

39 states where American Rivers protected and restored rivers, and conserved clean water

1,800+ river miles protected
15 rivers added to the Wild and Scenic Rivers System
11 dams removed
286 miles of rivers restored
4,374 miles of river habitat now open to fish and wildlife thanks to dam removal

10 cities
We are working with communities from Arizona to Ohio to reduce flooding and ensure residents have clean water and healthy rivers.

500,000 public comments gathered by Clean Water for All — a coalition of organizations, including American Rivers — in opposition to the Trump administration’s efforts to gut the Clean Water Rule

2.7 million pounds of trash removed from waterways through National River Cleanup®

weirdest finds during National River Cleanup®
rocking horse, trampoline, poker table, disco ball, cash register, blowtorch, 50-year-old Schlitz beer can

37 million lives impacted by our work to protect the drought-ridden Southwestern United States from an immediate water crisis

44 states held National River Cleanups®

American Rivers appeared in 900 news articles
These extraordinary victories for rivers across the country were made possible by your support.

FREEING RIVERS HIT A NEW HIGH. Of the 11 dams American Rivers played a part in removing last year, Bloede Dam on Maryland’s Patapsco River was the most complex. The linchpin removal in a decades-long restoration effort eliminated a drowning hazard and opened up more than 65 miles of spawning habitat for blueback herring, alewife and shad. Our advocacy and trainings have also built a powerful movement: A record number of dams have been removed in the last two years.

WILD AND SCENIC DESIGNATIONS SURGED. American Rivers is advancing toward our goal of 5,000 new protected river miles by 2020. Just months after East Rosebud Creek became Montana’s first Wild and Scenic River in 42 years, bipartisan-supported legislation permanently protected 620 miles of rivers in California, Connecticut, Massachusetts, New Hampshire, Oregon, Rhode Island and Utah.

FEDERAL POLICY EMBRACED RIVER-FRIENDLY SOLUTIONS. We helped create new avenues for dam and levee removal by securing legislation that requires the U.S. Army Corps of Engineers to consider taking out dams and restoring natural floodplains as ways to deal with under-performing infrastructure. Simultaneously, the Corps issued new guidance that will create a greater market for dam removal — the result of years of effort by American Rivers and our partners to educate federal agency and administration staff.

CLEAN WATER RULE WAS UPHeld … FOR NOW. American Rivers won a critical victory last August, when a federal court ruled in our favor, finding that the Trump administration did not comply with the law when it moved to roll back the Clean Water Rule, which protects headwater and seasonal streams. The administration has since taken new action to repeal the rule — a decision we are fighting in court.

“Our people have lived on the banks of the Gila River in Arizona for thousands of years, and we have watched as our river dwindled through overuse in the upper valley. We have known for decades that our river is in danger, so the action of American Rivers today strikes a chord with me and my people.”
— Gov. Stephen Roe Lewis, Gila River Indian Community, in response to New Mexico’s Gila River being named America’s Most Endangered River® of 2019

AMERICAN RIVERS OPENED EYES AND MINDS. America’s Most Endangered Rivers® of 2019 report garnered significant national and local media attention. Fifty years after Cleveland’s Cuyahoga River went up in flames, we named the iconic waterway “River of the Year” in recognition of the vast improvements achieved thanks to the Clean Water Act. The accolade became a national talking point and an emblem of what is possible when urban areas prioritize clean water and rivers.

KEY ACHIEVEMENTS OF 2019

PATAPSCO RIVER, MARYLAND

PATAPSCO RIVER, MARYLAND

Patapsco River restoration, over looks the restored river — a project she has worked on for 12 years.

GRAND RIVER, MICHIGAN

134 SCIENTISTS signed our letter to the U.S. Environmental Protection Agency opposing the Trump administration’s revised definition of what qualifies as Waters of the United States, which would eliminate Clean Water Act protection for many small streams and wetlands.

WHERE YOU LIVE

American Rivers’ national advocacy touches every stream in the country, while our focus on 11 priority river basins (see key below) allows us to mobilize for specific rivers most in need of our help. With your generous support, our experts boldly protect rivers that allow society and ecosystems to thrive.

WASHINGTON 1
A landmark bill authorized the initial development phase of one of American Rivers’ priority projects: the Yakima Basin Integrated Plan, a long-term plan to address climate change, water supply, river restoration and land management for farms, fish, forests and people who rely on the Yakima River.

MONTANA 2
Thanks in part to our advocacy, Montana’s Flathead National Forest unveiled a plan that will protect 22 streams, totaling 284 river miles, and over 90,000 acres of riverside lands.

CALIFORNIA 12
American Rivers is leading efforts to restore meadows in wilderness headwaters areas that provide essential spawning habitat for endemic trout and other wildlife.

ARKANSAS 10
Soon after we named Arkansas’ Buffalo National River one of America’s Most Endangered Rivers® of 2019, local groups won big when Gov. Hutchinson decided to close an industrial hog farm that has polluted 70 miles of river.

ILLINOIS 3
American Rivers organized environmental groups along with the National Association for the Advancement of Colored People to stomp out a proposal that would have eliminated oversight of flood-protection levees and worsened flooding in communities near the Mississippi River. The state is now considering ways to proactively pay for solutions that do not rely on levees.

NEW JERSEY 5
Removing a 330-foot-long dam on the Paulins Kill River and restoring floodplain opened 20 miles of stream habitat to American shad, blueback herring and American eel.

MARYLAND 6
Federal courts in Maryland and California ruled in our favor in two stormwater pollution cases. The outcome could increase the amount of green infrastructure to reduce polluted stormwater runoff from streets and parking lots.

GEORGIA 9
Our new report, “Ensuring Water Security for People and Nature,” identifies critical next steps to combat climate change and overuse on the upper Flint. Solutions include helping communities be more water efficient and persuading reservoir operators to let more water flow downstream.
