

Meghan Marlowe is a junior at the University of Arizona majoring in Biosystems Engineering. After graduation, she plans on pursuing a master's in engineering and using her education to go into the water resources field. In that industry, Meghan wants to work either in large cities with their water collection systems or on irrigation for large plots of agricultural land. On campus, she is a part of Engineers Without Borders where the club works on irrigation projects to help a community in Arizona and another in the Dominican Republic. Meghan also works in an USDA research lab that focuses on food safety by analyzing DNA samples of a pathogenic fungi and developing products to help farmers around the world protect their crops.
