

Figure 1. In vitro PSMA-1-ICG specific binding to PSMA positive prostate cancer cells PC3-pip, but not PSMA negative cells PC3-flu.

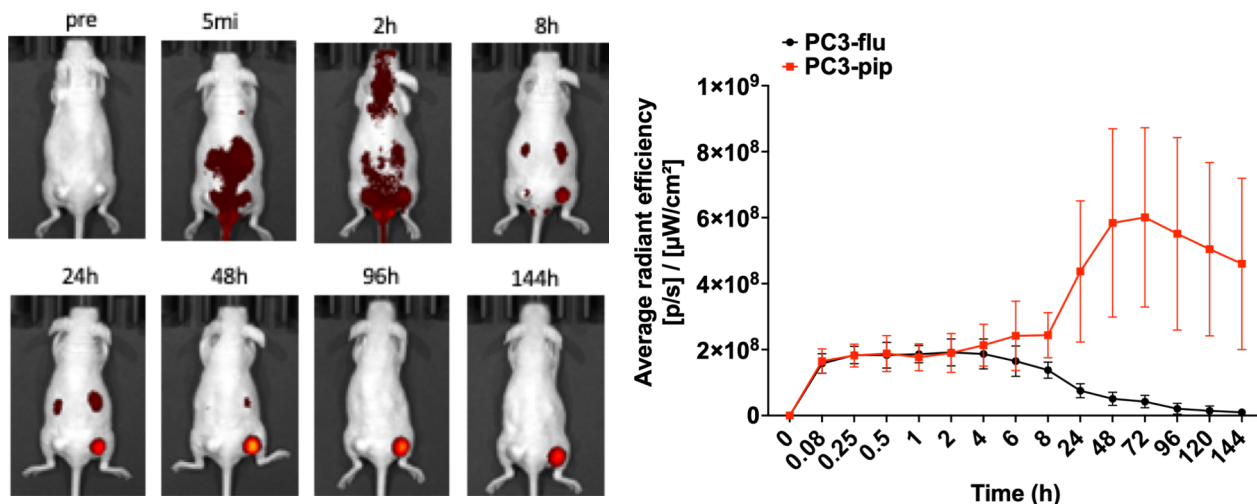

Figure 2. In vivo PSMA-1-ICG uptake specifically by PSMA positive PC3-pip tumors, but not PSMA negative PC3-flu tumors.

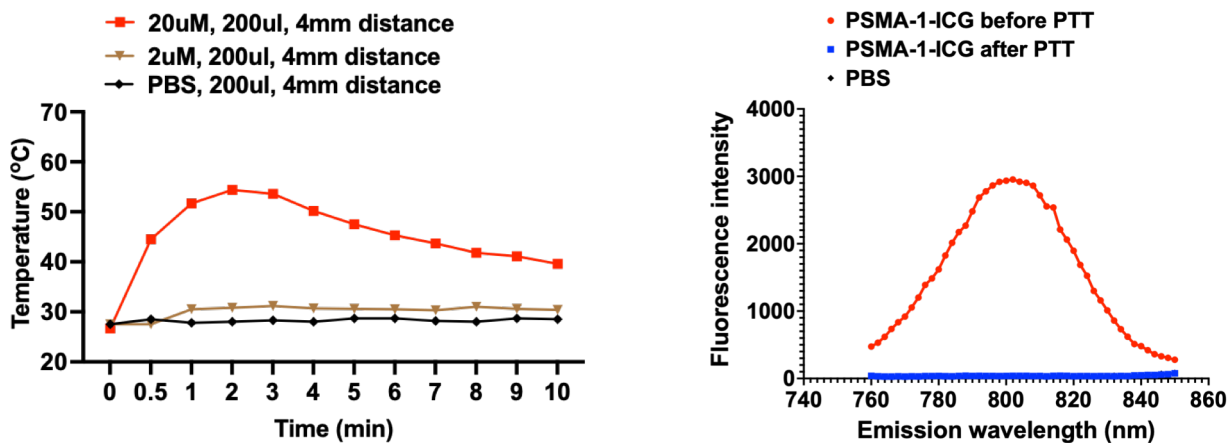

Figure 3. In vitro PSMA-1-ICG generates heat under light stimulation. The highest temperature reached 54°C.
