How to Use This Book	iii
----------------------	-----

Acknowledgements	vii
------------------	-----

1	Review of Counting & Probability Basics	1
1.1	Introduction	1
1.2	Basic Counting Techniques	2
1.3	Basic Probability Techniques	11
1.4	Expected Value	18
1.5	Pascal's Triangle and the Binomial Theorem	20
1.6	Summation Notation	25
1.7	Summary	26

2	Sets and Logic	27
2.1	Introduction	27
2.2	Sets	28
2.3	Operations on Sets	33
2.4	Truth and Logic	37
2.5	Quantifiers	43
2.6	Summary	46

CONTENTS

3	A Piece of PIE	49
3.1	Introduction	49
3.2	PIE With 2 Properties	49
3.3	PIE With 3 Properties	54
3.4	Counting Problems With PIE	58
3.5	PIE With Many Properties	65
3.6	Counting Items With More Than 1 of Something	68
3.7	Some Harder PIE Problems	73
3.8	Summary	79

4	Constructive Counting and 1-1 Correspondences	83
4.1	Introduction	83
4.2	Some Basic Problems	84
4.3	Harder Constructive Counting Problems	86
4.4	1-1 Correspondence Basics	94
4.5	More Complicated 1-1 Correspondences	99
4.6	Clever 1-1 Correspondences	105
4.7	Summary	114

5	The Pigeonhole Principle	118
5.1	Introduction	118
5.2	It's Just Common Sense!	118
5.3	Basic Pigeonhole Problems	119
5.4	More Advanced Pigeonhole Problems	122
5.5	Summary	127

6	Constructive Expectation	130
6.1	Introduction	130
6.2	Basic Examples	131
6.3	Summing Expectations Constructively	135
6.4★	A Coat With Many Patches (Reprise)	140
6.5	Summary	142

7	Distributions	145
7.1	Introduction	145
7.2	Basic Distributions	146
7.3	Distributions With Extra Conditions	149
7.4	More Complicated Distribution Problems	154
7.5	Summary	158

8	Mathematical Induction	161
----------	-------------------------------	------------

9	Fibonacci Numbers	172
9.1	Introduction	172
9.2	A Motivating Problem	172
9.3	Some Fibonacci Problems	175
9.4	A Formula for the Fibonacci Numbers	183
9.5	Summary	189

10	Recursion	192
10.1	Introduction	192
10.2	Examples of Recursions	193
10.3	Linear Recurrences	200
10.4	A Hard Recursion Problem	204
10.5	Problems Involving Catalan Numbers	206
10.6	Formulas for the Catalan Numbers	216
10.7	Summary	222

11	Conditional Probability	227
11.1	Introduction	227
11.2	Basic Examples of Conditional Probability	227
11.3	Some Definitions and Notation	230
11.4	Harder Examples	232
11.5	Let's Make a Deal!	238
11.6	Summary	241

CONTENTS

12	Combinatorial Identities	243
12.1	Introduction	243
12.2	Basic Identities	243
12.3	More Identities	254
12.4	Summary	261

13	Events With States	265
13.1	Introduction	265
13.2	State Diagrams and Random Walks	266
13.3	Events With Infinite States	277
13.4	Two-player Strategy Games	284
13.5	Summary	294

14	Generating Functions	298
14.1	Introduction	298
14.2	Basic examples of Generating Functions	299
14.3	The Binomial Theorem (as a Generating Function)	305
14.4	Distributions (as Generating Functions)	307
14.5	The Generating Function for Partitions	314
14.6★	The Generating Function for the Fibonacci Numbers	325
14.7	Summary	327

15	Graph Theory	331
15.1	Introduction	331
15.2	Definitions	332
15.3	Basic Properties of Graphs	334
15.4	Cycles and Paths	342
15.5	Planar Graphs	349
15.6	Eulerian and Hamiltonian Paths	354
15.7	Summary	360

16	Challenge Problems	363
-----------	---------------------------	------------

References	366
Hints to Selected Problems	367
Index	383
