0, see zero
1, see one

abundant numbers, 116

algebra
  number sense, 287–291

algebraic number theory, 282

AMC, ix

American Mathematics Competitions, see AMC

American Regions Math League, see ARML

ARML, x

art, see culture

Art of Problem Solving, vii, 320

base
  number systems, 146

base 10, see decimal number system

base number arithmetic, 165

base number systems, 144
  addition of base numbers, 165–167
  commonly used, 148
  converting between bases, 150–154
  creative problem solving, 155–160
  division of base numbers, 172–174
  fractions and conversion, 209–211
  multiplication of base numbers, 170–172
  subtraction of base numbers, 168–170
  units digit arithmetic, 184–186

Benford’s Law, 194

Bhargava, Manjul, 282

binary, 147

Clay Mathematics Institute, 140

codes, 63

commerce
  mathematical development, 3

common divisors, 39–40

common multiples, 43

complementary counting, 96

composite numbers, 25–27
  identifying, 28–32

congruence, 221

congruence classes, see residue classes

conjecture, 110, 111

converting base numbers, see base number systems

Conway, John, 282

coprime, see relatively prime

counting
  addition as fast counting, 4
  bundles, 141–144
  exponentiation as fast counting, 5
  multiplication as fast counting, 5
  subtraction as fast counting, 4

counting numbers, 2

cryptography, 63
  Caesar cipher, 86
  Enigma, 89, 90
  scytales, 81

cubes of integers, see perfect cubes

culture
  Renaissance, art, and mathematics, 3

da Vinci, Leonardo, 3

decimal number system, 143

decimals
  converting to fractions, 205–208
  repeating, 201–205
  terminating, 195–200

deficient numbers, 116

dividend, 48

divisibility, 11–13
number sense, 283–287
divisibility rules
  algebraic problem solving, 255–257
  common rules, 247–254
divisible, 12
Division Algorithm, 48
Division Theorem, 48, 60
divisors, 14–18
  counting game, 106
  counting problems, 94–100
  divisor products, 101
  how to count them, 91–94
  making use of, 18–19
  negative, 15
  proper, see proper divisors

Egyptian fractions, 75
Enigma, see cryptography
equivalence, see congruence
equivalence classes, see residue classes
Eratosthenes, 31
Euclid, 42, 55, 57
Euclidean algorithm, 53–60
Euler, Leonhard, 246
extended Euclidean algorithm, 59

factor, 14
factor trees, 64–68
  game, 64
factorials, 111
  factoring, 113
factoring
  common techniques, 128
  equating algebraic and prime factorizations, 128, 131
  number sense, 283–287
  Simon’s Favorite Factoring Trick, 130
factors, see divisors
Fermat primes, 111
Fermat’s Last Theorem, 135
Fermat, Pierre de, 110, 111, 135
Fibonacci, 124
Fibonacci numbers, 124
forms of numbers
  fractions and decimals, 197, 213
  number sense, 292–293

Fundamental Theorem of Arithmetic, 68
Gauss, Carl Friedrich, 220, 239, 282
GCD, see greatest common divisor
GCF, see greatest common divisor
generalized forms, 133
Germain, Marie-Sophie, 239
Goldbach’s conjecture, 302
greatest common divisor, 41
greatest common factor, see greatest common divisor
guessing, see problem solving strategies
Harvard-MIT Math Tournament, see HMMT
hexadecimal, 149
HMMT, x

incongruent, 242
induction, 237
integers, 1
  counting with, 2
  making integers out of integers, 3–6
  negative, 1
  on the number line, 1
  positive, 1
  solving algebra problems, 125–136
  zero, see zero
inverse, 264
irrational numbers, 204
isolating the variable, 136

Lagrange, Joseph-Louis, 281
LCM, see least common multiple
least common multiple, 44
Legendre, Adrien-Marie, 239, 246
linear congruence equations, 261
lists, see problem solving strategies
lowest terms, 76

Mandelbrot Competition, ix
MATHCOUNTS, ix
Mersenne primes, 110, 117
Mersenne, Marin, 110
Millenium Problems, 140
modular arithmetic, 217–223
  addition and subtraction, 227–232
  algebra, 231, 237

Copyrighted Material
