

DELIVER EXTREMELY CLEAN WATER TO YOUR ULTRASONIC HUMIDIFICATION EQUIPMENT

Ultra Pure Systems Deionization Exchange (DIEX) cabinet uses a three stage process to remove harmful substances such as heavy metal ions and total dissolved solids from standard city water. This process will convert city water to a stable 0-2 PPM suitable for Ultrasonic Humidification.

Neatly packed in a 100% aluminum, light weight and corrosion resistant cabinet with single point user connection for many DI applications. At a glance, you can be assured with our bright LED display, quality DI water is protecting your investment. If a problem occurs, display turns RED, accompanied by an audible alarm.

Optimize your system's performance with our unique Query Code System. A simple, friendly, powerful, no cost mobile application for customers to manage routine maintenance from anywhere on-site or remotely.

Benefits:

- Eliminate system shut down due to consumed DI Resin
- Automatically generate email notifications when DI needs changed
- Live factory support and tutorials
- Predictable data budgeting DI costs
- No contracts or licensing fees required
