Arrowsight Medical™ Introduces Hospital Video Audits *New Service Enables Improved Safety Protocols, Clinical and Non-Clinical Compliance*

Mt. Kisco, NY (October 26) -- Arrowsight, Inc., the leading developer of remote viewing services and software, has introduced Arrowsight Medical™, an innovative and affordable new service for achieving best practices and reducing medical errors in hospitals.

Arrowsight Medical™ introduces an ongoing system of video-based assessments and audits for monitoring quality improvement and patient-safety processes. The audits cover adherence to a wide range of clinical and non-clinical processes including hand-hygiene guidelines, central line safety, alarm-response timeliness, ventilator safety and surgical-infection prevention.

Arrowsight CEO Adam Aronson said, "Arrowsight Medical seeks to help hospitals improve patient safety, raise the benchmark of multiple quality of care indicators and reduce costs. The service enables physician and nursing leaders and hospital administrators to improve best practices, minimize errors and reduce risk within hospital environments."

Alan Lisbon, Vice Chair for Critical Care, Department of Anesthesia and Critical Care, Beth Israel Deaconess Medical Center and Associate Professor of Anaesthesia, Harvard Medical School in Boston, Mass., added, "Video monitoring and audit reports provide us with safety-critical data that have, until now, been inaccessible using conventional approaches. This is a tool that will enable us to perform ongoing safety assessments and audits on high-risk clinical processes like line insertion, ventilator care, alarm response, isolation procedures, and other infection-control issues -- all major safety concerns for hospitals."

Arrowsight Medical™ provides administrators and staff with daily, weekly and monthly audit reports that measure compliance at critical areas in the hospital. The service also enables continuous monitoring of performance on safety protocols and procedures, enhances compliance with safety protocols and procedures, and solves the pressing need for consistent, reliable and sustainable data collection on clinical processes of care to meet requests of outside regulators and reporting agencies.
