PRESENTER BIO

Jason Travers, PhD, BCBA-D, is an assistant professor in the University of Kansas Department of Special Education. Travers earned his doctorate at University of Nevada Las Vegas and is a former public school special educator for learners with autism spectrum disorder (ASD). He researches the effects of shared active surface technology on academic, communicative, and social-behavioral skills of learners with ASD. Additional research interests include trends in racially disparate identification of students in the autism eligibility category, equitable access to early intervention, comprehensive sexuality education for learners with ASD, and evidence-based practices in special education.
