©2015 Gale Banks Engineering
Banks iQ System  
(P/N 61151-61152)  
- 5” touchscreen interface that can control the Banks Diesel Tuner and/or SpeedBrake on the fly.  
- Interchangeable gauge display, read and clear codes, monitor engine diagnostics, log data, time your vehicles runs and much more.

Banks Ram-Air Intake System  
(P/N 42155, Oil) (P/N 42155-D, Dry)  
- Increases your airflow over stock.  
- Adds power, improves fuel economy, lowers EGTs and reduces smoke.

High-Ram Intake  
(P/N 42750-42751)  
- Increases flow and provides more uniform air distribution to the engine for more available power at a given boost level.

Banks Techni-Cooler® System  
(P/N 25974-25975)  
- Provides increased air flow to the engine by increasing air density for more increased power, lower EGTs and improved fuel economy.

Banks Brake  
(P/N 55467-55468)  
- Increases the stopping power of your truck and extends the service life of your brakes

Banks Billet Torque Converter  
(P/N 72522)  
- Higher torque capacity over stock  
- Lockup clutch is slip-resistant so transmission fluids stay cooler and transmission life is prolonged.
Banks SpeedBrake  
**iQ Compatible (P/N 55455-55456)**  
**PDA Compatible (P/N 55457-55458)**  
- Allows for controlled hill decent at a user defined vehicle speed.

**Boost and Pyro Gauges (P/N 64507)**  
- Keep your engine safe by monitoring vital engine parameters

**Banks Bullet (P/N 66524-66525)**  
- Adds power safely to your vehicle  
- Displays critical engine functions  
- Engine safeguards  
- Change power levels on-the-fly

**Banks Diesel Tuner**  
**Six-Gun w/ switch (P/N 61023)**  
**Six-Gun w/ iQ (P/N 63749)**  
**EconoMind w/ switch (P/N 63743-63745)**  
**EconoMind w/ iQ (P/N 63747-63748)**  
- Adds power safely to your vehicle  
- Engine and transmission safeguards  
- Change power levels on-the-fly

**Thermocouple**  
- Add a temperature limiting function to your Diesel Tuner

**AutoMind Programmer (P/N 66110)**  
- Contains Banks tunes that boost your vehicles HP, Torque and MPG.  
- Displays a host of critical engine functions  
- Provides “service technician” diagnostic capabilities  
- Has upgradeable functionality, so it will never be out of date

---

**Banks Stinger Systems (P/N 46465-46486)**  
**Contains:**  
- Ram-Air Intake system  
- Monster Exhaust  
- EconoMind Tuner w/ Banks iQ

**Banks PowerPack Systems (P/N 46497-46519)**  
**Contains:**  
- Ram-Air Intake system  
- Monster Exhaust  
- EconoMind Tuner w/ Banks iQ  
- High-Ram  
- Techni-Cooler System

**Banks Six-Gun Bundle (P/N 46594-46613)**  
**Contains:**  
- Ram-Air Intake system  
- Monster Exhaust  
- Six-Gun Tuner w/ Banks iQ

**Banks Big Hoss Bundle (P/N 46623-46643)**  
**Contains:**  
- Ram-Air Intake system  
- Monster Exhaust  
- Six-Gun Tuner w/ Banks iQ  
- High-Ram  
- Techni-Cooler System
Dear Customer,

If you have any questions concerning the installation of your Banks Power System, please call our Technical Service Hotline at (888) 839-2700 between 7:00 am and 4:00 pm (PT). If you have any questions relating to shipping or billing, please contact our Customer Service Department at (888) 839-5600.

Thank you.

1. Before starting work, familiarize yourself with the installation procedure by reading all of the instructions.

2. The exploded view (Figure 1, pages 6-7) provides only general guidance. Refer to each step and section diagram in this manual for proper instruction.

3. Throughout this manual, the left side of the vehicle refers to the driver’s side, and the right side to the passenger’s side.

4. Disconnect the negative (ground) cable from the battery (or batteries, if there are two) before beginning work.

5. Route and tie wires and hoses a minimum of 6” away from exhaust heat, moving parts and sharp edges. Clearance of 8” or more is recommended where possible.

6. When raising the vehicle, support it on properly weight-rated safety stands, ramps or a commercial hoist. Follow the manufacturer’s safety precautions. Take care to balance the vehicle to prevent it from slipping or falling. When using ramps, be sure the front wheels are centered squarely on the topsides. When raising the front of the vehicle, put the transmission in park (automatic) or reverse (manual), set the parking brake, and block the rear wheels. When raising the back of the vehicle, be sure the vehicle is on level ground and the front wheels are blocked securely.

CAUTION! Do not use floor jacks to support the vehicle while working under it. Do not raise the vehicle onto concrete blocks, masonry or any other item not intended specifically for this use.

7. During installation, keep the work area clean. Do not allow anything to be dropped into intake, exhaust, or lubrication system components while performing the installation, as foreign objects will cause immediate engine damage upon start-up.

Tools Required:
- 1/2” and 3/8” drive ratchets with inch and metric sockets and 1/2” and 3/8” drive extension
- Inch and metric combination or open-end wrenches
- Standard screwdriver
- Clean shop towels or rags
- Pry-bar
- Reciprocating saw
- Inch-pound and foot-pound torque wrenches
- Penetrating oil or light lubricant spray
- Transmission jack (manual transmission)
1. Disconnect the negative (ground) cable from the battery (if there is more than one battery, disconnect both negative cables). Secure the cable so it cannot accidentally come in contact with the post.

2. Raise the vehicle and support it securely with properly weight-rated safety stands, ramps or a commercial hoist. Take care to balance the vehicle to prevent it from slipping or falling. When using ramps, be sure the wheels are centered squarely on the topsides. Place the transmission in park (automatic) or reverse (manual), set the parking brake and securely block the wheels that are on the ground.

**CAUTION:** Do not work under any vehicle supported only by a jack. Severe injury may result.

**WARNING!** The following step may require the use of a torch and/or saw. Proper safety equipment should be used. Failure to use proper safety equipment may result in severe injury.

3. From under the vehicle, remove the factory exhaust system from the catalytic converter back. Starting at the rear of the vehicle, remove each component by either cutting through the pipe near the clamps or by removing the clamps and heating the joints with an Oxy-Acetylene torch to allow crimped pipes to separate. **DO NOT CUT OR DAMAGE CATALYTIC CONVERTER TUBING DURING THE REMOVAL PROCESS.** To assist in removal, the turbine outlet pipe (T.O.P.) should be cut before the transmission if it is going to be replaced. Remove the hanger pins from the rubber hangers with a pry bar. (Spray lubricant will ease hanger removal.)

4. Remove the two (2) nuts attaching the T.O.P. to the catalytic converter inlet. Loosen and remove the band clamp that attaches the rear intermediate pipe to the catalytic converter outlet. Remove the catalytic converter assembly from the vehicle. Remove the band-clamp that attaches the T.O.P. to the turbocharger and remove the factory T.O.P. from the vehicle. Retain V-band clamp for re-assembly.

**NOTE:** To assist in T.O.P. removal, remove the rear engine hoist hook by removing the two (2) Hex screws and remove the valve cover heatshield. The dipstick tube may also be removed or slightly bent to allow for T.O.P. removal/installation. Retain all hardware and parts for reassembly.

**For Manual Transmissions only:** The transmission will need to be lowered to allow for removal and installation of the T.O.P. Using a transmission jack, support the rear of the transmission to allow working room for the T.O.P. and remove the rear transmission mount and crossmember. Remove the Front drive shaft support bracket from the cab. Lower the transmission 4-6” and remove the factory T.O.P.

The transmission may need to be raised before the Banks T.O.P. is installed. Install the Banks Upper and lower T.O.P. Raise the transmission and reinstall drive shaft bracket, transmission crossmember and rear transmission mount. Refer to vehicles owners manual for factory Torque Specifications.

5. Loosely place the factory V-band clamp on the Banks Upper T.O.P. Install the Banks Upper T.O.P. to the turbine housing. Loosely snug the V-band clamp assuring the T.O.P. is aligned properly.

* Crew-Cab Long-Bed models contain three (3) 4” exhaust clamps.
** Crew-Cab Short-Bed only
*** Long-Bed only
6. Locate the supplied 3½” Exhaust band clamp and install it at the inlet of the lower T.O.P. Install the lower T.O.P. onto the Upper T.O.P. Loosely snug the band clamp.

**NOTE:** Reinstall the engine hoist hook and valve cover heat shield if previously removed.

7. The catalytic converter inlet will need to be trimmed to accommodate the Banks exhaust system. Be careful not to trim an excessive amount of tubing. **Be sure to wear proper safety equipment.**

**IMPORTANT:** Diesel catalysts may become plugged with soot which can restrict exhaust flow, impeding performance. Inspect the converter by shining a powerful flashlight into the inlet. Observe the light through the other end of the converter. The full circle of the flashlight should be visible without any blockage in the gridwork of the catalyst.

If excessive soot is observed, the catalyst may need to be cleaned. **TAKE PRECAUTIONS to avoid lowing soot toward the work area or where it could be inhaled. ALWAYS use breathing protection. Also inspect the catalyst for damage (i.e. chips, bent corners, etc.) to the gridwork. If your catalytic converter is damaged, it may be covered under your vehicle’s emissions warranty.**

A) With the catalytic converter removed from the vehicle and the headpipe removed from the converter, measure approximately 4” from the weld and mark the location (this location should be before any bend, about 7” rear of the inlet flange). Using a reciprocating saw or equivalent, vertically cut and remove 7” from the converter outlet tubing (see Figure 2).

B) Install the supplied Banks front intermediate pipe onto the previously installed Banks T.O.P. Loosely install a supplied 4” exhaust clamp onto the forward end of the front intermediate pipe.

C) Install the supplied 3½” clamp onto the outlet of the front intermediate pipe. Place the trimmed catalytic converter onto the previously installed front intermediate pipe. Loosely snug the clamp onto the catalytic converter inlet.

---

![Figure 2](image-url)
8. Place a supplied 3½” clamp onto the front of the supplied rear intermediate pipe.

NOTE: Review the Parts List Table on page 11 to verify the rear intermediate pipe P/N.

9. Install the supplied rear intermediate pipe onto the catalytic converter outlet. Be sure the notch and catalytic converter pin are properly aligned. Lightly snug the 3½” clamp onto the front of the intermediate pipe / catalytic converter outlet.

For crew-cab long-bed models, install the supplied extension pipe onto the intermediate pipe and snug a supplied 4” clamp onto the connection.

NOTE: Exhaust clamps should be placed at the beginning of the slot and evenly tightened.

10. For crew-cab long-bed, extended-cab short bed, and extended-cab long-bed models, it is necessary to relocate the factory-installed frame-mounted hanger pin that is located behind the rear transmission crossmember.

A) Remove the two (2) factory nuts that mount the front muffler hanger pin to the frame rail and remove the hanger pin from the vehicle.

NOTE: Extended cab short bed models will NOT use the two (2) 3/8” spacers.

B) Re-install the frame mounted hanger pin using the two (2) 3/8” long steel spacers onto the factory exhaust hanger studs. Install the hanger/spacer assembly into the vehicle frame holes about 10-16” to the rear of the original muffler hanger location (see Figure 3).

NOTE: spacers are to be installed between the hanger pin and the inside of the frame rail. Torque factory nuts to 20 ft-lbs.
11. For crew-cab short-bed models, it is necessary to replace the factory-installed frame-mounted hanger pin that is located behind the rear transmission crossmember.

A) Using a pry bar, completely remove the rubber hanger from the front muffler hanger pin. Remove the two (2) factory nuts on the front muffler hanger pin from the frame rail and remove the hanger pin from the vehicle. Retain the rubber hanger for re-assembly.

B) Install the supplied hanger pin to the vehicle frame about 10-16” to the rear of the original muffler hanger location (see Figure 3). Install the supplied bolts and washers into the hanger plate and through the frame. Install the supplied nuts and torque to 20 ft-lbs (27 N*m).

C) Reinstall the rubber hanger onto the mounted hanger pin assembly.

12. Install the single pin front hanger clamp onto the rear of the intermediate pipe with the hanger pin on the inside facing the muffler. Insert the hanger pin into the vehicle’s rubber grommet. Install the inlet of the Banks Monster muffler to the intermediate pipe.

13. For F-series Trucks, install the dual pin rear hanger clamp onto the outlet of the Monster muffler with the hanger pins on the inside, facing the muffler. For Excursions, install the rear hanger clamp with the pins facing to the rear of the vehicle. Insert the two hanger pins into the vehicle’s rubber grommets.

14. Route the Front tailpipe over the rear axle housing and into the muffler outlet. Loosely snug the 4” hanger clamp onto the muffler outlet.

15. Install a 4” exhaust clamp on the inlet of the Rear tailpipe. Install the

Figure 4

HANGER ANGLE SHOULD ALLOW PIPE TO EXPAND TOWARD REAR OF VEHICLE

DIRECTION OF PIPE EXPANSION

REAR OF VEHICLE
rear tailpipe onto the front tailpipe. Install the rear tailpipe hanger pin into the corresponding rubber hanger. Loosely snug the 4” exhaust clamp.

16. Install the 5” Monster tailpipe tip on the exhaust. Keep the wrapping on until installation is complete. The tip should be rotated so the clamp nut is pointing down. Align the end of the tip with the body line of the truck.

17. With everything positioned properly, begin to tighten the clamps starting with the ones closest to the front and working your way back. Torque the exhaust clamps evenly to 35 ft-lbs (47 N*m). Make sure that each slip is fully inserted (+/- 1/4 inch) and that all mount hangers are in the forward position (see Figure 4).

18. Remove the protective covering from the tailpipe tip.

CAUTION: The protective covering may ignite and burn if not removed prior to running the engine.

19. Your system includes two “Banks Power” logos designed to complement the Ford badging on your truck. Use the provided measurements (see Figure 5) to position the logos for a clean factory look.

20. Re-connect negative battery cable(s). Start the engine and listen for exhaust leaks. Tighten the exhaust clamps as necessary. Whenever possible, tack-welding slip connections to prevent disengagement is recommended. Your Banks Monster Exhaust installation is now complete.
