General Installation Practices

1. Before starting work, familiarize yourself with the installation procedure by reading all of the instructions.

2. The exploded view (Figure 1) provides only general guidance. Refer to each step and section diagram in this manual for proper instruction.

3. Throughout this manual, the left side of the vehicle refers to the driver’s side, and the right side to the passenger’s side.

4. Disconnect the negative (ground) cable from the battery (or batteries, if there are two) before beginning work.

5. Route and tie wires and hoses a minimum of 6” away from exhaust heat, moving parts and sharp edges. Clearance of 8” or more is recommended where possible.

6. When raising the vehicle, support it on properly weight-rated safety stands, ramps or a commercial hoist. Follow the manufacturer’s safety precautions. Take care to balance the vehicle to prevent it from slipping or falling. When using ramps, be sure the front wheels are centered squarely on the topsides; put the transmission in park; set the hand brake; and place blocks behind the rear wheels.

Caution! Do not use floor jacks to support the vehicle while working under it. Do not raise the vehicle onto concrete blocks, masonry or any other item not intended specifically for this use.

7. During installation, keep the work area clean. Do not allow anything to be dropped into intake, exhaust, or lubrication system components while performing the installation, as foreign objects will cause immediate engine damage upon start-up.

Tools Required:

- 1/2” and 3/8” drive ratchets with standard and metric sockets and 1/2” and 3/8” drive extension
- Standard and metric combination or open-end wrenches
- Standard screwdriver
- Clean shop towels or rags
- Pry-bar
- Reciprocating saw

Highly recommended tools and supplies:

- Foot-pound torque wrench
- Penetrating oil or light lubricant spray
- Oxy-acetylene torch

Monster Exhaust System
Installation

1. As a precaution, disconnect the ground of the battery (if there is more than one battery, disconnect both).

2. Raise the vehicle and support it with properly weight rated safety stands, ramps or a commercial hoist. Follow the manufacturer’s safety precautions. Take care to balance the vehicle to prevent it from slipping or falling. When using ramps, be sure the front wheels are centered squarely on the topsides; place the transmission in park; set the parking brake and place blocks behind the rear wheels.

   CAUTION: DO NOT WORK UNDER ANY VEHICLE SUPPORTED ONLY BY A JACK. SEVERE INJURY MAY RESULT.

3. Removal of the factory exhaust can be simplified by cutting the factory exhaust pipe behind the muffler. This will allow the tailpipe to be removed as a separate piece.

4. For 2006-2007 models, remove the clamp located on the catalytic converter outlet.

5. For 2001-05 models, remove the four (4) nuts from the factory exhaust flange located at the back side of the factory head pipe (retain for re-use).

6. Remove the factory tailpipe from the vehicle by disengaging the exhaust system hanger pins from the rubber hangers using a large screw-driver or pry bar.

   Note: Lubricating the rubber hangers with WD-40 or similar lubricant will ease removal of the hanger pins.

7. Remove the factory muffler from the vehicle by disengaging the hanger pins from the rubber hangers using a large screwdriver or pry bar.

   NOTE: proceed to step 14 for 2006-2007 models installation instructions

CAUTION: The following step involves cutting a stainless steel tube. Safety glasses should be worn during any cutting operation and care should be taken to avoid injury due to sharp edges and burrs.

8. For Extended Cab Long Bed and Extended Cab Short Bed 2001-2005 models only:

   Cut the Banks Flanged intermediate pipe (53717) based on the following configurations. See Table 1. Cut the Non-flanged end of the intermediate pipe. See Figure 2.

9. Install the Banks flanged intermediate pipe and 4-bolt gasket onto the headpipe. Loosely assemble with the four (4) factory nuts. Slide the Banks 4-inch band clamp on the outlet of the Banks 4-bolt flange pipe.

10. For 2006-2007 models, install a 3 1/2” saddle clamp onto the catalytic converter outlet.

11. For one-piece intermediate pipe, insert the intermediate pipe inlet onto the flanged intermediate pipe or catalytic converter outlet. Install the intermediate pipe hanger pin(s) into the vehicle rubber hangers.

   For two-piece intermediate pipe, insert the Front intermediate pipe inlet onto the factory catalytic converter outlet. Loosely tighten the 3.5” clamp to secure the Front intermediate pipe. Install a 4” clamp on the outlet of the Front intermediate pipe outlet. Insert the Rear intermediate pipe inlet into the Front intermediate pipe outlet. Install the intermediate pipe hanger pin(s) into the vehicle rubber hangers. Loosely tighten the 4” clamp to secure the Rear intermediate pipe.
NOTE: Once the pipe has been completely engaged in the slip joint, it should be marked with a marker, scribe or tape for reference when tightening clamps later in the installation. Each slip joint in the system should be marked in this fashion. When the exhaust system is being adjusted to align the hangers, the slip joints can be adjusted so that the reference mark is no more than 1/4” away from its original position.

12. Slide one (1) of the supplied 4-inch exhaust clamps over the Banks Rear intermediate pipe.

*See Table 1 for cutting length*

**NOTE:** Once the pipe has been completely engaged in the slip joint, it should be marked with a marker, scribe or tape for reference when tightening clamps later in the installation. Each slip joint in the system should be marked in this fashion. When the exhaust system is being adjusted to align the hangers, the slip joints can be adjusted so that the reference mark is no more than 1/4” away from its original position.

**12.** Slide one (1) of the supplied 4-inch exhaust clamps over the Banks Rear intermediate pipe.

**Note:** On extended-cab long-bed and crew-cab long-bed vehicles, the clamp that is used between the intermediate pipe and muffler is a combination hanger/clamp. When this hanger clamp is installed the hanger pin should be inserted into the factory rubber hanger and the clamp should be rotated until the hanger pin is parallel with the frame mounted pin before being torqued.
13. Install the muffler onto the end of the intermediate pipe outlet. Be sure that the inlet side of the muffler (see markings on muffler body) is facing toward the front of the vehicle. Orient the muffler such that the “Banks Monster” logo is facing towards the frame and is level with the ground. Verify that the muffler and intermediate pipe are completely engaged.

14. Slide one (1) of the supplied 4” exhaust clamps onto the Banks Monster muffler outlet.

15. Install the Front tailpipe into the outlet of the muffler. Be sure that the two pipes are completely engaged. Insert the Front tailpipe hanger pin into the factory rubber hanger. Loosely tighten the Muffler outlet clamp to secure the Front tailpipe. Install a 4” clamp onto the Front tailpipe outlet. Install the Rear tailpipe into the outlet of the Front tailpipe. Insert the Rear tailpipe hanger pin into the factory rubber hanger. Loosely tighten the Front tailpipe outlet clamp to secure the Rear tailpipe. Rotate the two tailpipe pieces until the hanger pins are parallel with the frame mounted pin.

Note: If installing optional tailpipe tip, cut off 4” from the Rear tailpipe outlet before installing the Rear tailpipe into the Front tailpipe outlet. See Figure 3.

Minimum distance between exhaust tip and body is one (1) inch.

16. Adjust each of the pipes to ensure that all of the hanger pins are parallel with the frame mounted pins and that the rubber hangers are all positioned slightly forward (See Figure 4). The amount of forward angle on the rubber hangers should increase the farther downstream the hanger is positioned. This allows the hangers to be properly positioned once the exhaust system reaches operating temperature.

**Figure 3 If Installing Optional Tailpipe Tip**

![Diagram of tailpipe outlet with cut line 4 inches from the outlet]
17. Install the exhaust clamp at each of the joints. Figure 5 illustrates the proper location of an exhaust clamp on a tubing joint. Torque the nuts on each of the exhaust clamps to 35 ft-lb.

Note: If a combination hanger/clamp is utilized, evenly torque nuts to 35 ft-lb. The clamps only need to be tight enough to form a seal and hold the pipes together. Over tightening the clamps may cause the system to leak due to the pipe being crimped.

If not installing the optional Banks Tailpipe Tip, skip to step 25.

18. Insert the optional tailpipe tip over the tailpipe outlet. Adjust the tip past the edge of the body or where aesthetically pleasing. Torque the band clamp to 35 ft-lb.

19. Remove the protective covering from the tailpipe tip.

Caution: the protective covering may ignite and burn if not removed prior to running the engine.

20. Your system includes two (2) Banks Power decals designed to complement the Duramax emblems on the vehicles front doors.

21. Re-connect the negative battery cable. Start the engine and listen for exhaust leaks. Tighten the exhaust clamps as necessary. Whenever possible, tack weld slip connections to prevent disengagement is recommended. The Banks Monster Exhaust installation is now complete.

22. Monster exhaust system installation is now complete.
