Products available from Banks Power for 2003-2007 Ford 6.0L

**Banks iQ System**  
(P/N 61151-61152)  
- 5” touchscreen interface that can control the Banks Diesel Tuner and/or SpeedBrake on the fly.  
- Interchangeable gauge display, read and clear codes, monitor engine diagnostics, log data, time your vehicles runs and much more.

**Banks Monster® Exhaust System Sport** (P/N 48790-48793)  
**Single and Dual** (P/N 47285-47292, 47606-47609, 48783-48788)  
- Increases exhaust flow, cuts backpressure, lowers exhaust gas temperatures (EGTs) and increases power.

**Banks Ram-Air Intake System**  
(P/N 42155)  
- Increases your airflow over stock.  
- Adds power, improves fuel economy, lowers EGTs and reduces smoke.

**High-Ram Intake**  
(P/N 42750-42751)  
- Increases flow and provides more uniform air distribution to the engine for more available power at a given boost level.

**Banks Techni-Cooler® System**  
(P/N 25974-25975)  
- Provides increased air flow to the engine by increasing air density for more increased power, lower EGTs and improved fuel economy.

**Banks Brake**  
(P/N 55467-55468)  
- Increases the stopping power of your truck and extends the service life of your brakes.

**Boost and Pyro Gauges**  
(P/N 64507)  
- Keep your engine safe by monitoring vital engine parameters.
Banks Billet Torque Converter
(P/N 72522)
- Higher torque capacity over stock
- Lockup clutch is slip-resistant so transmission fluids stay cooler and transmission life is prolonged.

Banks SpeedBrake
iQ Compatible (P/N 55455-55456)
PDA Compatible (P/N 55457-55458)
- Allows for controlled hill decent at a user defined vehicle speed.

Banks Bullet
(P/N 66524-66525)
- Adds power safely to your vehicle
- Displays critical engine functions
- Engine safeguards
- Change power levels on-the-fly

Banks Diesel Tuner
Six-Gun w/ switch (P/N 61023)
Six-Gun w/ iQ (P/N 63749)
EconoMind w/ switch (P/N 63743-63745)
EconoMind w/ iQ (P/N 63747-63748)
- Adds power safely to your vehicle
- Engine and transmission safeguards
- Change power levels on-the-fly

Thermocouple
- Add a temperature limiting function to your Diesel Tuner

AutoMind Programmer
(P/N 66100)
- Contains Banks tunes that boost your vehicles HP, Torque and MPG.
- Displays a host of critical engine functions
- Provides “service technician” diagnostic capabilities
- Has upgradeable functionality, so it will never be out of date

Banks Stinger Systems
(P/N 46465-46486)
Contains:
- Ram-Air Intake system
- Monster Exhaust (single or dual)
- EconoMind Tuner w/ Banks iQ

Banks PowerPack Systems
(P/N 46497-46519)
Contains:
- Ram-Air Intake system
- Monster Exhaust (single or dual)
- EconoMind Tuner w/ Banks iQ
- High-Ram
- Techni-Cooler System

Banks Six-Gun Bundle
(P/N 46594-46613)
Contains:
- Ram-Air Intake system
- Monster Exhaust (single or dual)
- Six-Gun Tuner w/ Banks iQ

Banks Big Hoss Bundle
(P/N 46623-46643)
Contains:
- Ram-Air Intake system
- Monster Exhaust (single or dual)
- Six-Gun Tuner w/ Banks iQ
- Big Head Wastegate Actuator
- High-Ram
- Techni-Cooler System

Gale Banks Engineering Inc., and its distributors, employees, and dealers (hereafter “SELLER”) shall in no way be responsible for the product’s proper use and service. The BUYER hereby waives all liability claims.

The BUYER acknowledges that he/she is not relying on the SELLER’s skill or judgment to select or furnish goods suitable for any particular purpose and that there are no liabilities which extended beyond the description on the face hereof and the BUYER hereby waives all remedies or liabilities, expressed or implied, arising by law or otherwise, (including without any obligations of the SELLER with respect to fitness, merchantability, and consequential damages) whether or not occasioned by the SELLER’s negligence.

The BUYER is responsible to fully understand the capability and limitations of his/her vehicle according to manufacturer specifications and agrees to hold the SELLER harmless from any damage resulting from the failure to adhere to such specifications.

The SELLER disclaims any warranty and expressly disclaims any liability for personal injury or damages. The BUYER acknowledges and agrees that the disclaimer of any liability for personal injury is a material term for this agreement and the BUYER agrees to indemnify the SELLER and to hold the SELLER harmless from any claim related to the item of the equipment purchased. Under no circumstances will the SELLER be liable for any damages or expenses by reason of the use or sale of any such equipment.

The BUYER is responsible to obey all applicable federal, state, and local laws, statutes, and ordinances when operating his/her vehicle, and the BUYER agrees to hold SELLER harmless from any violation thereof.

The SELLER assumes no liability regarding the improper installation or misapplication of its products. It is the installer’s responsibility to check for proper installation and if in doubt, contact the manufacturer.

The BUYER is solely responsible for all warranty issues from the automotive manufacturer.

Limitation of Warranty

Gale Banks Engineering Inc. (hereafter “SELLER”), gives Limited Warranty as to description, quality, merchantability, fitness for any particular purpose, productiveness, or any other matter of SELLER’s product sold herewith. The SELLER shall be in no way responsible for the product’s open use and service and the BUYER hereby waives all rights except those expressly written herein. This Warranty shall not be extended or varied except by written instrument signed by SELLER and BUYER.

Please see enclosed warranty information card, or go to www.bankspower.com/warranty, for warranty information regarding your product. All products that are in question of Warranty must be returned shipping prepaid to the SELLER and

THIS IS A HIGH PERFORMANCE PRODUCT. USE AT YOUR OWN RISK.

Do not use this product until you have carefully read the following agreement.

This sets forth the terms and conditions for the use of this product. The installation of this product indicates that the BUYER has read and understands this agreement and accepts its terms and conditions.
must be accompanied by a dated proof of purchase receipt. All Warranty claims are subject to approval by Gale Banks Engineering Inc.

Under no circumstance shall the SELLER be liable for any labor charged or travel time incurred in diagnosis for defects, removal, or reinstallation of this product, or any other contingent expense.

**WARNING:** Below 32°F (0°C) or above 140°F (60°C), the Banks iQ may be susceptible to damage as a result of extended direct exposure to sunlight, heat or extreme cold. It is highly recommended that Banks iQ be removed from its mounting location if the vehicle will be subjected to high concentrations of sunlight, heat or cold for an extended period of time. Gale Banks Engineering is not responsible for damage to Banks iQ resulting from exposure conditions.

Under no circumstances will the SELLER be liable for any damage or expenses incurred by reason of the use or sale of any such equipment.

In the event that the buyer does not agree with this agreement:

The buyer may promptly return this product, in a new and unused condition, with a dated proof-of-purchase, to the place-of-purchase within thirty (30) days from date-of-purchase for a full refund, less shipping and/or restocking fee.

The installation of this product indicates that the buyer has read and understands this agreement and accepts its terms and conditions.

Placement of the Banks Power Decals
The Banks Six-Gun/EconoMind Diesel Tuner has six power levels that you can adjust with the Banks iQ Dashboard PC.

Banks iQ is a versatile device that gives you total control of your Banks Six-Gun/EconoMind Tuner. With a touch of your finger on the bright, full-color LCD display, you can adjust power levels on-the-fly, customize the gauges you view, tune numerous performance parameters, set system warnings and alerts, see vital engine functions at a glance, and more. Evaluate your changes by running 0-60, ¼ and 1/8 mile performance tests. You can even scan, read and clear OBDII diagnostic trouble codes.

Banks iQ doesn’t stop there. It’s a true in-car PC packed full of extra functions. Listen to your favorite tunes, watch videos, play games, review Windows® Office documents, and more. Expandable and upgradeable, it comes fitted with a rechargeable battery and includes accessory cords. You’ll quickly discover Banks iQ is the device you’ll use every day, both inside and outside your car.

Each additional higher level adds approximately 20% of the available power increase. To prevent damage to the factory transmission, Banks recommends that both automatic and manual transmission vehicles do not exceed Level 4 while the vehicle is experiencing load (towing, climbing a steep grade, carrying a load, etc.).

To use the higher levels of the Six-Gun/EconoMind Diesel Tuner while towing or climbing, airflow improvements must be made to lower the exhaust gas temperature (EGT) entering the turbo. The EGT should not exceed 1400°F for more than a few seconds. Elevated EGT can damage the turbocharger and the engine.

ATTENTION!

Before proceeding with these instructions, please carefully read the DISCLAIMER OF LIABILITY and LIMITATION OF WARRANTY statement located on page 4 of this manual.

WARNING: Banks iQ may be susceptible to damage as a result of extended exposure to sunlight, heat or extreme cold. It is highly recommended that Banks iQ be removed from its mounting location if the vehicle will be subjected to high concentrations of sunlight, heat or cold for an extended period of time. Gale Banks Engineering is not responsible for damage to Banks iQ resulting from exposure conditions.
General Installation Practices

TOOLS REQUIRED:
• Inch and metric sockets
• Inch and metric combination and open-end wrenches
• Pliers
• Ford stereo removal tool ('03-04 model year vehicles only)
• Wire cutters
• Scissors
• Drill motor
• 1/8” drill bit
• 13/32” drill bit
• 7/16” drill bit
• Tap handle
• 1/4” NPT tap
• Foot-pound torque wrenches
• Penetrating oil or light lubricant spray
• Anti-seize compound
• Heat gun

Follow the manufacturer’s safety precautions. Take care to balance the vehicle to prevent it from slipping or falling. When using ramps, be sure the front wheels are centered squarely on the topsides. When raising the front of the vehicle, put the transmission in park (automatic) or reverse (manual), set the parking brake, and block the rear wheels. When raising the back of the vehicle, be sure the vehicle is on level ground and the front wheels are blocked securely.

CAUTION: Do not use floor jacks to support the vehicle while working under it. Do not raise the vehicle onto concrete blocks, masonry or any other item not intended specifically for this use.

1. Before starting work, familiarize yourself with the installation procedure by reading all of the instructions.

2. The exploded views provide only general guidance. Refer to each step and section diagram in this manual for proper instruction.

3. Throughout this manual, the left side of the vehicle refers to the driver side, and the right side to the passenger side.

4. Disconnect the negative (ground) cable from the battery (or batteries, if there are two) before beginning work.

5. Route and tie wires and hoses a minimum of 6” away from exhaust heat, moving parts and sharp edges. Clearance of 8” or more is recommended where possible.

6. When raising the vehicle, support it on properly weight-rated safety stands, ramps or a commercial hoist.

7. During installation, keep the work area clean. Do not allow anything to be dropped into intake, exhaust, or lubrication system components while performing the installation, as foreign objects will cause immediate engine damage upon start-up.

8. Save this Owner’s Manual as a reference for system maintenance and service.

9. Banks recommends either a Banks IQ or a Pyrometer (EGT) gauge and Boost gauge be installed with the Six-Gun/EconoMind Diesel Tuner to help monitor performance and exhaust gas temperature of the vehicle (see part numbers next page). To further increase engine life by lower EGT’s, Banks also recommends installing a Monster Exhaust® system (see next page).
If Six-Gun has been previously installed, skip to Section 2.

1. Disconnect the battery ground cables from each of the batteries. Secure the cables so that they do not come in contact with the battery posts during the installation.

2. Remove the (+) battery cable from the driver side battery.

3. Remove the driver side plastic battery cover, as shown in **Figure 2**. This is accomplished by depressing a tab at the front and rear of the cover. Be careful not to damage the cover, as it will be re-installed.

4. Remove the driver side battery hold down clamp (8mm socket). Remove the driver side battery.

**WARNING:** When lifting a battery, excessive pressure on the end walls could cause acid to spew through the vent caps, resulting in personal injury. Lift with a battery carrier or with hands on opposite corners. Failure to follow these instructions may result in personal injury.

**INSTALLATION OF WIRING HARNESS & CONNECTIONS FOR SIX-GUN/ ECONOMIND DIESEL TUNER**
General Assembly: Six-Gun/EconoMind and supplied wiring harnesses (Six-Gun shown)

Figure 2: Removal of the battery box cover
5. Place the Six-Gun/EconoMind Diesel Tuner in close proximity as shown in Figure 3 for 2003-04 and Figure 4 for 2005-07. The ‘In-Cab Cable’ with the three small connectors will be routed into the cabin via the grommet on the firewall. The MAP sensor harness with the two connectors will be routed via the firewall to its prospective location listed in the following steps.

NOTE: (The Six-Gun/EconoMind Diesel Tuner will be affixed to its permanent location in step 20.)

6. Locate the Powertrain Control Module (PCM) on the driver side of the vehicle engine compartment (see Figure 5).

7. Disconnect the middle connector from the PCM by opening the overcenter retaining clamp as shown in Figure 5. Route the disconnected PCM connector to the Six-Gun/EconoMind Diesel Tuner as directed below:

2003-04 model year vehicles: Route the previously disconnected middle connector under the power steering fluid reservoir towards the Six-Gun/EconoMind Diesel Tuner.

2005-07 model year vehicles: Route the previously disconnected middle connector in the most direct path towards the Six-Gun/EconoMind Diesel Tuner.

8. All Years: Plug the PCM connector into the connector on the Six-Gun/EconoMind Diesel Tuner labeled, “VEHICLE HARNESS”.

9. Locate the supplied ‘Crossover Cable’ wiring harness in your Six-Gun/EconoMind tuner kit.

10. Plug the supplied ‘Crossover Cable’ wiring harness into the Six-Gun/EconoMind Diesel Tuner connector labeled, “BANKS HARNESS.”

Figure 3: Six-Gun/EconoMind Diesel Tuner installed on the inner fender (2003-04 model year vehicles only) (Six-Gun Shown)
Figure 4: Six-Gun/EconoMind installed on the fuse box on 2005-07 model-year vehicles

Figure 5: View of the PCM after the battery cover has been removed
NOTE: Be sure that the seam on the top of the shield is facing away from the cabin (see Figure 6).

For all models, route the other end of the ‘Crossover Cable’ to the vehicle’s PCM middle connector labeled “C”. Route the ‘Crossover Cable’ as directed below:

2003-04 model year vehicles: Route the ‘Crossover Cable’ under the power steering fluid reservoir.

2005-07 model year vehicles: Route the ‘Crossover Cable’ to the PCM in the most direct path possible.

11. All Years: Plug the ‘Crossover Cable’ into the vehicle’s PCM middle connector labeled “C”.

12. Unplug the Manifold Absolute Pressure (MAP) sensor connector shown in Figure 7. The MAP connector can be unplugged by sliding the red safety slide down, pressing the locking button, then pulling on the connector.

13. Plug the Six-Gun/EconoMind MAP connector into the MAP sensor. Plug the factory MAP connector into the Six-Gun/EconoMind MAP wiring harness. Route the harness from the Six-Gun/EconoMind to the MAP sensor as shown in Figure 8. Use the supplied zip ties to secure the MAP harness to the factory harness. Failure to follow the recommended harness routing may result in a melted harness.

14. Route the Six-Gun/EconoMind ‘In-Cab Cable’ through the firewall to the passenger compartment. When passing through the firewall, either make a hole in a factory grommet or drill a hole and use a new grommet. If drilling, check the backside to make sure there are no components that may be damaged by drilling.

15. Remove the lower driver side interior panel that allows access to the fuse box.

Figure 6: (2005-07 model year vehicles only) Tuner Mounting
Figure 7: MAP sensor location

Figure 8: MAP sensor harness routing
16. From inside the vehicle, continue to pull the cable through the firewall until it is approximately 22" inside the cab. Secure the cable to the lower access panel area. Take precaution to leave the three connectors accessible for usage further in the installation process.

If only installing Banks Six-Gun/ EconoMind continue to step 17.

If Banks Brake is being installed, skip to step 20.

17. Locate the ‘OBDII Interface Cable’ in your kit. Connect the ‘OBDII Interface Cable’ to the vehicle OBDII connector. Use the large cable tie in your kit as shown in Figure 9 to secure the ‘OBDII Interface Cable’ to the vehicle OBDII connector. Now, connect the 8-pin connector from the ‘OBDII Interface Cable’ to the 8-pin connector on the Six-Gun/EconoMind ‘In-Cab Cable.’ Note: If you are not installing the optional Banks iQ then coil up and secure cable with the RJ12 (telephone style) connector end.

18. Remove the fuse box cover, located in the cabin compartment. Locate the mini-fuse #22 and remove. Install the mini-auto blade fuse tap onto the removed mini fuse as shown in Figure 10. Re-install the mini fuse with the attached blade tap into location #22 as shown in Figure 11.

19. Locate the RED single terminal connector on the ‘OBDII Interface Cable’ and connect it to the mini-fuse blade tap location #22. Replace the fuse cover and make sure not to pinch the RED single terminal wire.

Figure 9: OBDII interface cable
Figure 10: Mini-auto blade fuse tap

Figure 11
Mounting The Six-Gun/EconoMind Diesel Tuner

20. **2003-04 model year vehicles only:** Remove the clip shown in **Figure 12** to create adequate room to mount the Six-Gun/EconoMind Diesel Tuner to the driver side inner fender.

21. **2003-04 **four-wheel drive vehicles:** The module shown in **Figure 13** will appear only in four-wheel-drive vehicles. This may need to be relocated to make room for the Six-Gun/EconoMind Diesel Tuner. The mounting location of this module by the factory has not been consistent on early vehicles.

**NOTE:** Make sure all mounting surfaces are entirely clean and free of dirt and oil before mounting the Six-Gun/EconoMind Diesel Tuner. Clean and dry as required using a cloth damped in rubbing alcohol or similar cleaning solution.

21. **2005-07 model year vehicles only:** Remove the adhesive backing from two (2) dual-lock fasteners and attach them to the Six-Gun/EconoMind shield and the top of the fuse box.

22. Remove the adhesive backing from the (2) dual-lock fasteners on the back of the Six-Gun/EconoMind Diesel Tuner and affix the tuner to:

**2003-04 model year vehicles:** The inner driver side fender as shown in **Figure 3**

**Note:** Shield will not be used for installations on 03-04 models. Shield will only be used on 05-07 models.

**2005-07 model year vehicles:** The inside roof of the Six-Gun/EconoMind shield, that is mounted on the fuse box cover as shown in **Figure 4 & 6**.

**WARNING:** The use of Banks Brake is for use with installed Six-Gun/EconoMind Tuner Package with power level selector switch only.

Section 2
INSTALLATION OF WIRING HARNESS & CONNECTIONS FOR OPTIONAL BANKS BRAKE

General Assembly: Banks Brake Wire Harnesses

If not installing Banks Brake, continue to Section 3.
If an existing Six-Gun/EconoMind Tuner has been previously installed, verify that the Tuner has the latest version firmware. Check and compare to the current version available on the Banks website. Banks Brake may not function properly if Six-Gun/EconoMind Tuner firmware is not up to the current version. If the tuner is not to the latest version contact Customer Support (888) 839-5600 before continuing with installation.

1. Remove the fuse access panel below the steering column as shown in Figure 14.
2. Remove the fuse box cover, located in the cabin compartment.
If installing a Banks Brake to a previously installed Banks Six-Gun/EconoMind Tuner, continue to step 3.

If the Six-Gun/EconoMind is being installed along with the Banks Brake, skip to step 7.

Removing a Previously Installed Banks OBD II Interface Cable

3. Locate the RED single terminal connector on the Banks ‘OBDII Interface Cable’ and disconnect it from the mini-fuse blade tap location #22 if already connected. DO NOT remove the mini-fuse blade tap as it will be used for the Banks Brake wire harness installation. See Figure 15.
4. Disconnect Banks OBD II interface cable from the vehicle OBD II connector.
5. Disconnect the 8-pin connector from the OBD II interface cable from the 8-pin connector on the Six-Gun/EconoMind in-cab cable.
Figure 14  Ford (’05-'07)

Figure 15
6. Remove the OBD II interface cable from the vehicle.

**Installing Banks Brake Wire Harness**

7. From inside the engine compartment, locate the factory brake pressure sensor connector on the brake master cylinder. The brake pressure sensor will be the connector farthest away from the firewall. See Figure 16. Disconnect the factory brake pressure sensor connector.

8. Locate the Brake Pressure Sensor harness in your kit. Connect the female connector on the Brake Pressure Sensor harness to the factory male connector. Connect the male connector on the Brake Pressure Sensor harness to the factory female connector.

9. Route the 2-pin connector on the Brake Pressure Sensor harness following the Six-Gun/EconoMind in-cab cable through the firewall. Secure the wiring harness with the supplied cable ties away from any heat source or moving parts.

10. From under the dash, pull the 2-pin connector on the Brake Pressure Sensor harness through the firewall.

11. Locate the Banks Brake Wire Harness and connect the 2-pin male connector on the Brake Pressure Sensor harness to the 2-pin connector on the Banks Brake wire harness.

12. Connect the Banks Brake Wire Harness OBD II connector to the vehicle’s OBD II connector. Use a cable tie, as shown in Figure 17 to secure the Banks Brake Wire Harness to the vehicle’s OBD II connector.

13. Locate the Fuse connector on the Banks Brake Wire Harness and connect it to the mini-fuse blade tap location #22. Replace the fuse cover and make sure not to pinch the Fuse wire.

14. Now, connect the 8-pin connector from the Banks Brake Wire Harness to the 8-pin connector on the Six-Gun/EconoMind In-Cab Cable.

15. Locate the Foot Brake position switch connector under the dash. See Figure 18. Disconnect the foot brake position switch connector.
Figure 17  OBD II Connector

Figure 18  Brake Position Sensor location under dash
16. Locate the Brake Position Switch intercept connectors on the Banks Brake Wire Harness. Connect the female connector on the Brake Position Switch intercept connectors to the factory black brake position switch connector. Connect the male connector on the Brake Position Switch intercept Connectors to the factory female brake position connector that was disconnected.

17. From under the steering column, remove the three (3) screws that hold the steering column panel covers in place. See Figure 19.

18. Using a standard screw driver remove the plastic ignition key guide. See Figure 20.

19. Move the steering column down to the lowest possible position to aid in removal of the top steering column panel. Remove the top steering column panel.

CAUTION: Be careful when removing the top steering column panel or damage may result.

20. Locate the tow haul connector under the main wire harness towards the top rear of the steering column. See Figure 21.

21. Disconnect the tow haul connector.

22. Locate the tow haul intercept connector on the Banks Brake Wire harness. Route the Tow Haul intercept connectors under the dash towards the front of the vehicle and up to the top of the steering column following the factory harness to the factory tow haul connector. Make sure the connectors and wires are free of rotation from the steering column. Connect the female connector on the Tow Haul intercept connectors to the factory male tow haul connector. Connect the male connector on the Tow Haul intercept connectors to the factory female tow haul connector. Secure the connectors and wires with supplied cable ties.
**Figure 20** Remove Plastic Ignition Key Guide

**Figure 21** Tow Haul Connector on steering column, under main harness
23. Connect the Banks Brake module 10-pin connector on the Banks Brake wire harness to the Banks Brake module. The connector will be the only one with a label.

**NOTE:** Make sure the correct connection is made to the Tuner and the Banks Brake module before proceeding.

24. Remove the adhesive backing from the dual-lock fasteners on the back of the Brake Module and attach the module to the location shown in Figure 22. Apply light pressure to the Brake Module by hand for 60-seconds to create a strong bond between the steering column surface and hook & loop interlocking fasteners. Using the supplied cable ties, secure the Banks Brake module wire harness away from any moving components.

**NOTE:** Make sure all mounting surfaces are entirely clean and free of dirt and oil before mounting the Brake module. Clean and dry as required using a cloth damped in rubbing alcohol or similar cleaning solution.

25. Install the top steering column panel back in place.

26. Reinstall the plastic key guide into place. Make sure it is snapped into place.

27. Reinstall the three (3) factory screws to fasten the steering column plans back together.

28. The RJ12 connector (phone like connector) on the Banks Brake Wire harness will be connected in the next section to the Brake level selector switch. Leave this wire loose for connecting to Brake level switch.

29. Go over all connection. Secure the wire harness with the supplied ties under the dash.

**WARNING:** Take care to keep any cables away from the pedals or where they could become tangled.

-End, Section 2-
Section 3
INSTALLATION OF THE SIX-GUN/ECONOMIND/BRAKE SELECTOR SWITCHES

Caution: Do not use excessive force when working on plastic parts. Permanent damage to the part might result.

1. Remove the lower driver side interior panel that allows access to the fuse box.

2. Remove the stereo using Ford stereo removal tools as shown in Figure 23. These are readily available at automotive supply stores.

3. Remove two (2) bolts that reside above the stereo. These are accessible once the stereo has been removed.

4. Detach the dash. At this point the dash is held in place entirely by removable fasteners. Disconnect all electrical connections on the back of the dash once it has been detached.

5. Remove the dash from the vehicle.

6. Cut out the template in Figure 36 on page 41 and tape it to the front of the dash panel as shown in Figure 25. The template will be used as a guide for drilling holes to locate the Six-Gun/EconoMind and Brake selector switch.

For 2003-04 model year vehicles, skip to Step 9 to finish the selector switch(s) installation procedure.

7. 2005-07 Automatic Transmission vehicles: Set the vehicle’s parking brake. Insert the key and turn the vehicle to the ‘ON’ position without starting it. Pull the shift lever down into first gear to allow clearance for dash panel removal.

All 2005-07 vehicles: Pull the plastic trim surrounding the instrument panel and radio / climate controls towards you until it releases from the main dashboard — it is attached by a series of spring clips around its perimeter. Disconnect all electrical connectors from the back of the dash trim and remove it from the vehicle.

8. Cut out the template in Figure 36 on page 41 and tape it to the backside of the dash panel as shown in Figure 26. The template will be used as a guide for drilling holes to locate the Six-Gun/EconoMind and Brake selector switch.

For 2005-07: If installing both Six-Gun/EconoMind and Brake, trim the back side of the dash panel as shown in Figure 26.

Figure 23: Removal of the stereo (03-04 model year vehicles only)
9. All Model Years: If only installing the Six-Gun/EconoMind, only drill the hole closest to the driver side window to ease installation. Using a 13/32” Uni-drill, center the bit onto the 13/32” drill location(s) on the template and slowly drill through. Using a 1/8” drill bit, center and drill through the 1/8” location on the template. Remove and discard the template and any plastic shavings. De-burr the drilled hole(s) as needed to ensure that the Six-Gun/EconoMind/Brake selector switch(s) fit(s) squarely against the dash panel.

10. Remove the nut and internal tooth washer(s) from the Six-Gun/EconoMind/Brake switch and test fit the switch(s) into the drilled hole(s). Ensure that the alignment pin(s) properly fit(s) in the 1/8” hole. Enlarge the holes as necessary to allow the switch to properly fit. Do not fasten the switch to the dash panel yet.

11. Align the Banks Six-Gun/EconoMind/Brake label on the previously drilled hole(s) on the front of the dash panel. Make sure the entire mounting surface is clean and free of dirt and oil before mounting the label. Clean and dry as required using a cloth damped with rubbing alcohol of similar cleaning solution. Remove the adhesive backing and affix the label to the dash panel. Hold the label against the panel for approximately 20 seconds while applying pressure to allow the adhesive to properly adhere to the surface.

12. Rotate the switch counterclockwise until the shaft stops. Verify that the Six-Gun/EconoMind washer tab is inserted into the #6 position on the switch and that the Banks Brake washer tab is inserted into the #5 position on the switch as shown in Figure 27. Note: All of the power settings may not be usable if the tabs are not inserted into the proper position.

13. Install the switch(s) through the 13/32” hole(s) on the backside(s) of the bezel. The alignment pin(s) should rest in the 1/8” hole(s) and the switch(s) should align with the slots as shown in Figure 27.
**Figure 25:** Template taped to front of dash on 2005-07 model year vehicle, ready to be drilled.

**Figure 26:** 05-07 Dash panel trimming
fully rotated counterclockwise. Secure the switch(s) with the internal tooth washer(s) and nut(s). Snug the nut(s). Be careful not to over-torque the nut(s) and damage the threads.

14. Install the knob on the shaft facing the #1 Level on the Six-Gun/EconoMind label and the OFF setting on the Brake label. On the knob(s), snug the two (2) set screws with the supplied 0.050” hex key wrench. The completed switch(s) installation will appear as shown in Figure 28 for 2003-04 model year and Figure 29 for 2005-07 model year.

15. Re-install the dash panel, make all electrical connections that were disconnected, and re-install the radio (2003-04 model year vehicles only).

If not installing the optional Banks Brake, skip step 16.

16. For installation of the Banks Brake option: Locate the RJ12 connector on the Brake wire Harness and connect it to the back of the Brake switch.

17. Route the Six-Gun/EconoMind switch’s cable to the wire harness that was routed into the passenger compartment from the Six-Gun/EconoMind Diesel Tuner, and plug the 2-pin connector into the corresponding connector on the Six-Gun/EconoMind harness.

NOTE: The 6-pin plug on the wire harness routed from the Six-Gun/EconoMind module to the passenger compartment will not be used.

18. 2003-04 vehicles only: Reinstall the lower interior panel that allows access to the fuse box, the battery cover and battery cables.

Section 4
OPTIONAL THERMOCOUPLE INSTALLATION

If not installing optional thermocouple, skip to Section 5.

1. The thermocouple monitors the temperature of the exhaust gases entering the turbocharger at the turbine housing. Installation requires that the exhaust manifold be drilled near the manifold outlet. It is recommended that the manifold be removed from the engine to thoroughly clean out all metal chips from drilling. All metal shavings must be cleaned from the manifold to avoid turbine wheel damage and possible interference with the turbocharger's variable geometry turbine stage.

2. Disconnect the Exhaust Back Pressure Sensor tap located at the front of the driver side manifold. The pressure tap must be removed by using a 9⁄16” open-end wrench to hold the fitting stationary, and loosen the tube using a 5⁄8” open-end wrench. The fitting is shown in Figure 30.

NOTE: Failure to hold the fitting stationary will damage the tube upon removal.

3. Remove the driver side exhaust manifold.

4. Drill a 7⁄16” hole in the driver side exhaust manifold at the location shown in Figure 31.

5. Tap the hole for a 1⁄4” NPT thread. Check the thread depth as you tap by periodically removing the tap and screwing the pipe coupling into the tapped hole. The coupling should thread in 3 to 3½ turns hand tight. Do not install the probe in place at this time. Caution: Running the tap too deeply can prevent the pipe fitting from properly sealing.

6. Remove the NPT fitting from the thermocouple and install it on the exhaust manifold. Use anti-seize lubricant on the threads and torque to 14–16 lb-ft.

7. Remove all metal chips from the exhaust manifold. Note: Failure to remove all metal chips could result in catastrophic damage to the turbocharger’s turbine wheel or interfere with the operation of the variable geometry vane mechanism.

8. Re-install the exhaust manifold. Apply anti-seize lubricant to the manifold bolt threads and torque to 28 lb-ft. Use the tightening sequence shown in Figure 32.

Figure 30: Location of the static exhaust pressure line tap
9. Tighten the turbocharger adapter pipe fasteners to 20 lb-ft as shown in Figure 33.

11. Connect the thermocouple wires to the Six-Gun/EconoMind Diesel Tuner with the supplied screws. The YELLOW thermocouple wire attaches to the free YELLOW wire on the Six-Gun/EconoMind Diesel Tuner. The RED thermocouple wire attaches to the free RED wire on the Six-Gun/EconoMind Diesel Tuner.

12. Slide the heat shrink over the exposed metal junction, and supply moderate heat to seal the connection. A heat gun works well.

13. Route the thermocouple to the exhaust manifold and install the thermocouple in the fitting.

14. Reconnect the ground cables to the vehicle's batteries.

**NOTE: Once the Six-Gun/EconoMind Diesel Tuner is powered up at key-on, it will ‘learn’ that a thermocouple is installed and automatically enable the EGT limiting function. If the thermocouple is removed after being installed and run on the vehicle, the Six-Gun/EconoMind Diesel Tuner will assume that the sensor or connection has gone bad, and cease adding power while triggering the [2,3] diagnostic code (see Trouble Shooting Section 10). To ensure that the Six-Gun/EconoMind Diesel Tuner operates properly after removing a previously installed thermocouple, see the ‘Clearing Learned Information’ Section 9. EGT limiting will not be operational and excessive EGTs may develop at higher power levels.**

-**END, SECTION 4-**
The Banks Brake has five (5) operating settings; OFF, LOW, Medium (MED), HIGH and Foot Brake Activation (FB). See Figure 34.

OFF mode allows the vehicle to behave as if the Banks Brake is not present.

When the selector switch is turned to the LOW, MED, or HIGH the Banks Brake will activate and begin slowing the vehicle any time the accelerator pedal is not applied and the vehicle speed is greater than 15 mph.

LOW strength setting achieves a lower level of braking force and is recommended for lightly loaded or unloaded vehicles. The LOW setting may also be used for daily driving.

MEDIUM (MED) strength achieves a moderate level of braking force by slightly delaying transmission downshifts. This setting is recommended for moderately loaded vehicles.

HIGH strength achieves the highest level of braking force by aggressively downshifting the transmission and closing the turbocharger vanes. This setting is recommended for heavily loaded vehicles or whenever aggressive braking is desired.

CAUTION: Using the HIGH setting with a lightly loaded vehicle will result in VERY aggressive braking. Become familiar with the characteristics of the Strength Settings before encountering slippery road conditions, including rain, snow and icy.

Foot Brake Activation

When Foot Brake Activation is selected the Banks Brake will only activate when the foot brake is applied. In this setting the Brake will apply the highest level of braking force to assist in slowing the vehicle.

To Enable Foot Brake Activation, turn the Brake selector switch to the Foot Brake Activation (FB) Level. To Disable, turn the switch to any other desired level.

CAUTION: Your Banks Brake is NOT a substitute for the hydraulic brakes on your truck. The device will not correct or compensate for improperly maintained hydraulic brakes. Also, please be aware that your Banks Brake is not designed to be used as a parking brake or to bring your vehicle to a complete stop. Your Banks Brake is a supplementary braking system designed to help you slow down or to assist you in maintaining a more constant speed when descending a grade. Remember that Banks Brake is first and foremost a preemptive device and is most efficient when used to help prevent, rather than correct, a vehicle over speed situation.

The use of a Banks Brake does not increase the load capacity of your vehicle. Gross combined Weight Rating specifications should always be adhered to. The Banks Brake will allow you to slow your vehicle more effectively within your vehicle’s weight specifications.
OPERATION/DRIVING

Now that you are familiar with the features that are available with Banks Brake, it is recommended that you experiment with the various settings prior to using the braking features in a towing or extreme driving situation. Under light load conditions on local streets, the MEDIUM (MED) setting is an appropriate starting point to provide a reasonable demonstration that the brake is functioning.

NOTE: Whenever the brake is active and the footbrake is applied, the vehicle will not upshift until the throttle is pressed. This is also true even if cruise control is resumed.

For some model vehicles, whenever the brake is active the vehicles Tow-haul mode will activate. The tow-haul mode will deactivate when the Banks Brake is deactivated.

WHEEL SLIP DETECTION

The Banks Brake continuously monitors wheel speeds to detect possible slippage caused by braking. If this occurs, the brake will shut off until traction is regained and then remain off for 30 seconds. This will be communicated as a fault via the Banks iQ Status Indicator.

Section 6
AUTOMATIC TRANSMISSION LEARNING
(REQUIRED FOR SIX-GUN/ECONOMIND ONLY)

The 6.0L Ford Trucks equipped with the TorqShift™ 5-speed automatic overdrive transmission use an adaptive shift control logic. This will require the transmission to learn how to cope with the additional power created by the Banks Power products before it will shift properly. Additionally, the Banks Six-Gun/EconoMind Diesel Tuner will require a short learning curve to characterize the transmission in order to optimize fueling during gear change events. The following sequence must be followed to allow for collaborative learning between the Banks Six-Gun/EconoMind and the transmission’s control system. Failure to follow the sequence can result in damage to the transmission. Perform the following sequence at a location where it is safe to accelerate to 60 mph without exceeding the posted speed limit.

1. Start the truck and allow the engine to reach normal operating temperature.

2. Set the Six-Gun/EconoMind switch to power level 2.

3. Accelerate with the pedal to the floor, from a standing start to 60 mph. Repeat three (3) times.

4. Cruise at 30 mph, then press the accelerator to the floor to cause the transmission to downshift. Continue accelerating to 60 mph.

5. Repeat steps (2) and (3) for the next power setting.

6. Continue to increase the power setting and drive cycle until the desired power setting is achieved.

The TorqShift™ 5-speed automatic transmission will continually adapt to the power output of the engine to optimize shift quality. This will result in the transmission un-learning how to cope with the higher power settings of the Six-Gun/EconoMind Diesel Tuner, if the Six-Gun/EconoMind Diesel Tuner is returned to a lower power setting. The rate that the transmission un-learns how to cope with the higher power levels, when switching to a lower power level, depends on the driving cycle. The transmission will quickly adapt to the power setting if the driving cycle includes regular gear changes at high loads. The transmission learning procedure will need to be repeated when switching back to the higher power settings once the transmission adapts to the lower power settings. It will be apparent when the transmission adapts to the lower settings by monitoring the feel of the gearshift. Gear changes will be noticeably harder when initially switching from a higher to lower power setting. This will soften as the transmission adapts to the new setting.

For example: If the transmission has adapted to level 3 and it is desired to go to level 6, the transmission learning procedure can start at level 3.

IF TRANSMISSION SLIP IS DETECTED DURING THE TRANSMISSION LEARN PROCESS, REDUCE THE POWER LEVEL BY ONE, AND START OVER AT STEP 3.

-END, SECTION 6-
Section 7
CHECKING ENGINE PERFORMANCE

The Six-Gun/EconoMind Diesel Tuner requires the engine coolant temperature (ECT) to be above 110° before it will add fuel. If the optional Banks IQ or DynaFact® gauges are installed, observe the operation of the boost and pyrometer (EGT) gauge values while driving under varying conditions. Turbocharger boost pressure will increase as a function of load and engine RPM, thus the engine will produce little boost while cruising at light throttle, with maximum boost while climbing hills heavily loaded during acceleration. Note the boost level seen during hard acceleration with a given load. If performance seems to have deteriorated sometime in the future, the maximum boost figures may be compared to see if boost has dropped off. Lower boost may be caused by turbo ducting leaks, a malfunctioning wastegate or fuel injection pump, or dirty air filter. Typical maximum boost pressure settings will vary considerably with stick or automatic transmission options, year model of vehicle and altitude. Note: Before key-off, check tuner for error codes.

Use your Banks EGT gauge(optional) to monitor exhaust gas temperature (EGT) in the engine. At idle, exhaust gas temperature will be very low, perhaps only 300°F. As the engine is accelerated for higher speeds with greater loads, the EGT will rise. The highest EGT will be seen under maximum load at full throttle, such as climbing a steep grade with a heavily laden vehicle.

To avoid heat damage to various engine components it is recommended that the exhaust gases cool below 400° before the engine is shut down. Your Six-Gun/EconoMind Diesel Tuner is calibrated to maintain a maximum EGT of 1350°F. You may experience brief excursions slightly above 1350°F under acceleration. This is normal and EGT should return to 1350°F or below within a few seconds. If you find that EGT remains high for any length of time, check for boost leaks or a dirty air filter.

- END, SECTION 7 -

Section 8
CLEARING LEARNED INFORMATION

If the Six-Gun/EconoMind Diesel Tuner has been moved to a different vehicle, or you are instructed to do so by Banks Technical Staff, it is possible to reset all of the parameters that the Six-Gun/EconoMind has ‘learned’ - presence of an EGT thermocouple or Speed-Loader, etc.

CAUTION: The following procedures can only be carried out with the engine OFF!

1. Turn the vehicle key to ON but DO NOT start the engine.

2. Fully depress the throttle pedal and then release it completely. Repeat 5 times. The GREEN LED will flash when this is completed successfully.

3. Turn the key OFF. Wait 30 seconds, or until the GREEN LED goes off and stays off. Turn the key back to the ON position but DO NOT start the engine.

4. Fully depress the throttle pedal and then release it completely. Repeat 5 times.

- END, SECTION 8 -
If an existing Six-Gun/EconoMind Tuner has been previously installed, verify that the Tuner has the latest version firmware. Check and compare to the current version available on the Banks website. Banks Brake may not function properly if Six-Gun/EconoMind Tuner firmware is not up to the current version.

Six-Gun/EconoMind/Brake Troubleshooting (using Tuner/Module LED’s).

If you feel that your Six-Gun/EconoMind Diesel Tuner and/or Banks Brake is not functioning properly, some diagnostics can be performed. Your Banks Brake/Six-Gun/EconoMind Diesel Tuner is equipped with diagnostic features that will detect and display certain errors. Remove the Banks Brake/Six-Gun/EconoMind Diesel Tuner from its mounting location while keeping all connectors plugged in. Turn the vehicle key to the ON position. Observe the two LEDs mounted on the upper corner of the Six-Gun/EconoMind Diesel Tuner.

• A steady GREEN LED will illuminate If all wire connections are correct, the engine is running and the engine coolant temperature is within its normal operating range.

• The GREEN LED will flash if all wire connections are correct, the engine is running, but the engine coolant temperature is not within its normal operating range. The GREEN LED will stop flashing once the engine coolant temperature is within its normal range. Power will not be added if the coolant temperature is not within its normal range (not to be confused with Speed-Loader flash on power up).

• None of the LEDs will illuminate if the fuse on the Six-Gun/EconoMind wiring harness is blown or the power supply hook-up is not properly connected. The power supply wire is the fused wire that connects to the t-tap at the PCM. If the power connection and fuses are okay, contact Banks Technical Service.

• The RED LED will flash if a connection is incorrect or if there is a problem with the system, when the engine is running. The RED LED will flash in sequence to identify a particular fault code. A Banks Brake/Six-Gun/EconoMind Diesel Tuner’s fault code is comprised of 2 digits. Each code is expressed in a sequence of 2 sets of the flashing RED LED separated by a brief flashing of the GREEN LED. Each set of a number of RED LED flashes represents a digit. A longer flashing of the GREEN LED separates the sequences. The LEDs will continue to flash to display all the errors, and then repeat.

Table 1 lists the Six-Gun/EconoMind Tuner fault codes.

Table 2 lists the Brake Module fault codes.

For example, if a faulty thermocouple is detected (code 2,3) by the Six-Gun/EconoMind Diesel Tuner, the following RED and GREEN LED flashing sequence is observed when the key is ON:

(1) Two times flashing RED LED
(2) One time quick flashing GREEN LED
(3) Three times flashing RED LED
(4) One time longer flashing GREEN LED

The above flashing sequence will repeat continuously. When the problem is corrected, the fault code will be eliminated and replaced with a steady GREEN LED. Note: If multiple codes are set, they will be displayed in a series separated by the longer flashing GREEN LED. When reading codes, make sure to watch the entire series until you see the first code repeat.

REMOVAL OF THE SIX-GUN/ECONOMIND DIESEL TUNER

If the Six-Gun/EconoMind Diesel Tuner should ever need to be removed from the vehicle, perform the following:

NOTE: The ignition must remain in the OFF position throughout the removal process.

1. Disconnect the Six-Gun/EconoMind’s 46-pin connector (connector C) from the middle connection on the PCM.

2. Re-connect the vehicle’s 46-pin connector back into the middle connection on the PCM.

3. Disconnect the Six-Gun/EconoMind’s MAP connections from the vehicles MAP sensor and harness. Re-connect the vehicle’s MAP connector back into the MAP sensor.

4. Disconnect the 2-ring terminals from the EGT thermocouple.

5. Disconnect the 3 small connectors on the ‘In-Cab Cable’ and gently pull the cable back through the firewall.

Failure to follow the above instructions when removing the module will result in a “Check Engine” light on the dash and a Diagnostic Trouble Code being stored in the factory computer, in addition to the engine not running.

NOTE: Banks Brake will not function without the Six-Gun/EconoMind Tuner installed.
