General Installation Practices

Dear Customer,
If you have any questions concerning the installation of your Banks Ram-Air System, please call our Technical Service Hotline at (888) 839-2700 between 7:00 am and 4:00 pm (PT). If you have any questions relating to shipping or billing, please contact our Customer Service Department at (888) 839-5600.

Thank you.

1. For ease of installation of your Banks Ram-air intake system, familiarize yourself with the procedure by reading the entire manual before starting work. This manual contains 16 pages of copy, illustrations and parts listing. If any pages are missing from this manual please call Gale Banks Engineering immediately for a replacement.

2. The exploded view of the Ram-Air assembly (pages 4-5) provides only general guidance. Refer to each step and section diagram in this manual for proper instruction.

3. Throughout this manual, the left side of the vehicle refers to the driver’s side, and the right-side to the passenger’s side.

4. Disconnect the ground cable from the battery before beginning work. If there are two batteries, disconnect both.

5. Route and tie wires and hoses a minimum of 6 inches away from exhaust heat, moving parts and sharp edges. Clearance of 8 inches or more is recommended where possible.

6. During installation, keep the work area clean. If foreign debris is transferred to any Banks system component, clean it thoroughly before installing.

7. When raising the vehicle, support it on properly weight-rated safety stands, ramps or a commercial hoist. Follow the manufacturer’s safety precautions. Take care to balance the vehicle to prevent it from slipping or falling. When using ramps, be sure the front wheels are centered squarely on the topsides; put the transmission in park; set the parking brake; and place blocks behind the rear wheels.

Definitions of ANSI Z535 Safety Standards

⚠️ **DANGER**: Indicate[s] a hazardous situation which, if not avoided, will result in death or serious injury.

⚠️ **WARNING**: Indicate[s] a hazardous situation which, if not avoided, could result in death or serious injury.

⚠️ **CAUTION**: Indicate[s] a hazardous situation which, if not avoided, could result in mild or moderate injury.

⚠️ **NOTICE**: Indicate[s] a situation that requires your immediate attention.
**CAUTION:** Do not use floor jacks to support the vehicle while working under it. Do not raise the vehicle onto concrete blocks, masonry or any other item not intended specifically for this use.

**NOTICE:** The Banks Ram-Air Filter comes pre-oiled and no oiling is necessary for the initial installation. Service the filter as specified in the Filter Maintenance Section of this manual.

**Tools Required:**
- Hex driver for use with supplied T20 Torx Bit
- 9⁄16” Open or boxed end wrench
- 1⁄4” Hex L-Wrench
- 3⁄8” Drive ratchets with metric and standard sockets
- Standard and Phillips head screwdrivers
- Standard and needle-nose pliers
- Clean shop towels or rags
- 5⁄16” Nut driver
- Thread sealant

Section 2
RAM-AIR INSTALLATION

**NOTICE**: Use the Bill of Materials Chart and the General Assembly Drawing to reference component nomenclature and location. Use caution when working in the engine compartment. Make sure the engine has been OFF for several hours and cool.

You are about to install the Banks Ram-Air Intake System. Read and follow all steps before working on the vehicle. Some components from the OEM air intake system will remain in service. Take care when removing OEM air intake components to not damage them.

1. Loosen the three band clamps on OEM intake tube at connection to OEM airbox lid and boost tubes. See Figure 2.

2. Disconnect the sensor connector from the OEM air box cover.

3. Remove the Sensor:

   **NOTICE**: If your vehicle is a 2011 model year, perform step 3a only. If your vehicle is a 2012-14 model year, perform step 3b only.

   3a. Use the provided Torx20 bit (92987) to remove the two MAF sensor screws. See Figure 3.

   3b. Use a ⅛” Hex L-Wrench or a pair of pliers to remove the screw. See Figure 4.

4. If your vehicle is a 2011-2012 remove the hose from the driver side of the OEM intake tube.

5. Remove the OEM intake tube. See Figure 5.

---

*Figure 2*
6. Un-latch 3 clips holding OEM lid, to air filter housing. See **Figure 6**.

7. Remove OEM lid, and filter from filter housing. See **Figure 7**.

8. Locate Banks Ram-Air Filter Lid (41871), and left Mounting Bracket (41873). Attach the lid support brackets to Banks Ram-Air Filter Lid using supplied M6 Phillips Head machine screws (91248). See **Figure 8**.

9. Install the right Mounting Bracket (41874) onto the lid. Very loosely install the bracket using supplied M6 Phillips Head machine screws (91248), this item will be fully tightened down at a later step. See **Figure 9**.

10. Locate the 41872 Tube.

**NOTICE**: If your vehicle is a 2011-2012 model year, perform step 10a only. If your vehicle is a 2013-14 model year, perform step 10b only.

10a. Apply thread sealant to threads of the ¼ NPT to 3/8” hose barb adapter (92132) and install into Banks Intake Tube using a 9/16” wrench. See **Figure 10**.

10b. Apply thread sealant to threads of the ¼ NPT plug (92262) install into Banks Intake Tube using a ¼” Hex L-Wrench. See **Figure 11**.

11. Install the OEM sensor according to vehicle year.

**NOTICE**: If your vehicle is a 2011 model year, perform step 11a only. If your vehicle is a 2012-14 model year, perform step 11b only.

11a. Remove the OEM gasket from the MAF Sensor and install the Banks MAF Gasket (93067) onto the OEM sensor and install into the Banks Tube.

---

**Figure 6**

**Figure 7**
(41872) using the two provided 6-32 screws (91719). Install the Map Sensor Plug (41876) into the adjacent sensor port. See Figures 12-14.

11b. Install the MAF Gasket (93067) and MAF Blockoff Plate (41875) onto the Banks Tube (41872) using the two provided 6-32 screws (91719). Install the OEM Map sensor onto the port using the provided M6-16mm screw (91249). See Figures 15 and 16.

12. Install the Hose Clamp #104 (92904) onto the Filter (41828) and loosely tighten. See Figure 17.

13. Insert large opening of Banks Intake Tube, into corresponding opening in Banks Air Filter Housing lid. Inset tube far enough to be able to install Banks Ram-Air Filter onto intake tube. See Figure 18.

14. When installing Banks Air Filter onto Banks Intake Tube you will feel a snap as the filter fully seats onto intake tube. Tighten band clamp with a 5/16” nut driver. See Figure 19.

15. Install silicon hoses (94297 & 94285) and hose clamps (92864 & 92853) onto the OEM boost tubes but do not tighten the clamps at this time. See Figure 20.

16. Insert Banks Tube, Lid and Filter assembly onto OEM Airbox Housing.

Figure 15

ensuring that tabs of the brackets fit into the slots of the OEM housing. See Figure 21.

**NOTICE**: Variation in the OEM Airbox Housing may make installation of the right Mounting Bracket into the corresponding feature of the OEM Airbox Housing difficult. If this is the case on your vehicle, completely remove the right Mounting Bracket and reinstall once the Banks Tube, Lid and Filter assembly is completely seated in the OEM Airbox Housing.

17. First insert the driver side outlet of the Banks Tube into the driver side coupling hose by pulling up on the OEM boost tube and inserting the tube into the coupling. Ensure the left side bracket tabs remains inside the OEM housing slots. See Figure 22.

**Figure 16**
18. Install the passenger side outlet of the Banks Tube into the passenger side coupling hose. Ensure the left side bracket tabs remain inside the OEM housing slots. See Figure 23.

19. Tighten the four hose clamps on the coupling hoses.

20. Fully install the right side housing bracket and tighten down the screws. OPTIONAL: The OEM tabs can be removed or positioned out of the way of the new bracket and left on the housing. See Figure 24.

21. Reinstall the sensor connector onto the OEM sensor.

22. If your vehicle is a 2011-2012, reinstall the hose onto the Hose Barb Fitting (92132). This completes the installation of the Banks Ram-Air Intake system. Check all hose clamps for tightness and connectors for a sure fit and intake tube is not touching any engine components.

-END, SECTION 2-
Section 3
AIR FILTER CLEANING INSTRUCTIONS

OILED AIR FILTER ONLY

NOTICE: The Banks Ram-Air
Oiled Air Filter comes pre-oiled
and no oiling is necessary for
initial installation. Use Banks
Ram-Air Filter Cleaning System
(part#90094), available from Gale
Banks Engineering to service the
Air Filter. Follow the instructions
included with the cleaning sys-
tem to clean and re-oil your Bank
Ram-Air Oiled Air Filter.

1. PRE-CLEANING
Tap the element to dislodge any large
embedded dirt, then gently brush with
a soft bristle brush. NOTE: If complete
cleaning is not practical at this time,
reoil the element and reinstall in your
vehicle.

2. SPRAY-ON CLEANING
Spray air-filter cleaner liberally onto
the entire element and let soak for 10
minutes.

3. PAN CLEANING
Large air-filter elements can be
rolled or soaked in a shallow pan of
air-filter cleaner. Remove immediately
and let soak for approximately 10
minutes.

NOTICE: NEVER use gasoline,
steam, caustic solutions, strong
detergents, high-pressure
nozzles, or cleaning solvents to
clean the filter element. All of
these can cause harm to the filter
media as well as SHRINK and HARDEN
the rubber end caps.

4. RINSING
Rinse off the element with low-
pressure water. Tap water is okay.
Always flush from the clean side to
dirty side. This removes the dirt
and does not drive it into the filter.

5. DRYING
Always dry naturally. After rinsing,
shake off all excess water and let the
element dry naturally.

6. AEROSOL OILING
After cleaning air filter always reoil
before using. Spray air filter oil down
into each pleat with one pass per
pleat. Wait 10 minutes and re-oil any
white spots still showing.

7. OILING HINTS
Never use a Banks Ram-Air filter
without oil (the filter will not stop
the dirt without the oil). Use only air
filter oil. Air-filter oil is a compound
of mineral and animal oil blended
with special polymers to form a very
efficient tack barrier. Red dye is
added to show just where you have
applied the oil. Eventually the red color
will fade but the oil will remain and
filter the air. NEVER USE Automatic
Transmission Fluid. NEVER USE Motor
Oil. NEVER USE Diesel Fuel. NEVER USE
WD40, LPS, or other light-weight oils.

8. REINSTALL
Reinstall your Banks Ram-Air filter
element with proper care. Make sure
the element seats properly in the filter
case. Install the cover making sure it’s
in the right position. Tighten all the
nuts, bolts, screws or clips to factory
specifications.

9. DO NOT DISCARD
Affix the “Do Not Discard” sticker to
the filter case (included with every
Banks replacement element). Make
sure you put the sticker in a highly
visible place to alert your mechanic
not to discard.

10. PERFORMANCE HINTS
Service every 50-100,000 miles on
street-driven applications. Service more often in offroad or heavy-dust conditions. If an air-filter restriction gauge is installed, then change the element when the air-filter restriction reaches 18”–H2O.

**CAUTION**: Extremely fine dust from agriculture or offroad use will pull the oil from the element. Frequent reoiling of the element’s clean side might be required. Completely service when practicable. For extra protection use an air-filter sealing grease on rubber ends of the element. Service only with air-filter cleaner and air-filter oil.

### DRY FILTER CLEANING

Clean every 50-100,000 miles on street-driven applications. Clean more often in offroad or heavy-dust conditions. If an air-filter restriction gauge is installed, then change the element when the air-filter restriction reaches 18”–H2O.

1. **PRE-CLEANING**
   Carefully tap the air filter element to dislodge any large embedded dirt or debris.

2. **CLEANING**
   Spray an appropriate DRY AIR-FILTER CLEANER SOLUTION liberally onto both sides of the entire filter element with the majority applied to the dirty side. Soak for 10 minutes. Do not allow the DRY AIR-FILTER CLEANER SOLUTION to dry on the air filter.

**NOTICE**: NEVER use gasoline, steam, caustic solutions, strong detergents, high-pressure nozzles, or cleaning solvents to clean the filter element. All of these can cause harm to the filter media as well as SHRINK and HARDEN the rubber end caps.

3. **RINSING**
   Rinse the filter element with cool or warm (not hot) water from the clean side out in order to flush the dirt out of the filter. It may be necessary to use your fingers on the hose to apply light water pressure. Repeat steps 2 and 3, until the water flowing through the media is completely clear of any dirt and debris.

4. **DRYING**
   After rinsing, gently shake off excessive water and allow to dry naturally. Re-install the filter onto the intake system, airbox or custom assembly once it is dry or just slightly damp. Follow all original installation instructions.

5. **REINSTALL**
   Reinstall your Banks Ram-Air filter element with proper care. Make sure the element seats properly in the filter case. Install the cover making sure it’s in the right position. Tighten all the nuts, bolts, screws or clips to factory specifications.

6. **DO NOT DISCARD**
   Affix the “Do Not Discard” sticker to the filter case (included with every Banks replacement element). Make sure you put the sticker in a highly visible place to alert your mechanic not to discard.

7. **PERFORMANCE HINTS**
   Service every 50-100,000 miles on street-driven applications. Service more often in offroad or heavy-dust conditions. If an air-filter restriction gauge is installed, then change the element when the air-filter restriction reaches 18”–H2O.

---

END, SECTION 3-
Your system includes two Banks Power logos that have been designed to compliment the Ford badging on your truck. We have provided measurements, which will allow you to place these logos in a position that gives a clean OEM look. See Figure 25.

-END, SECTION 4-
