06/27/2019 PN 97686 v.1.2
Dear Customer,

If you have any questions concerning the installation of your Banks Derringer Tuner, please call our Technical Service Hotline at (888) 839-2700 between 7:00 a.m. and 4:00 p.m. (P.T.). If you have any questions relating to shipping or billing, please contact our Customer Service Department at (888) 839-5600.

Thank you.

CAUTION! Do not use floor jacks to support the vehicle while working under it. Do not raise the vehicle onto concrete blocks, masonry or any other item not intended specifically for this use.

1. Before starting work, familiarize yourself with the installation procedure by reading all of the instructions.

2. The exploded views (Pages 8-10) provides only general guidance. Refer to each step and section diagram in this manual for proper instruction.

3. Throughout this manual, the left side of the vehicle refers to the driver’s side, and the right side to the passenger’s side.

4. Disconnect the negative (ground) cable from the battery (or batteries, if there are more than one) before beginning work. The OEM battery clamp can be removed using a 10mm socket or wrench.

5. Route and tie wires and hoses a minimum of 6" away from exhaust heat, moving parts and sharp edges. Clearance of 8" or more is recommended where possible.

6. During installation, keep the work area clean. Do not allow anything to be dropped into intake, exhaust, or lubrication system components while performing the installation, as foreign objects will cause immediate engine damage upon start-up.

For More Information please call (888) 635-4565 or Visit Us Online www.bankspower.com
Disclaimer of Liability

Gale Banks Engineering Inc. and its distributors, employees, and dealers (hereafter “SELLER”) shall in no way be responsible for the product’s proper use and service. The BUYER hereby waives all liability claims.

The BUYER acknowledges that he/she is not relying on the SELLER’s skill or judgment to select or furnish goods suitable for any particular purpose and that there are no liabilities which extended beyond the description on the face hereof and the BUYER hereby waives all liability claims.

The BUYER acknowledges that he/she is not relying on the SELLER’s skill or judgment to select or furnish goods suitable for any particular purpose and that there are no liabilities which extended beyond the description on the face hereof and the BUYER hereby waives all liability claims.

Limitation of Warranty

Gale Banks Engineering Inc. (hereafter “SELLER”), gives Limited Warranty as to description, quality, merchantability, fitness for any particular purpose, productiveness, or any other matter of SELLER’s product sold herewith. The SELLER shall be in no way responsible for the product’s open use and service and the BUYER hereby waives all rights except those expressly written herein. This Warranty shall not be extended or varied except by written instrument signed by SELLER & BUYER.

Please see enclosed warranty information card, or go to www.bankspower.com/warranty for warranty information regarding your product. All products that are in personal injury or damages.
question of Warranty must be returned shipping prepaid to the **SELLER** and must be accompanied by a dated proof of purchase receipt. All Warranty claims are subject to approval by Gale Banks Engineering Inc.

Under no circumstance shall the **SELLER** be liable for any labor charged or travel time incurred in diagnosis for defects, removal, or reinstallation of this product, or any other contingent expense.

Under no circumstances will the **SELLER** be liable for any damage or expenses incurred by reason of the use or sale of any such equipment.

**IN THE EVENT THAT THE BUYER DOES NOT AGREE WITH THIS AGREEMENT:**

The **BUYER** may promptly return this product, in a new and unused condition, with a dated proof-of-purchase, to the place-of-purchase within thirty (30) days from date-of-purchase for a full refund, less shipping and/or restocking fee.

The installation of this product indicates that the **BUYER** has read and understands this agreement and accepts its terms and conditions.

Section 1.2
DERRINGER SENSOR HARNESS INSTALLATION

Required Tools & Materials
• Zip-ties (6” or longer)
• Wire Coat Hanger
• Exacto Knife (or equivalent)
• Electrical Tape

1. Ensure the Engine Control Module (ECM) is not powered by disconnecting the batteries. If the ECM is powered on with sensors disconnected, the vehicle will have Diagnostic Trouble Codes (DTCs).

2. Locate the MAP sensor, on the top of the intake manifold near the windshield cowl.

3. Locate the fuel pressure sensor. It is below the blue coupling on the intercooler tube, at the end of the common fuel rail. The common fuel rail runs alongside the valve cover on the drivers side.

4. Route the Derringer harness (Fig 1.2-2) and connect the female connectors to the sensor and male connectors to the OEM harness.

WARNING!
Ensure the engine bay is cool
Remove keys from the ignition.
Disconnect the battery GROUND (-) cables (Figure 1.2-4). Secure the cables so that they do not come in contact with the battery posts during the installation.

NOTE: If the ECU is powered on when the sensors are disconnected, your vehicle will show diagnostic trouble codes.

Figure 1.2-2
Section 1.2
STARTER CABLE FIREWALL INSTALLATION

1. Route the Starter Cable through the firewall.
   
   A. Locate the OEM wire harness grommet on the driver side firewall, and make an incision on the grommet near the outer edge from the engine bay side (Fig 1.2-3).

   CAUTION
   Ensure the cut is made away from the harness to avoid cutting or damaging the wires.

   B. Make a small hook on the end of the straightened wire coat hanger. Loop the hook around the Starter Cable (Fig 1.2-5) and wrap it with electrical tape to secure the ends.

   C. From the engine bay side, push the wire coat hanger through the incision in the grommet, starting with the opposite side of the hook. Pull the wire coat hanger from inside of the cab, so that the Starter Cable goes through the firewall.

   D. Ensure there is enough of the Starter Cable length in the cab (~ 4ft) to route to the iDash 1.8 or Switch.
1. Connect the **Derringer Module** to the **Derringer Sensor Harness** and the **Starter Cable**. See **Figure 1.3-1**.

2. If using the **3-position switch**, install the **Gray Dust Cap** on the **Derringer Module**. See **Figure 1.3-1**.

3. If using the **iDash 1.8**, install the **Black Terminator Cap** on the **Derringer Module**. See **Figure 1.3-1**.

![Figure 1.3-1](image-url)
Section 1.3
DERRINGER TUNER INSTALLATION, CONTINUED

4. Rotate the locking ring counterclockwise towards the 12 o’clock position then connect the mating ends together ensuring proper alignment using the 12 o’clock marks. See Figure 1.3-2

5. Then rotate the locking ring clockwise until you feel a click. See Figure 1.3-3.

6. Locate a place to secure the Derringer module near or along the fender, then zip-tie it in place. Ensure the LED indicator is viewable in the selected location. Secure any extra cable of the Derringer Sensor Harness without pinching the harness.

   **NOTE:** The pictured mounting location of the Derringer Tuner is optional. It is best to mount it close to the firewall and route the harness along the OEM harness.

7. Check all connectors for proper installation, then connect the battery terminal(s).
Section 1.4
IN-CAB INSTALLATION

1. Plug the OBD-II Cable into the OBD-II port located under the dash. See Figure 1.4-1.

2. Route the Starter Cable and OBD-II Cable to the dash.

3. Remove the side dash cover to store any excess wire. See Figure 1.4-2, 1.4-3.
Section 1.4
IN-CAB INSTALLATION, CONTINUED

For The Stand-Alone Tuner Configuration with Switch

1. Connect the Switch Cable to the Starter Cable and OBD-II Cable. See Figure 1.4-4, 1.4-5.

2. If not installing the switch back-plate, fasten the switch in any easy to access location for power level adjustment.

3. Optional switch back-plate install:
   A. Install the power level plate to the switch. Make sure to align the slot of the switch with the red line on the plate towards Sport. See Figure 1.4-6.
   B. Mount the switch in dashboard by drilling two holes using the supplied template. See page 47.

   CAUTION

   DO NOT damage factory wiring behind the dashboard. Inspect behind dash before drilling.

   C. To keep the switch from rotating, it is necessary to install the locking tab washer behind the dash, with the locking tab facing the
backside of the dash face.

**For iDash 1.8” Configuration**

1. Connect the Starter Cable to the iDash 6-Pin Port.

2. Check for the pre-installed Jumper Block to the iDash 2-Pin termination. See **Figure 1.4-10**.

3. Connect the Y-Cable to the 6-pin port of the first and second iDash 1.8 (without the In-Cab Terminator). See **Figure 1.4-11**
   
   A. Connect the Starter Cable to the Y-Cable. See **Figure 1.4-11, Step 3C**.
   
   B. Remove extra Jumper Blocks from the secondary iDash 2-Pin terminations. See **Figure 1.4-10**.

4. Install the iDash 1.8 in an A-pillar mount or a suction cup windshield-mount gauge-pod.

**NOTE:** Only one Jumper Block Terminator is required.
Section 1.4
IN-CAB INSTALLATION, CONTINUED

Figure 1.4-11

NOTE: ONLY TWO TERMINATORS ARE REQUIRED FOR THE B-BUS NETWORK (BLACK TERMINATION CAP IN THE ENGINE BAY AND A JUMPER BLOCK TERMINATOR).
Section 1.5
DERRINGER TUNER CONNECTION CHECK

Check for proper device operation.
1. While the engine is running, check the LED indicator on the Derringer.
   A. Under proper operation the LED will be solid GREEN.
   B. If the LED is always off or blinking RED refer to “Section 3: Troubleshooting” on page 24.

2. If connected to the iDash 1.8, load the “Derringer” layout (See Figure 1.5-2) and use the UP and DOWN arrow buttons to adjust the power level settings. See Figure 2-1.

If the power level cannot be adjusted, refer to “Section 3: Troubleshooting” on page 24.

Figure 1.5-1

Figure 1.5-2
SECTION 2.0
Derringer Tuner Operation
Setting Desired Power Level:
The Derringer is equipped with multiple power levels. You can set the desired power level while the engine is running but it is recommended that you do not switch the power level under high load applications.

Switch configuration:
There are 3 power levels (Sport, Plus and Stock) when configured with a switch.

iDash 1.8 configuration:
When the Derringer is connected to an iDash 1.8, there are a total of 6 power levels (level 6, 5, 4, 3, 2 and stock). The power level can be changed by pressing the **UP** and **DOWN** buttons at any time. If you have the derringer layout loaded, you will see the power level change at the bottom left corner (See Figure 2-1). If you have any other layout loaded, a message box will pop up to notify you of the power level change.

**SPORT MODE/LEVEL 6 (switch up/towards slot)**
This mode is to be used when peak engine performance is required. This mode has been optimized for maximum power output along with improved turbo response by tuning fuel delivery and boost.

**PLUS MODE/LEVEL 3 (switch down/away from slot)**
The plus calibration is designed for use in everyday driving. This power level adds a noticeable punch under high load acceleration by improving turbo response and power. Power in this mode can be sustained for a prolonged duration.

**STOCK MODE (switch middle)**
Stock mode turns OFF your Derringer tuner. Throttle response and power return to stock levels.

Banks ActiveSafety®
Anytime aftermarket electronics are introduced to your vehicle, it is important to know that they are not going to cause damage. Banks builds in a suite of ActiveSafety features to safeguard your vehicle:

- Software that monitors and diagnoses itself to ensure proper function.
- Self-monitoring hardware that provides automatic bypass should something malfunction.

The Derringer Tuner module monitors multiple parameters and adjusts its output controls to protect the driveline. The Derringer Tuner monitors engine coolant temperature (ECT) and will limit the additional power that it provides anytime the ECT is outside of optimal operating range to protect the engine.
Power Added (%):

If connected to an iDash 1.8 while displaying the “Derringer” layout, the vertical bar graph on the right hand side represents, in real-time, how much power the Derringer is adding (See Figure 2-2). In Stock Mode there will be no change to the bar graph and in Sport Mode/Level 6 the bar graph will reach 100% under proper operating conditions. Percent power added is effected by safety features such as Engine Coolant Temperature, Exhaust Gas Temperature, Regen., and various transmission parameters, so it might not always fully reach 100%. The “Power Added” data can also be displayed on ANY layout as a numeric value by selecting it from the “Derringer” category of parameters.

Figure 2-2

Automatic Transmission Learning:

6.7L Ford Trucks equipped with the 6R140 6-speed automatic transmission use an adaptive shift control logic. After initial installation of the Derringer Tuner, wide open throttle shifts may feel soft when switching to higher power levels. Also, when switching to lower power levels, shifting may feel harsher. Continued use at a single power level will provide more consistent shifting performance.

To accelerate the learning process perform the following sequence at a location where it is safe to accelerate without exceeding the posted speed limit.

1. Set the Derringer Tuner to Stock Mode power setting, start the truck and allow the engine to reach normal operating temperature.

2. Adjust the Derringer Tuner to Plus Mode/Level 3 power setting.

3. Drive your vehicle for 5-10 miles, ensuring a complete shift cycle through each gear (The transmission shift learning process requires 15-30 complete shift cycles to learn a new shift program).

4. Increase power level to Sport Mode/Level 6 and repeat Step 3.
SECTION 3.0
Troubleshooting
Section 3.0
TROUBLESHOOTING

Normal Operation
Your Derringer Tuner has a built-in, self-diagnostic system. The status of the Derringer system is communicated via the LED on the module. When the Derringer Tuner is functioning properly the LED will be solid GREEN.

Derringer Not Powered
When the LED is not illuminated, the Derringer Tuner is not powered on. If the ignition is on and the LED is not illuminated, check the TMAP connections on the vehicle and ensure they are fully engaged.

No Communication with iDash 1.8
Check that your wiring matches the figure in Section 1.1 Wiring Diagram: iDash 1.8” Configuration (See page 10) or for multiple iDash 1.8 Gauges see Figure 15 on page 17.

Common sources of communication errors are wrong caps attached to the Derringer and/or the 2-Pin Termination is not installed. A Black Termination Cap must be connected to the Derringer in correct orientation when used with iDash 1.8’s.

Derringer Power Mode
When the Derringer Tuner is initially powered on, the LED flashes ORANGE for the first 30 seconds to indicate the Power Mode. Power Mode can aide in diagnosing harness connection or hardware issues. Power Mode code can be determined by counting the number of ORANGE flashes, and the sequence will repeat after a 4 seconds pause.

</tr>
</tbody>
</table>

LED Error Code
When faults are detected, the Derringer Tuner will flash a diagnostic code. Diagnostic codes are comprised of 2 digits. Each digit is expressed by the flashing RED LED.

A code can be determined by counting the number of RED flashes displayed before the LED flashes GREEN for the first digit and the number of RED flashes after the LED flashes GREEN for the second digit. After the diagnostic code is displayed, additional codes will be displayed in sequence, separated by 4 seconds with the LED off. Once all codes are displayed the Derringer will begin sending the codes again. Once you have written down all diagnostic codes being displayed, consult the following tables for a description of the code along with the action to be taken.
