FRAMELESS CONTINUOUS HINGE SHOWER ENCLOSURE QCI5233

INSTALLATION NOTES: Unpack your unit carefully and inspect for freight damage. Lay out and identify all parts using the instruction sheet as a reference. Before discarding the carton, check to see that no small hardware parts have fallen to the bottom of the box. If any parts are damaged or missing, refer to the descriptions noted in the instructions when contacting your dealer for replacements.

Handle the glass panel(s) carefully and protect the edges.

Please wear safety glasses whenever drilling or cutting. When drilling holes in ceramic tile or marble, use a center punch and hammer to carefully break the surface glaze so the drill bit can start without skidding.

To install your Shower Enclosure, you will need the following: tape measure, level(s), #2 Phillipshead screwdriver, drill, 1/8" & 3/16" High Speed Steel drill bits, hacksaw, pencil, sharp knife or razor blade and caulking (clear, mildew resistant silicone recommended). Optional tools include a miter box for cutting metal parts, file, center punch and masking tape. An additional 3/16" Masonry drill bit is recommended for tiled applications.

The door is best installed with two people.

NOTE: Tempered glass cannot be cut.

Although safety tempered glass is very resistant to breakage, the glass can still break if unequal pressure is placed on it during installation. Use caution! In addition, the sharp corners of the glass panels can damage tile and floor surfaces, so its best to handle the glass panels carefully and protect the edges.

MAINTENANCE: Two primary materials are used to manufacture your new Shower Enclosure: tempered glass and anodized aluminum. To assure a long lasting finish on the enclosure, wipe it down with a towel after each use. Never use a scouring agent to clean the aluminum.

For occasional, more concentrated cleaning efforts, we recommend using *LYSOL*TM Non-Abrasive Bathroom Cleaner works extremely well. Be sure that any over spray falling on the aluminum frame is rinsed thoroughly and dried. Many over-the-counter cleaners, if applied to aluminum and left on, will harm the finish and cause permanent damage, even though their directions indicate safe use on shower doors. For more care and cleaning information, please visit our website;

For glass treated with AquaGlideTM, read the following instructions:

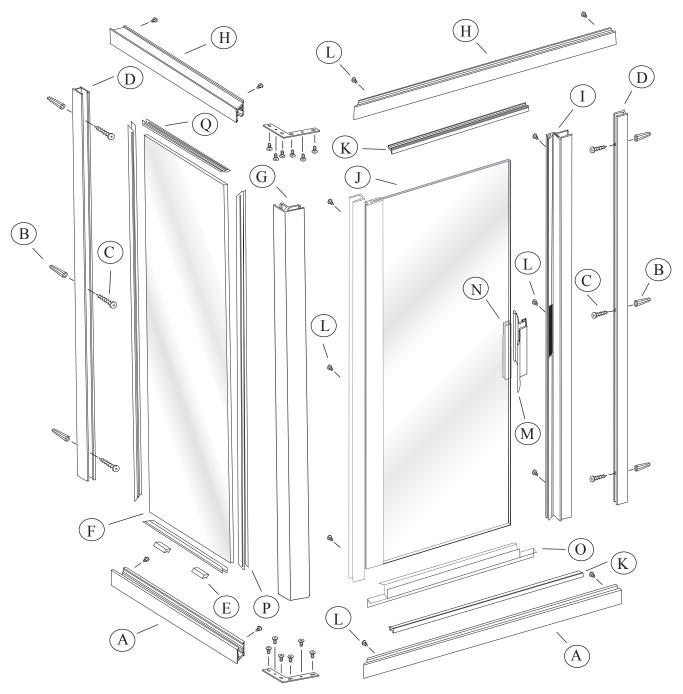

After each use of your shower, use a small plastic bowl, pitcher or a hand held shower head to spray the shower doors with clean cold water. Pour or spray the cold water along the top edge of the glass. The majority of the shower's soapy residual water will drain off. Use a small hand towel to pat dry the remaining droplets or use a squegee to clear the droplets.

Once a month, use a nylon sponge to go over the wet glass, rubbing in a circular motion. You should feel "sticky" places going back to slick again. Then pour water along the top edge of the glass, as you do after each shower use.

Parts List

- A. Curb (w/ weep holes) (1)
- B. Plastic wall anchor (6)
- C. #8 x 1 1/2" Truss Head Screw (6)
- D. Wall Jamb (2)
- E. Plastic Setting Block (2)**
- F. Stationary Glass Panel (1)
- G. Corner Post (1)
- H. Header (1)
- I. Strike Jamb (w/ vinyl & magnet) (1)
- J. Door Panel Assembly (1)
- K. Snap-in Filler (2)

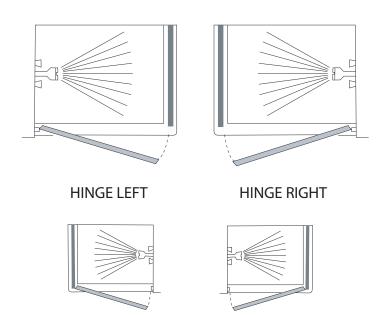

- L. #8 x 1/4" Truss Head Screw (9)
- M. Handle (w/ Strike Plate) (1)
- N. Handle Vinyl (1)
- O. Clear Vinyl Sweep (1)
- P. Vertical Glazing Vinyl (4)**
- Q. Horizontal Glazing Vinyl (4)**

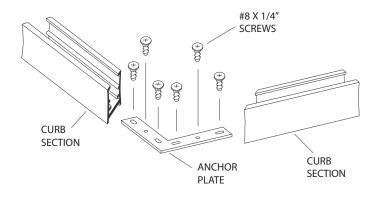

1 The Continuous Hinge Shower door panel is completely reversible and may be installed hinge right or hinge left, off the wall or the corner post. Using the illustration, determine the proper hinge side for the door. This instruction sheet depicts a hinge-right installation. Careful as to not follow the illustrations exactly.

CAUTION: For safety reasons, the door must *always open outward*.

TIP: Temporarily cover the drain on the inside of the shower with some tape or a large piece of cardboard to prevent small screws, drill bits, etc. from disappearing.

Assemble the two curb sections (w/ weep holes) [A] by sliding an anchor plate into the mitered ends and forcing the sections together. The weep slots in the curb must be to the inside. Using the *slotted* holes in the anchor plate as a guide, drill matching 1/8" holes into the curbs. Be sure the mitered ends are tight against each other. Secure the anchor plate to the curb sections with four #8 x 1/4" truss head screws [L]. Be sure there is no gap in the mitered joint when tightening. Drill and install two screws through the round holes in the bracket as well.

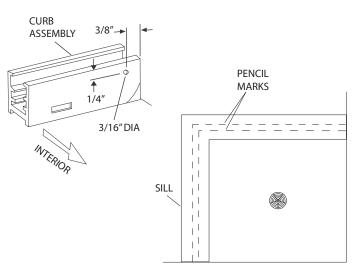

Assemble the two header sections [H] in the same manner.

3 Place the curb assembly on the shower sill. The assembled curb will sit near or on the centerline of the shower sill. If required, use a file to round the ends of the curb assembly to tightly fit the shower opening.

Using a 3/16" high speed steel drill bit, drill the interior face of the curb *at both ends* as shown. These holes may be predrilled from the factory.

Place the curb assembly back on the shower sill and mark its location with a pencil along the interior and exterior the full length of both curb sections.

Place one wall jamb [D] into the curb against the wall. Using a level, plumb the wall jamb and mark the hole locations on the wall with a pencil. Repeat this step for the other wall jamb. Remove all parts and drill the holes. **TIP:** Tape can be used to temporarily hold the curb in place.

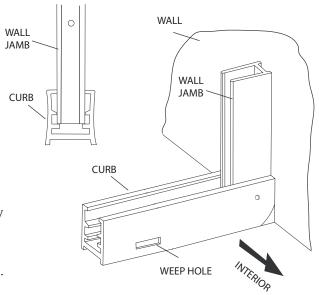

Tile or marble walls:

Drill 3/16" diameter holes into the walls and insert the plastic wall anchors [**B**].

Fiberglass or acrylic units can be done two different ways.

If the walls are not reinforced, drill 3/16" diameter holes and insert the plastic wall anchors. (Toggle bolts may be used instead but they are not provided).

If the walls are reinforced, only drill 1/8" diameter holes.

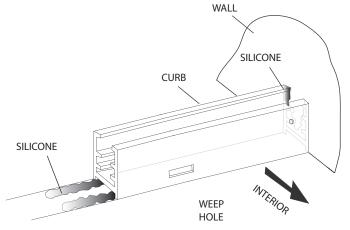

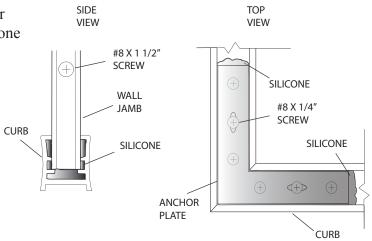

Wipe the shower walls, sill, curb & wall jambs with a clean, dry cloth to remove any dust or debris. Apply a 1/4" bead of silicone along the inside of the pencil lines that were marked in Step #2. Carefully place the curb on the sill, over top the silicone, in the position marked.

Silicone the inside of the curb at both ends where it meets the wall, over the anchor plate and screws as well as the inside of the mitered joint.

TIP: Angle the tip of the silicone tube so that silicone fills under the two "legs" in the curb that the wall jambs sit on and anchor plate slides into. Smooth out with your finger to remove possible air pockets and force the silicone into the cracks and crevases.

Replace both wall jambs and attach them to the walls with the six $\#8 \times 1 \times 1/2$ " truss head screws [C].

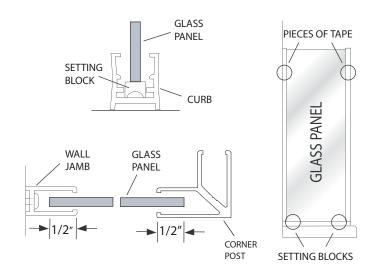

Place two setting blocks [E] into the curb assembly, flat side up, on the return side to support the fixed glass panel [F]. Position the blocks 3" from each corner of the glass panel. Set the panel into place on the setting blocks and slide the panel about a 1/2" into the wall jamb. A piece of tape positioned a 1/2" from the vertical edge will help placement.

NOTE: Patterned glass panels should be installed with the rough or patterned surface on the exterior of the enclosure.

Place the corner post **[G]** into the curb assembly. It should overlap the glass by 1/2". Use masking tape to temporarily hold it in place.

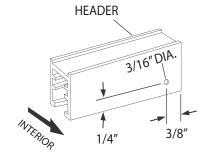

NOTE: Depending on out-of-plumb wall conditions, the 1/2" overlap might vary from 1/4" to 3/4". Use a level to determine if this is necessary.

NOTE: If the Quick N' Stall option was selected, the setting blocks are not used. Set the glass panel in place and press down firmly until it snaps into the curb.

Using a 3/16" high-speed steel drill bit, drill the interior face of the header assembly on both ends where it meets the wall as shown.

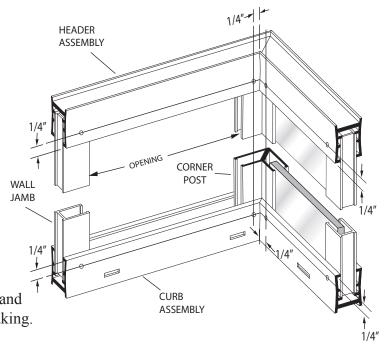

These holes may be predrilled from the factory.

8 Press the header assembly over the wall jambs and corner post. Check both sides of the post for plumb. Adjust as required by varying the overlap of the header over the wall jambs.

Using the 3/16" holes in the ends of the header and curb as a guide, drill four 1/8" holes into the wall jambs. Also, drill two holes thru the header and curb and into the corner post as shown. Enlarge the holes in the header and curb only, not the post, to 3/16" to allow for clearance of the screws. Secure the header and curb to the wall jambs and corner post using eight #8 x 1/4" truss head screws [L].

CAUTION: Slide the glass panel away from the wall and post when drilling to prevent the glass panel from breaking.

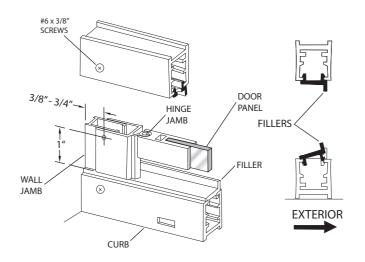

9 Slide the strike jamb [I] over the corner post or the wall jamb, depending on hinge orientation. Use a piece of tape to temporarily hold in place.

Orient the door to the opening (either hinge right or hinge left). Grab the door from the inside (the open side of the hinge jamb should be away from you).

Carefully lift the door [J] into the opening and slide the hinge jamb over the wall jamb or the corner post.

Holding the door in the open position, press the snap-in fillers [K] into the header and the curb, WITH THE RAISED LIP TO THE EXTERIOR. (see illustration)

10 Center the door in the opening by sliding the hinge jamb over the wall jamb or the corner post until the hinge jamb is **plumb** and the space between the door glass and header is **even** from hinge side to strike side.

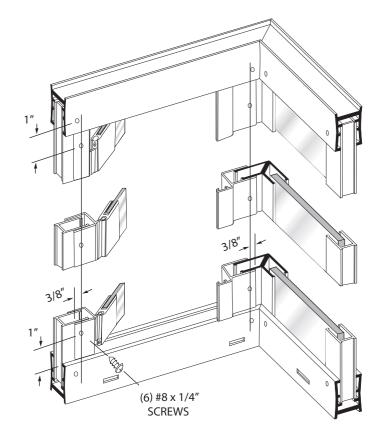

From the inside of the enclosure, drill two 1/8" holes thru the hinge jamb and into the post or jamb approximately 1" from the ends of the hinge jamb at the top and bottom and approximately 3/8" from the edge of the open side of the hinge jamb (see illustration). Drill a third hole in line with the first two and centered between them. Enlarge the three holes in the *hinge jamb only* with a 3/16" drill bit for clearance of the truss head screws.

CAREFUL: **DO NOT** enlarge the holes in the wall jamb or the corner post.

Attach the hinge jamb permanently with three #8 x 1/4" truss head screws.

Slide the snap-in fillers tight against the hinge jamb. Slide the strike jamb tight against the snap-in fillers. With the hinge jamb plumb and both fillers tight between both jambs, the strike jamb will also be plumb and parallel to the hinge jamb.

Drill and attach the strike jamb in the same manner as the hinge jamb.

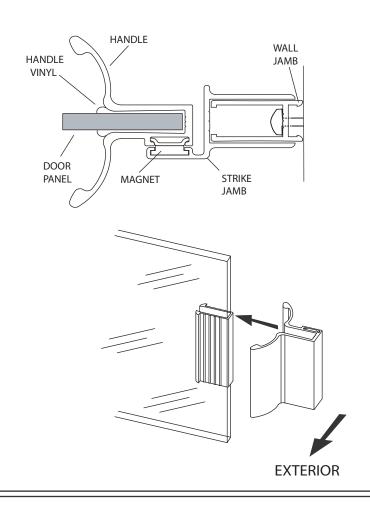

11 Slide the door handle [M] onto the strike side of the door panel. Close the door and slide the handle up and down until the magnet and strike plate are aligned. Use a pencil and/or masking tape to mark the location of the handle on the door.

Place the vinyl material [N] over the strike edge of the door and carefully drive the handle onto the door panel using a rubber or plastic mallet.

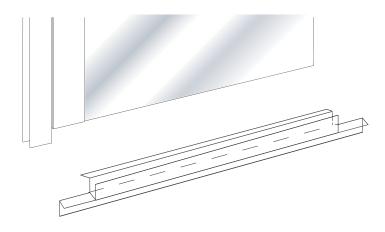

Close the door and check for proper operation of the handle and magnet. (If adjustment is needed, use a rubber or plastic mallet and a wood block and lightly tap into place). Trim the excess vinyl off with a utility knife.

NOTE: NEVER hit the door latch with a metal hammer!!

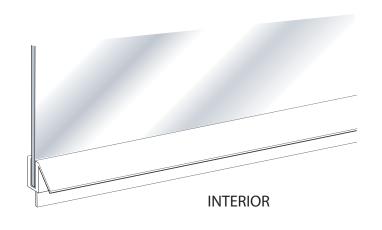

12 NOTE: The clear vinyl sweep [O] is notched on both ends. Installation depends on the hinge side.

With the door in the open position, slide the sweep onto the bottom of the door with the deflector lip on the interior and the notched side under the metal hinge rail of the door.

13 Mark on the sweep the strike edge of the glass with a pencil.

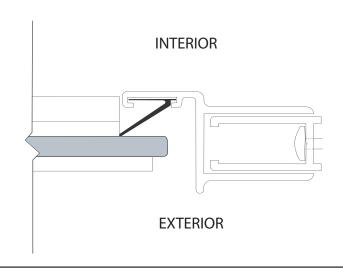

Remove the sweep from the door and cut the it even with the strike edge of the glass.

13 Place the sweep back onto the bottom of the door. Step inside the shower and close the door. Mark on the sweep at the edge of the strike jamb.

Open the door and remove the sweep. Trim the deflector lip and the inside portion of the sweep.

Replace the sweep and close the door. Check for clearance. The vertical strike jamb vinyl should touch the glass not the sweep. (see illustration)

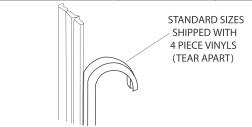

14 Inspect the strips of black glazing vinyl and note the two different profiles. The flat shaped vinyl [P] is installed vertically and the crescent shaped vinyl [Q] is installed horizontally. There should be a total of four (4) individual vertical and four (4) individual horizontal pieces of vinyl about a 1/2" wide each. (May need to peel apart from a wider strip).

These vinyls are designed to fit tightly between the glass and metal frame. **TIP:** Wet the glass and vinyl with water or glass cleaner immediately before installing vinyl and use a small block of wood to press the vinyl into place.

NOTE: Different glass sizes require different vinyl. Refer to the chart for clarification if installation is extremely difficult.

FIXED GLASS PANEL	VERTICAL	HORIZONTAL
1/4" GLASS REQUIRES :	V-219	V-220
3/16" GLASS REQUIRES :	V-226 GROOVE	V-225 GROOVE

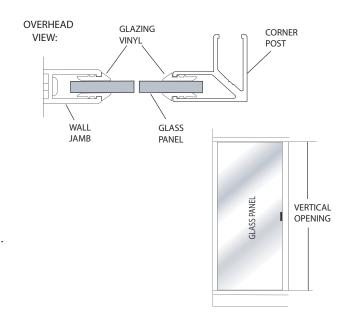

15 Cut the four (4) pieces of vertical vinyl [P] 1" longer than the vertical opening. Verify that the depth of the glass into the post and wall jamb is sufficient and even (refer to Step #5).

Starting on the exterior, slide one end of the vertical vinyl up into the header and press into the wall jamb about 6" down

Apply light pressure against the interior of the glass panel to hold the exterior vinyl in place and install the vinyl on the interior in a similar fashion. Press the vinyl into the wall jamb alternating between the interior and exterior. Remove the tape from glass surface before installing the vinyl.

Caution: Do not to stretch the vinyl when pressing into place.

Repeat above steps for the corner post.

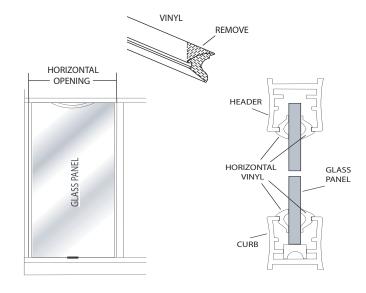

16 Cut four (4) pieces of the horizontal vinyl [Q] 1/2" longer than the horizontal opening. Cut both ends of the vinyl with a back mitre so that they sit tight against the face of the vertical vinyl. (see illustration)

Starting at the top on the exterior, place the vinyl against the glass (open side against glass) and press into the header at both corners. Continue pressing vinyl into the header from both ends working toward the middle.

Install the top interior vinyl in a similar fashion.

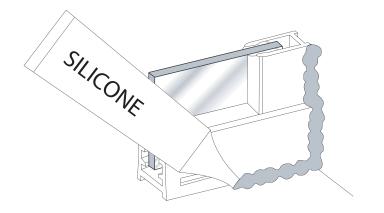

Repeat above steps for the bottom of the panel.

17 Carefully silicone the seam between the walls and the wall jambs as well as the curb and threshold on the inside of the shower.

NOTE: Silicone on the exterior seam is optional.

DO NOT USE the shower until the silicone is completely cured. Check the tube of silicone for the manufacturer recommended cure time. (typically 24 - 48 hours)

NOTE: Do not silicone over the weep holes
