Framed Door & Return Panel
Shower Enclosure
QCI5234
MAINTENANCE: Two primary materials are used to manufacture your new enclosure: tempered glass and anodized aluminum. To assure a long lasting finish on the enclosure, wipe it down with a towel after each use. Never use a scouring agent to clean the aluminum.

For occasional, more concentrated cleaning efforts, we find that Maintain AquaGlideXP Spray Cleaner helps minimize water stains and oxidation. Maintain is not only extremely effective at enhancing the long term performance of glass coated with AquaGlideXP, it can aid in cleaning untreated glass as well. Ask your distributor about Maintain Spray or visit www.bascoshowerdoor.com/warranty-and-care/care-and-cleaning.aspx to purchase online.

Many over the counter cleaners, if applied to aluminum and left on, will harm the metal finish and cause permanent damage, even though their directions indicate safe use on shower doors. Be sure that any over spray falling on the aluminum frame is rinsed thoroughly and dried.

INSTALLATION NOTES: Unpack your unit carefully and inspect for freight damage. Lay out and identify all parts using the instruction sheets as a reference. Before discarding the carton, check to see that no small hardware parts have fallen to the bottom of the box. If any parts are damaged or missing, refer to the descriptions noted in the instructions when contacting your dealer for replacements.

Handle the glass panels carefully and protect the edges. Safety tempered glass is very resistant to breakage, but the sharp corners of the panels can damage tile and floor surfaces.

Please wear safety glasses whenever drilling or cutting. When drilling holes in the ceramic tile or marble use a center punch and hammer to carefully break the surface glaze so the drill can start without skidding.

To install your Shower Door you will need the following: tape measure, level, #2 Phillips screwdriver, 3/16” wrench, drill, 1/8” and 3/16” drill bits, hacksaw, pencil, and caulking (clear silicone recommended). Optional tools include a miter box for cutting parts to length, files, center punch, and masking tape. For drilling tile a 3/16” masonry bit is recommended.

NOTE: Tempered glass cannot be cut.

INDENTIFICATION GROOVE

NOTE: Each magnetic strip has an identification groove on the exposed surface. For proper alignment, the grooves should be opposite each other (see detail).

Identification Groove
Parts List

A. Curb (w/ weep holes) (1)
B. Plastic wall anchor (6)
C. #8 x 1 1/2” Truss Head Screw (6)
D. Wall Jamb (2)
E. Plastic Setting Block (2)
F. Stationary Glass Panel (1)
G. Corner Post (1)
H. Header (1)
I. #8 x 1/4” Truss Head Screw (14)
J. Strike Jamb (w/ magnet) (1)
K. Door Panel Assembly (1)

L. Snap-in Filler (2)
M. Drip Rail (1)
N. Double Stick Tape (1)
O. Tapered Drip Vinyl (1)
P. #6 x 3/8“ Pan Head Screw (1)
Q. Drip Plugs (1)
R. Interior Door Handle (1)
S. Exterior Door Handle (1)
T. #6-32 x 1 1/4” Round Head Screw (2)
U. Vertical Glazing Vinyl (4)
V. Horizontal Glazing Vinyl (4)
The Continuous Hinge Shower door panel is completely reversible and may be installed hinge right or hinge left, off the wall or the corner post. Using the illustration, determine the proper hinge side for the door. This instruction sheet depicts a hinge-right installation. Careful as to not follow the illustrations exactly.

**CAUTION**: For safety reasons, the door must *always open outward*.

**TIP**: Temporarily cover the drain on the inside of the shower with some tape or a large piece of cardboard to prevent small screws, drill bits, etc. from disappearing.

---

2. Assemble the two curb sections (w/ weep holes) [A] by sliding an anchor plate into the mitered ends and forcing the sections together. The weep slots in the curb must be to the inside. Using the *slotted* holes in the anchor plate as a guide, drill matching 1/8” holes into the curbs. Be sure the mitered ends are tight against each other. Secure the anchor plate to the curb sections with four #8 x 1/4” truss head screws [I]. Be sure there is no gap in the mitered joint when tightening. Drill and install two screws through the round holes in the bracket as well.

Assemble the two header sections [H] in the same manner.

---

3. Place the curb assembly on the shower sill. The assembled curb will sit near or on the centerline of the shower sill. If required, use a file to round the ends of the curb assembly to tightly fit the shower opening.

Using a 3/16” high speed steel drill bit, drill the interior face of the curb at both ends as shown. These holes may be pre-drilled from the factory.

Place the curb assembly back on the shower sill and mark its location with a pencil along the interior and exterior the full length of both curb sections.
4 Place one wall jamb [D] into the curb against the wall. Using a level, plumb the wall jamb and mark the hole locations on the wall with a pencil. Repeat this step for the other wall jamb. Remove all parts and drill the holes. **TIP:** Tape can be used to temporarily hold the curb in place.

Tile or marble walls:
Drill 3/16” diameter holes into the walls and insert the plastic wall anchors [B].

Fiberglass or acrylic units can be done two different ways.
If the walls are not reinforced, drill 3/16” diameter holes and insert the plastic wall anchors. (Toggle bolts may be used instead but they are not provided).

If the walls are reinforced, only drill 1/8” diameter holes.

5 Wipe the shower walls, sill, curb & wall jambs with a clean, dry cloth to remove any dust or debris. Apply a 1/4” bead of silicone along the inside of the pencil lines that were marked in Step #2. Carefully place the curb on the sill, over top the silicone, in the position marked.

Silicone the inside of the curb at both ends where it meets the wall, over the anchor plate and screws as well as the inside of the mitered joint. **TIP:** Angle the tip of the silicone tube so that silicone fills under the two “legs” in the curb that the wall jambs sit on and anchor plate slides into. Smooth out with your finger to remove possible air pockets and force the silicone into the cracks and crevasses.

Replace both wall jambs and attach them to the walls with the six #8 x 1 1/2” truss head screws [C].
6 Place two setting blocks [E] into the curb assembly, flat side up, on the return side to support the fixed glass panel [F]. Position the blocks 3” from each corner of the glass panel. Set the panel into place on the setting blocks and slide the panel about a 1/2” into the wall jamb. A piece of tape positioned 1/2” from the vertical edge will help placement.

**NOTE:** Patterned glass panels should be installed with the rough or patterned surface on the exterior of the enclosure.

Place the corner post [G] into the curb. It should overlap the glass by 1/2”. Use masking tape to temporarily hold it in place.

**NOTE:** Depending on out-of-plumb wall conditions, the 1/2” overlap might vary from 1/4” to 3/4”. Use a level to determine if this is necessary.

7 Using a 3/16” high-speed steel drill bit, drill the interior face of the header assembly on both ends where it meets the wall as shown. These holes may be pre-drilled from the factory.

8 Press the header assembly over the wall jambs and corner post. Check both sides of the post for plumb. Adjust as required by varying the overlap of the header over the wall jambs.

Using the 3/16” holes in the ends of the header and curb as a guide, drill four 1/8” holes into the wall jambs. Also, drill two holes through the header and curb and into the corner post as shown. Enlarge the holes in the header and curb only, not the post, to 3/16” to allow for clearance of the screws. Secure the header and curb to the wall jambs and corner post using eight #8 x 1/4” truss head screws [I].

**CAUTION:** Slide the glass panel away from the wall and post when drilling to prevent the glass panel from breaking.

**NOTE:** If the Quick N’ Stall option was selected, the setting blocks are not used. Set the glass panel in place and press down until it snaps into the curb.
9. Slide the strike jamb [J] over the corner post or the wall jamb, depending on hinge orientation. Use a piece of tape to temporarily hold in place.

Orient the door to the opening (either hinge right or hinge left). Grab the door from the inside (the open side of the hinge jamb should be away from you).

Carefully lift the door [K] into the opening and slide the hinge jamb over the wall jamb or corner post.

Holding the door in the open position, press the snap-in fillers [L] into the header and the curb, WITH THE RAISED LIP TO THE EXTERIOR. (see illustration)

10. Center the door in the opening by sliding the hinge jamb over the wall jamb or corner post until the hinge jamb is **plumb** and the space between the door glass and header is **even** from hinge side to strike side. From the inside of the enclosure, drill two 1/8” holes through the hinge jamb and into the post or jamb approximately 1” from the ends of the hinge jamb at the top and bottom and approximately 3/8” from the edge of the open side of the hinge jamb (see illustration). Drill a third hole in line with the first two and centered between them. Enlarge the three holes in the *hinge jamb only* with a 3/16” drill bit for clearance of the truss head screws.

**CAREFUL: DO NOT** enlarge the holes in the wall jamb or the corner post.

Attach the hinge jamb permanently with three #8 x 1/4” truss head screws.

Slide the snap-in fillers tight against the hinge jamb. Slide the strike jamb tight against the snap-in fillers. With the hinge jamb plumb and both fillers tight between both jambs, the strike jamb will also be plumb and parallel to the hinge jamb.

Drill and attach the strike jamb in the same manner as the hinge jamb.
11 Clean the bottom door rail and the drip rail [M] thoroughly with denatured alcohol to ensure proper adhesion. Unroll the double stick tape [N] and carefully apply it to the flat back side of the drip rail. (DO NOT peel the tape backing yet)

Insert the tapered drip vinyl [O] with the short side of the vinyl on the hinge side of the rail.

Position the drip rail so that the bottom is flush with the bottom of the door rail on the hinge side, and is 1/16” from the continuous hinge jamb. (see illustration)

Raise the drip rail on the strike side until the bottom edge of the tapered drip vinyl is parallel to the curb. Mark the horizontal location of the drip rail on both sides.

12 Hold the drip rail in place and adjust the drip vinyl by sliding it left or right until it there is a 1/16” gap between the bottom of the vinyl and the top of the snap-in-filler. Trim the vinyl flush with the hinge side of the rail and 3/8” longer on the strike side. Notch the top of the drip vinyl. (see illustration)

Install the #6 x 3/8” screw [P] into the hinge side of the drip rail. Separate the two drip plugs [Q] and install the correct one into the strike side of the drip rail. Discard the other unused plug.

Peel off the tape backing and carefully press the drip rail assembly to the door in the marked position.

TIP: Place a small bead of silicone along the top of the drip rail between the rail and door frame to help prevent water and cleaners from loosening the tape over time.
13 Attach the interior door handle [R] and exterior door handle [S] to the door panel with the two #6-32 x 1 1/4” round head screws [T].

Close the door and check the clearance with the strike jamb. Loosen and adjust if necessary.

14 Inspect the strips of black glazing vinyl and note the two different profiles. The flat shaped vinyl [P] is installed vertically and the crescent shaped vinyl [Q] is installed horizontally. There should be a total of eight (8) individual vertical and eight (8) individual horizontal pieces of vinyl about a 1/2” wide each. (May need to peel apart from a wider strip).

These vinyls are designed to fit tightly between the glass and metal frame. **TIP:** Wet the glass and vinyl with water or glass cleaner immediately before installing vinyl and use a small block of wood to press the vinyl into place.

**NOTE:** Different glass sizes require different vinyl. Refer to the chart for clarification if installation is extremely difficult.

15 Cut the four (4) pieces of vertical vinyl [U] 1” longer than the vertical opening. Verify depth of glass into post and wall jamb is sufficient and even (refer to Step #5). Starting on the exterior, slide one end of the vertical vinyl up into the header and press into the wall jamb about 6” down.

Apply light pressure against the interior of the glass panel to hold vinyl in place and install vinyl on the interior in a similar fashion. Press the vinyl into the wall jamb alternating between the interior and exterior. Remove the tape from glass surface before installing the vinyl.

**Caution:** Do not to stretch the vinyl when pressing into place.

Repeat above steps for the corner post.
16 Cut four (4) pieces of the horizontal vinyl [V] 1/2” longer than the horizontal opening. Cut both ends of the vinyl with a back mitre so that they sit tight against the face of the vertical vinyl. (see illustration)

Starting at the top on the exterior, place the vinyl against the glass (open side against glass) and press into the header at both corners. Continue pressing vinyl into the header from both ends working toward the middle.

Install the top interior vinyl on the same side.

Repeat above steps for the bottom of the panel as well as both top and bottom of the other panel.

17 Carefully silicone the seam between the walls and the wall jambs as well as the curb and threshold on the inside of the shower.

NOTE: Silicone on the exterior seam is optional.

DO NOT USE the shower until the silicone is completely cured. Check the tube of silicone for the manufacturer recommended cure time. (typically 24 - 48 hours)

NOTE: Do not silicone over the weep holes
