Appendix H—Hinge Shimming
QCI5281

Process for Shimming Hinges (to prevent revisits due to slippage)

On a door with top and bottom pivot hinges:

1) Adjust the door so that the gap on both sides of the door is set at 3/16” and the correct bottom gap.
   - 3/8” doors need 7/16” gap
   - 1/2” doors need 9/16” gap

2) Remove one back plate at a time and fill gap between the hinge and the glass with shims supplied in parts pack. Make sure to shim both

On a door with wall mount or glass to glass hinges:

1) Adjust the door so that the gap on both sides of the door is set at 3/16” and the bottom gap is 7/16”

2) Remove one back plate at a time and fill gaps surrounding hinge with shims supplied in parts pack. Make sure to shim both hinges and use combination of shim thicknesses to fill entire gap.
