

PURE CLEAR GLASS

The Clear Choice

Standard vs. Low Iron Glass

The CLEAR CHOICE

After creating the shower of your dreams, enhance its appearance with the beauty and clarity of low iron Pure Clear glass - a difference you can see.

Standard Clear Glass

Due to the natural presence of iron oxide, standard clear glass has a slight green tint, that is often most noticeable on the edge. As glass thicknesses increase, this effect becomes even more obvious in the entire piece.

Pure Clear - Low Iron

Low iron glass, on the other hand, is created by reducing the amount of iron in the molten glass formula, producing a crystal clear glass, providing ultimate color fidelity. Both light and clarity are increased in your shower space, even as glass thicknesses increase. Even the edge work on low iron glass has a luxurious and sophisticated appearance.

The Details

Basco's low iron options - Pure Clear, Pure Silk, and Pure Clear ShowerGuard are all available in both 3/8" and 1/2" glass thicknesses, and most of our RODA collections.

The clarity and beauty of PURE CLEAR glass is
the CLEAR CHOICE.
