

How Plants Travel

Plants seeds can travel in many different ways: by humans, animals, or the wind. Read each sentence in the box. Then write the number of each sentence in the orange circle to match one of the pictures below.

1. Farmers grow crops by planting seeds in the ground.
2. Birds eat fruit in one place and pop out seeds in another place.
3. Coconuts fall into the sea and are carried to another shore.
4. Dandelion seeds are carried by the wind.
