

SPRING SCIENCE

Make a Worm Tower

A worm tower will allow you to learn more about the soil and earth science in general! After you have built your worm tower you can remove the black piece of paper and view the worms that are around the outside of the bottle. A fun spring science experiment to get you outdoors!

Supplies:

- A 2 liter soda bottle
- Dark paper
- Worms
- Dirt

Steps:

- Cut the top off the soda bottle and set it aside.
- Add gravel first, then soil, and then some worms once you have filled the bottle about half way
- Once it is filled put the top on but upside down like a funnel so that you can add water a little water.
- Cover the bottle with dark paper so the worms can tunnel through. And there you have it!
