Do you know how much energy you use in your home? How much does your energy use cost you annually? The average New York State household spends $1,150 annually on electricity to power their home. How does your home compare? Is the amount of energy you use in your home a lot or a little? If it is a lot, what changes can you make to reduce the amount of energy you use? Understanding our home energy use can be hard and it can be even harder to determine how your energy use compares to your neighbor down the street or the house across town. In the effort to help you answer some of these questions Cornell Cooperative Extension of Jefferson County is launching a new Facebook live webinar series called “Pathways to Energy Efficiency” in collaboration with Cornell Cooperative Extension of St. Lawrence County and the Adirondack North Country Association.

The Pathways to Energy Efficiency webinar series is designed to help you understand what energy efficiency is, how it can benefit you and your family and help you make the changes in your home to get you to your energy goal. Each webinar in the series will feature a new topic of conversation centered on energy use and your home. Throughout this series we hearing from energy professionals as they educate us on the ins and outs of home energy audits, solar installations, renewable heat and much more. We will also be hearing from local home owners and renters like you to learn about how they reduced their energy burden and the positive effect it had on homes. Join us live every Tuesday starting August 4th from 12:15 PM to 12:30 PM on Cornell Cooperative Extensions Facebook Page or catch up with us later by watching the recorded video when you have time! For more information or questions regarding this webinar series contact our Community Energy Educator, Kathryn Ripstein at ker99@cornell.edu or 315-788-8450 ext. 232.
