Hallett Nature Sanctuary
Discovery Journal

Name

Date of Visit
As you explore the Hallett Nature Sanctuary, pay close attention to what makes each woodland layer different. What do you notice in each?

In the ground layer, I notice...

In the understory layer, I notice...

In the canopy layer, I notice...

Add one more guideline for Park Explorers to follow, so they can be stewards, too!
Planning a Wild Garden

Although the Hallett Nature Sanctuary looks natural, it is a carefully planned "wild" garden! **Designers** built the Hallett Nature Sanctuary so that visitors can experience the unique sights and sounds of the forest without leaving the city.

**Discover!**

Create a sound map of the Hallett Nature Sanctuary! Sit or stand in one spot, and carefully listen to the sounds around you. On the map below, draw or describe five sounds you hear and where they are coming from.

Being in an urban woodland makes me feel...
Who Keeps the Hallett Nature Sanctuary Healthy?

Woodland gardeners keep the Hallett Nature Sanctuary healthy for the plants and animals that live there. Here are just some of the things a woodland gardener may do during the day:

- Add plants to help keep the soil in place.
- Remove litter to keep the woodlands beautiful.
- Remove weeds so that other plants have enough room to grow.
- Prune, or cut back branches, to keep trees healthy.
- Leave logs on the ground to create habitat, or home, for wildlife.
- Teach visitors about the Hallett Nature Sanctuary and its history.

Different trees have different needs, so gardeners pay careful attention to which kind of tree they are caring for. They are able to identify trees by closely observing and comparing their different parts: the trunk, the bark, the branches, the leaves, the flowers, and the seeds.

Discover!

The Hallett Nature Sanctuary is one of the only places in Central Park where you can see trees in all stages of life — from tiny seeds to dead logs. Can you find them all?

Create a Tree Profile for one Hallett Nature Sanctuary tree.
Not Just for People!

Urban naturalists study the plants and animals living in cities. The Hallett Nature Sanctuary is a habitat for many animals that live in New York City for some or all of the year, providing them with food, shelter, space, and water. Naturalists teach others about the importance of places like the Hallett Nature Sanctuary by recording and sharing what they observe.

Discover!

Investigate a fallen log for signs of insect, mammal, and bird life. Record your observations below and remember to replace any leaf litter and logs after you’re done!

GROUND LAYER STUDY

On the log, I notice...

Under the log, I notice...

Under the leaf litter, I notice...

Animals may leave behind cracked-open seeds, chewed leaves, droppings, feathers or fur, holes in wood, eggs, claw marks on trees, sawdust, or even footprints!

Central Park is MY Park!

You are one of millions of people who visit Central Park every year! With so many visitors, it takes a lot of hard work to keep Central Park’s landscapes healthy and beautiful. The Central Park Conservancy is the official steward, or caretaker, of Central Park. By following the Park Explorer’s Code of Conduct, you are a Central Park steward, too! Sharing why Central Park is important to you and teaching others about your discoveries is another way to be a steward.

This is...

I’m sharing this because...

Being an urban park steward is important because...

Healthy Cities Need Healthy Parks!

The Hallett Nature Sanctuary is one of many special places in Central Park where people can enjoy and explore the outdoors. Since urban parks provide so many benefits to people, people need to be stewards of urban parks – including Central Park!
Discover Central Park!

The Central Park Conservancy offers a variety of Discovery Programs to help children explore Central Park and develop skills for inquiry, all in the world’s greatest outdoor classroom.
