Exploring World Cup Data in Python

2022-11-15
About this case study

**Data:** Over 40,000 results of international football matches from 1872 up to 2022, detailing the teams, their scores, and where the match was held.

**Primary Goal:** Learning exploratory data analysis techniques, including data preparation and manipulation.

**Secondary Goal:** Get you all fired up for the FIFA world cup starting soon!

**Why?** You will typically need a variety of data munging skills to answer interesting questions.
How to access today’s database and notebook

- The challenge and solution workspaces can be accessed via the links sent in the chat and here:
