4 Software installation

Step 01: Power on the system.

Step 02: Insert Utility CD into CD-ROM

Step 03: Open your Internet browser and key in the address **http://192.168.0.1**. You will see the below picture. **(Notice: Set the IP of client system as the same domain)**

Step 04: Press button "Browse" and search "PKG" file in the CD. (Default path is "x:\Firmware") then push the "Setup" button.

Step 05: Before you push the "OK Button" for next step.

Step 06: **Please do not power off either your computer or the NAS during this process. This could take a few minutes depending on your hard drive capacity.**

Step 07: When the system upgrade process is completed, you will see the message below in your web browser.

Step 08: Please choose the suitable profile. (Default is Conference Profile)

Step 09: Please install the client engine software from the CD. (Path is x:\application)

Step 10: Click “Administration Console” to operate

Step 11: Click the “Server Web Management” and key in the default username and password”, then you can access the system setup.

(Notice: The System Default Username and Password is “admin”)

The enclosed Hardware Installation Guide gives you a step-by-step explanation of how to install your Network Attached System (NAS). Further technical assistance and all updated drivers can be accessed at

www.intellinet-network.com

Here you have access to 24hour support and can contact our support team to answer any questions you may have.

In order to provide the requested support we need the following details from you:

- A clear description of the problem;
- Version number of the drivers you are using (always check the website to see whether you are using the latest version);
- Type of PC you are using;
- Operating system you are using
