(Visit link for full instructions or to install on your website)

Here's how to install the Google Roboto Font on all platforms.

Download Google Roboto

Whatever platform you're on, you first need to download the Roboto font pack.

Go to the [Roboto font site](#) and download the font (zipped file). You need to click "Select this Font," and then at the bottom of the screen click the dark tab that says "1 Family Selected."

≡ Google Fonts

Roboto

In the newly opened tab, click the “Download” icon to download the Roboto font as a zip file.

Extract the zipped file to a folder of your choice. Open the folder, and you should see all the Roboto fonts inside.

Install Roboto Font on Windows 10

Open the Roboto font folder. Select all the fonts. Right-click your mouse, and select “Install.”

This will install the fonts to your Windows machine. You can now use the Roboto font in your applications.

Install Roboto Font on Linux

Open your home folder and enable the option to view hidden files/folders. Locate the “.fonts” folder. If it doesn’t exist, create it. Next, move the Roboto font folder to this “.fonts” folder.

Restart your LibreOffice, GIMP, Photoshop or whatever apps you are using. You should see the Roboto font available for selection.

Install Roboto Font on Mac

Similar to Windows. Extract the fonts, double-click to install them, and they’ll appear in your Font Book. Alternatively, you can drag-and-drop all of them to your Font Book.
