

Amherst

Modern meets retro in a mix of raised horizontal and vertical lines with wood grain or color blocks. It's hip and unique. Mondrian would be proud.

30 Mustard

40 Retro

50 Tan

FEATURES

- Dual visual and tactile text
- Clear through to wall color
- Integral tactile text and Braille
- Second surface color or graphic
- Thermoformed acrylic

ABOUT THE DESIGNER:

Brenda Voglewede

The process of accessorizing an architectural space with a beautiful sign system is exciting, even now after 20 years. Sometimes flashy and whimsical, often times subtle and elegant, signage design has to ultimately function: identifying, directing and aiding the flow of a visitor's use of the space. My aspiration is to make that user's signage experience feel effortless.

CONSTRUCTION

The Amherst sign family includes clear, non-glare acrylic plaques with tactile, non-tactile and removable insert graphics. Amherst plaques may incorporate a dual visual/tactile graphic system, digitally printed background patterns and second surface, spray applied background colors. Plaque assemblies are mounted flush to architectural surfaces with high-strength double sided foam tape, or flag mounted with aluminum brackets. Non-tactile graphics are reproduced with direct to substrate digital printing, and standard tactile graphics and Braille for the Amherst family are thermo-formed.

TO ORDER

Visit www.seesawsigntools.com to use the Amherst sign family on your next project:
