

How to buy and install the MultiTrack Player and songs – a very detailed guide with pictures FOR PC USERS

Please don't be daunted by the length of these instructions, we've made them very detailed for people that are not used to downloading software. Most of the steps are very intuitive.

PC Guide

1. The player requires Apple QuickTime to be installed on your computer.

To do so, go to this page: <http://www.apple.com/quicktime/download/>

(It's a free download). Restart your computer after you have loaded Quicktime (see screen below)

Download QuickTime 7

The screenshot shows the Apple website's download page for QuickTime 7. It features two radio button options: "QuickTime 7.7 for Windows XP, Windows Vista or Windows 7" and "QuickTime 7.7 with iTunes for Windows XP, Windows Vista or Windows 7". Below these options is a checkbox for "Keep me up to date with Apple news, software updates, and the latest information on products and services." There is also a link to "Apple Customer Privacy Policy". Below that are input fields for "Email Address" and "Location", with "United Kingdom" selected. At the bottom is a blue "Download Now" button with a download icon.

2. Go to <http://www.worshipbackingband.com/the-player.html>
3. Click "Add to Cart"
4. Now go to <http://www.worshipbackingband.com/multi-track.html/>
5. Select some songs and add them to the cart. Look at the bulk buy discounts box on the right of this page – buy 10, 25 or 40 tracks and get extras free of charge. Make sure you add the extras to your cart as well so if you are buying 10 songs, put 12 in the cart.
6. Go through the checkout process creating an account as you go. In step 3 click "Place Order".
7. You will now receive an email receipt which includes some download links (see the blue links below). If the email doesn't get through (some Internet Service Providers block our autogenerated emailed) just go to My Account on the Worship Backing Band website and click My Downloadable Products to access the links.

Worship Backing Band: New Order # 20000241

Order #	Date	Ship To
200000241	8/31/11	
200000003	8/11/11	
100000000	7/20/11	

9. Click My Downloadable Products then select the blue PC or Mac version of the Player (at this point don't download your songs)

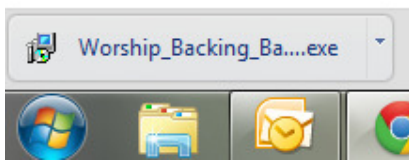

My Downloadable Products

Items 1 to 10 of 19 total Show per page

Page: 1 2 ▶

Order #	Date	Title	Status	Remaining Downloads
200000241	8/31/11	A New Hallelujah - Windows version	Available	Unlimited
200000241	8/31/11	A New Hallelujah - Mac version	Available	Unlimited
200000241	8/31/11	The MultiTrack Player - PC version	Available	1
200000241	8/31/11	The MultiTrack Player - Mac version	Available	1

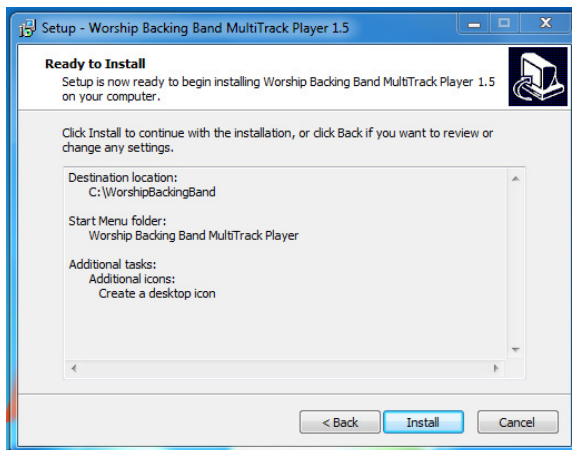

- The player will begin to download and you will probably see this appear in the bottom left of your screen as a .exe file which you click on

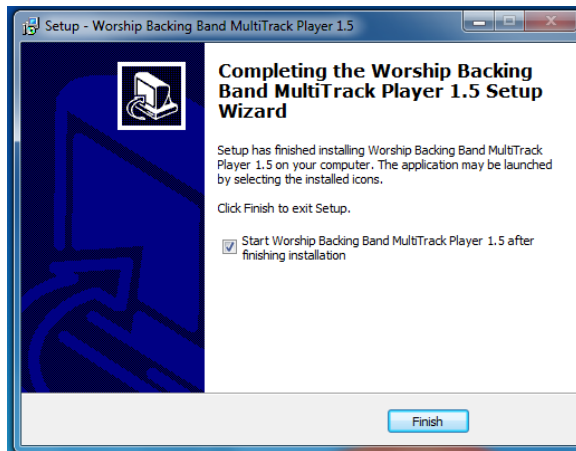

- On the following screens click:

Run
Yes
Next
Next
Next
Next

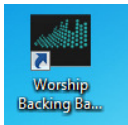

- Now tick to install a desktop icon
Click Next then finally Install

Finally, the installer gives you the option of starting the player immediately:

If you choose not to start the player immediately (or when you want to run the player at any time), this icon should then appear on your desktop (assuming you clicked YES in step 12)

13. If it isn't open already, double-click the icon to open the player.

Note that you can also find the program by searching for "Worship" in your programs.

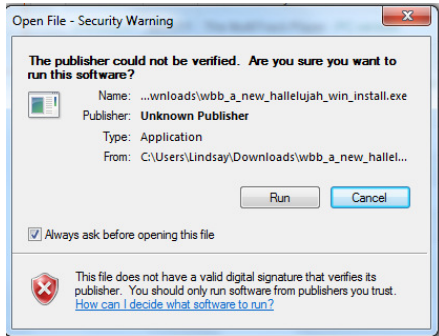

14. At this point the player and library will be empty (see below)

If it isn't empty then you may have opened the demo version in error.

Now to download the songs

1. Now go back to your email invoice (or my account) and click to download your songs. Again you will see the downloads in the bottom left hand corner. Click to begin the download
2. Click Run

3. Then click:

Next

Next

Next

Install (this will take longer than the Player to install as the song tracks are bigger)

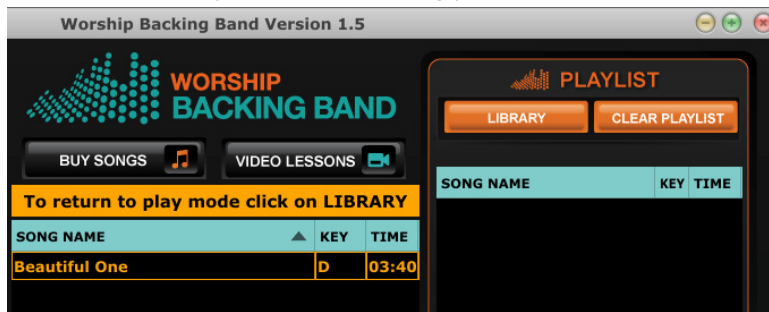

Now click Finish

4. Go back to your player (it should be open in your browser window). Refresh the window by clicking the little refresh symbol on the top left of your browser.

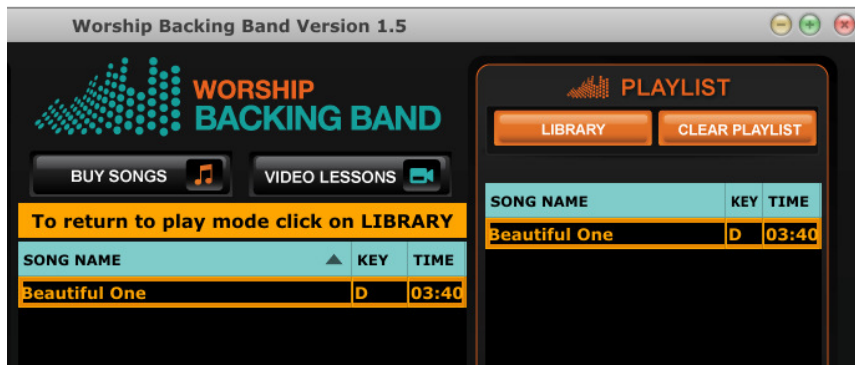

Or alternatively close the window and open the player again (remember that once you have the songs in your library you won't need to be online when you use the player)

5. Click LIBRARY and you will see the song you have downloaded

6. Now click on the song title in the middle and drag it to the playlist on the right.

7. Click LIBRARY again in order to return to play mode.
8. The song will take a little while to load in the player.

Now you are ready to either load more songs or start experimenting with the one you have loaded.

9. Click PLAY to begin playing.
10. Look at the panel on the left. This shows the individual instrument tracks. Here is some more info about the stems <http://www.worshipbackingband.com/uk/multitrack-stems>

You can mute any of the stems by clicking MUTE or solo any of the by clicking SOLO (great for learning individual parts).

There is a separate controller for the Left and Right channels (one being for your band, and the other for the congregation). You'll want to take the volume of the congregation mix right down for elements such as the CLICK and the VOX CUE.

Adjust the volume of each stem by moving the sliders.

Click SAVE SONG MIX to save your final mix.

Click RESET SONG MIX to go back to the default settings.

Please note that your license only allows you to download the player and songs on a single PC. Please contact us for multi user / multi pc licenses.

We would encourage you to create a backup copy of the player and songs (for instance on a memory stick) in case you lose them on your hard drive. The player and songs normally allow just one or two download attempts and will not be permanently available in your account after the initial download.

Hot Key Shortcuts

Once you have the player installed you will find the following hot keys helpful:

- esc => stop
- space => play
- left arrow => back (prev)
- right arrow => forward (next)
- 'm' => mute
- 'p' => pause

The < and > keys allow the user to select another song section and the G key jumps to that section and starts playing the song from there. This works in the same way whether the song is currently playing or not (i.e. if the song has not started, the G key will start from the selected section).
