ADJUSTABLE TORQUE WRENCH

Fully adjustable precision torque wrench designed with 9 distinct torque settings
A simple twist of the handle locks in precision-engineered torque values guaranteeing accuracy and repeat-ability.

Adjustable Torque Wrench Features

• Minimizes the risk of the implant screw working loose
• Improves precision during bridge fabrication
• Autoclavable
• No lubrication needed
• Ratchet mechanism
• 9 Torque settings (15, 20, 25, 30, 35, 40, 45, 50 and 60 Ncm)
• Torque settings lock into select location for accuracy and repeat-ability
• Ratchet clutch disengages (slips) when torque is applied to avoid over torquing
• Torque settings are provided for use with all implant designs
• Wrench head accepts the standard 4mm square connection
