

A few details on how we're making our operation **GREENER**

Perhaps no industry has a greater opportunity for reducing the impact its production has on the environment than printing.

Semper Fi Printing & Promotion's commitment to become better stewards has resulted in a companywide program that recycles 100% of its scrap waste – including paper, printing plates, plastic substrates, shrink wrap, corrugated stock and secondary packaging.

Our green initiative also dictates we use 100% vegetable-based inks, and VOC-free UV coating. We encourage our customers to specify recycled stock which currently represents upwards of 30% of our total printed volume.

We are committed to reducing our ecoimpact by using 100% renewable resource electricity through the purchase of carbon offsets. We acknowledge and thank our customers and vendors for their continued support of these business practices.
