Sedgwick County Health Department
Infection Control Plan

The following guidance is for your organization to create an infection control plan. The purpose of this plan is to reduce exposure to COVID-19 and other illness among your staff and customers.

**Recommendations for an Infectious Disease Outbreak Response Plan:**

- Create a team of diverse individuals to create this plan and review it regularly
- Identify possible work-related exposure and health risks to your employees. OSHA has more information on how to [protect workers from potential exposures](#) to COVID-19.
- Review human resources policies to make sure that policies and practices are consistent with public health recommendations and are consistent with existing state and federal workplace laws
- Explore whether you can establish policies and practices, such as flexible worksites (e.g., telecommuting) and flexible work hours (e.g., staggered shifts), to increase the physical distance among employees and between employees and others if state and local health authorities recommend the use of social distancing strategies. For employees who are able to telework, supervisors should encourage employees to telework instead of coming into the workplace until symptoms are completely resolved. Ensure that you have the information technology and infrastructure needed to support multiple employees who may be able to work from home.
- Identify essential business functions, essential jobs or roles, and critical elements within your supply chains (e.g., raw materials, suppliers, subcontractor services/products, and logistics) required to maintain business operations. Plan for how your business will operate if there is increasing absenteeism or these supply chains are interrupted.
- Set up authorities, triggers, and procedures for activating and terminating the company’s infectious disease outbreak response plan, altering business operations (e.g., possibly changing or closing operations in affected areas), and transferring business knowledge to key employees. Work closely with your local health officials to identify these triggers.
- Plan to minimize exposure between employees and also between employees and the public
- Establish a process to communicate information to employees and business partners on your infectious disease outbreak response plans and latest COVID-19 information.
- Anticipate employee fear, anxiety, rumors, and misinformation, and plan communications accordingly.
- Determine how you will operate if absenteeism spikes from increases in sick employees, those who stay home to care for sick family members, and those who must stay home to watch their children if dismissed from school. Businesses and other employers should prepare to institute flexible workplace and leave policies for these employees.
- Local conditions will influence the decisions that Sedgwick County makes regarding community-level strategies; employers should take the time now to learn about plans in place in each community where they have a business.
- Consider cancelling large work-related meetings or events.
- Engage with [Sedgwick County Health Department](#) to confirm channels of communication and methods for dissemination of local outbreak information.
Important Considerations for Creating an Infectious Disease Outbreak Response Plan

- All employers should be ready to implement strategies to protect their workforce from COVID-19 while ensuring continuity of operations. During a COVID-19 outbreak, all sick employees should stay home and away from the workplace, respiratory etiquette and hand hygiene should be encouraged, and routine cleaning of commonly touched surfaces should be performed regularly.

- Employers should
  - Ensure the plan is flexible and involve your employees in developing and reviewing your plan.
  - Conduct a focused discussion or exercise using your plan, to find out ahead of time whether the plan has gaps or problems that need to be corrected.
  - Share your plan with employees and explain what human resources policies, workplace and leave flexibilities, and pay and benefits will be available to them.
  - Share best practices with other businesses in your communities (especially those in your supply chain), chambers of commerce, and associations to improve community response efforts.

- Impact of disease on employees that are vulnerable and may be at higher risk for COVID-19 adverse health complications. Inform employees that some people may be at higher risk for severe illness, such as older adults and those with chronic medical conditions.

- Prepare for possible increased numbers of employee absences due to illness in employees and their family members, dismissals of early childhood programs and K-12 schools due to high levels of absenteeism or illness:
  - Employers should plan to monitor and respond to absenteeism at the workplace. Implement plans to continue your essential business functions in case you experience higher than usual absenteeism.
  - Cross-train personnel to perform essential functions so that the workplace is able to operate even if key staff members are absent.
  - Assess your essential functions and the reliance that others and the community have on your services or products. Be prepared to change your business practices if needed to maintain critical operations (e.g., identify alternative suppliers, prioritize customers, or temporarily suspend some of your operations if needed).

- Employers with more than one business location are encouraged to provide local managers with the authority to take appropriate actions outlined in their business infectious disease outbreak response plan based on the condition in each area.
