

ayon

Ayon - Orion II

The Orion II represents a dramatic rethinking of vacuum tube based integrated amplifier industrial design while retaining the basic architecture as our highly regarded "Spirit" amplifier. The Orion II integrated amplifier combines neutrality, realistic dynamics and power projection, true musicality with high resolution. Perfect finish, elegant discrete design and outstanding sonic performance make the "Orion II" unique, setting a new price-to-value standard in its class. The Orths II monoblocks provide true balanced or single-ended operation combined with the ability to deliver more than 200 watts per channel. Its powerful and fast bass, expressive and natural midrange, extended high frequencies and dynamic output power result in outstanding life-like performance free of compression effects or dynamic limitations.
