Oncotelic Therapeutics Inc. (OTCQB: OTLC) Advancing Proprietary Solutions Focused on Nanotechnology-Enabled Drug Delivery, AI-Enhanced Biomedical Infrastructure

NEW YORK, June 02, 2026 (GLOBE NEWSWIRE) -- via BioMedWire - Oncotelic Therapeutics Inc. (OTCQB: OTLC) today announces its placement in an editorial published by BioMedWire (BMW), one of 75+ brands within the Dynamic Brand Portfolio@IBN (InvestorBrandNetwork), a specialized communications platform with a focus on financial news and content distribution for private and public companies and the investment community.

To view the full publication, "How Advanced Drug Delivery Could Improve Existing Cancer Treatments," please visit: https://ibn.fm/c83ln

As oncology drug-development costs continue climbing and regulatory pathways become increasingly complex, biotechnology companies are placing renewed emphasis on improving existing therapeutics through advanced delivery technologies rather than relying exclusively on discovering entirely new drugs. Across the healthcare sector, growing attention is being directed toward nanoparticle delivery systems, intravenous reformulations and precision pharmacokinetic strategies designed to potentially improve bioavailability, systemic exposure, tolerability and dosing consistency of established cancer therapies.

Within this broader movement, Oncotelic Therapeutics Inc. is advancing its Sapu003 program and Deciparticle(TM) platform as part of a larger industry trend focused on scalable nanotechnology-enabled drug delivery and AI-enhanced biomedical infrastructure. The company's strategy centers on leveraging platform technologies that may support multiple therapeutic applications across oncology and rare disease markets rather than relying solely on a single drug candidate.

About Oncotelic Therapeutics Inc.

Oncotelic Therapeutics is a clinical-stage biopharmaceutical company focused on the development of oncology and immunotherapy products. The company's mission is to address high-unmet-need cancers and rare pediatric indications with innovative, late-stage therapeutic candidates. In addition to its directly owned and developed drug pipeline, Oncotelic benefits from the robust portfolio of inventions created by its CEO, Dr. Vuong Trieu, who has filed more than 150 patent applications and holds 39 issued U.S. patents. Beyond its internal programs, the company also licenses and codevelops select drug candidates through joint ventures. Currently, Oncotelic owns 45% of GMP Bio, a joint venture under Trieu's leadership and guidance, which is advancing its own pipeline of drug candidates that further complement and strengthen Oncotelic's strategic position in oncology and rare disease therapeutics.
