AudioEye Launches Agentic Audits and SDK MCP, Enhancing the Industry's Strongest Compliance Protection

AudioEye Intelligence provides the highest rates of accessibility issue detection

TUCSON, Ariz., Oct. 8, 2026 /PRNewswire/ -- AudioEye, Inc. (Nasdaq: AEYE) **("AudioEye" or the "Company")**, an industry-leading digital accessibility company, today announced two new AI products, Agentic Audits and the SDK MCP. Both are powered by AudioEye Intelligence, the Company's proprietary accessibility dataset built from over one million human reviews across more than 100,000 sites. Together, these products deliver compliance and lower legal risk at the speed businesses now build with AI.

Agentic Audits: find more high-risk issues, on demand

Every site update can introduce new legal risk, and many high-risk issues only surface when someone actually uses the page. Agentic Audits deploy an AI agent, powered by AudioEye Intelligence, that opens menus, types into fields, and navigates checkout the way a person would, identifying accessibility issues that result in legal issues.

- **Deeper detection:** Agentic Audits find up to 50% more high-severity issues than automation alone.
- **Fast Results:** Most findings come back within one hour with fix recommendations from AudioEye Intelligence.

Agentic Audits help companies catch high-risk accessibility issues as their sites change, without waiting for their next expert audit, keeping more pages compliant and protected.

AudioEye SDK MCP: accessible code at the speed of AI, with AudioEye Intelligence

The AudioEye SDK MCP brings AudioEye Intelligence directly into the AI coding tools developers already use. Rather than relying on what general AI tools learned from an inaccessible web, the agent applies fixes proven through a dataset including over a million human reviews.

- **Industry-leading detection:** Find up to 2.5x more issues than other accessibility tools do before code ships, according to an independent 2026 study.
- **Verified fixes:** Each fix can be rescanned to confirm it worked, so developers can approve changes rapidly instead of spending hours researching fixes.

The SDK MCP helps developer teams ship compliant code from the start and reduce risk with every release.

Accessibility at the Speed of AI

"Companies are increasingly using AI tools, but these tools have been shown to increase legal risks for digital accessibility," said Kelly Georgevich, CEO of AudioEye. "Our customers will now benefit from our proprietary dataset, AudioEye Intelligence, with the speed and accuracy of Agentic Audits and enhanced developer tools."

With today's launches, AudioEye gives businesses more ways to deliver accessibility at scale, for every visitor, human or AI agent.

Agentic Audits and the AudioEye SDK MCP are available today.

About AudioEye

AudioEye exists to ensure the digital future we build is accessible for people with disabilities and AI agents. AudioEye's comprehensive solution for over 129,000 customers combines industry-leading AI automation technology with expert

fixes informed by the disability community. This powerful combination delivers industry-leading protection against lawsuits and readiness for AI agents. With 25 US patents, AudioEye's solution includes 24/7 accessibility monitoring, automated WCAG issue testing and fixes, expert testing, developer tools, and legal protection, empowering organizations to confidently create accessible digital experiences for all.
