Digital Enterprise Transformation (DET) Solutions

EY’s DET solutions help move firms toward compliant, secure and digitally-enabled operating models that change how customers, employees, partners and other stakeholders experience businesses. This transition is facilitated by EY’s deep industry knowledge and expertise in the latest digital transformative capabilities:

- **Advanced Analytics**: autonomous or semiautonomous examination of data or content to discover deeper insights, make predictions, or generate recommendations that result in lower costs, reduction in risks, improved customer engagement and higher revenues.
- **Blockchain**: having received an enormous amount of coverage in recent times, Blockchain technology is being tested by firms across multiple industries for applications such as payments, securities clearing, KYC and reconciliations. While strong business cases have been challenging to identify, public blockchains and cryptocurrencies have gained legitimacy as new financial products.
- **Digital**: enable transformation, reimagine the end-to-end end customer experience and engagement model, create innovation culture, bring agility and metrics to product design, and support a technology transformation, to stay ahead of changing customer needs and disruptive market forces.
- **Cloud**: re-think business strategy and operating models, and modernize legacy systems, processes and operations through cloud-enabled platforms.
- **Cybersecurity**: build holistic enterprise security programs to support cybersecurity operations and mitigate cyber risk, with services such as Threat Management, Data Protection and Privacy, Identity and Access Management etc.
- **Robotics and Intelligent Automation**: implement a holistic view of automation, process and service improvement by re-imagining how front, middle and back office processes can be automated, to achieve speed and efficiency, and reduce errors and risk.
- **Next Gen Data**: enable firms to collect, analyze, store, distribute and visualize enormous amounts of data in various traditional and non-traditional formats.

Your responsibilities will primary align to one of the above areas where you have depth and experience. Ideally, you also have experience and technical expertise to some degree in one or more of the other capabilities. One of our strengths that has been recognized in the industry is our ability to provide collaborative teams, so we look for candidates with a strong understanding of the overall value of the DET solution capabilities.

What working at EY offers:

About EY:
At EY, our purpose is Building a better working world. The insights and quality services we provide help build trust and confidence in the capital markets and in economies the world over. We develop outstanding leaders who team to deliver on our promises to all of our stakeholders. In so doing, we play a critical role in building a better working world for our people, for our clients and for our communities.

Through our four integrated service lines — Assurance, Advisory, Tax and Transaction Advisory Services — and our deep sector knowledge, we help our clients to capitalize on new opportunities and assess and manage risk to deliver responsible growth. Our high-performing, multidisciplinary teams help them fulfill regulatory requirements, keep investors informed and meet stakeholder needs.
