Platform Engineer

About the job:

One of the Boston area's fastest growing technology companies, Jobcase is the only social media site dedicated to empowering the world’s workforce. Jobcase is a social media platform that connects our 90 million+ members to each other and potential employers.

We are looking for a software engineer responsible for designing and building the data infrastructure at Jobcase. You’ll be solving problems associated with all of our core capabilities such as our high-performance job search engine, scalable content recommendation service, machine learning platform, integrated consumer communications system, and others. As a member of our growing team, you will be responsible for all aspects of the development lifecycle and work with other engineers throughout our rigorous, highly-collaborative process.

What you’ll be doing here:

- Writing tested, idiomatic, and documented Java
- Solving interesting problems of scale
- Designing systems to handle the evolving needs of the business
- Reviewing code
- Constantly learning new things

About you and your skills:

- Proficiency with enterprise Java
- BS degree in Computer Science or related field
- Highly developed written communication skills and attention to detail
- Familiarity with relational database technologies such as MySQL
- Familiarity with full-text search technologies such as ElasticSearch
- Familiarity with distributed computing technologies such as Apache Ignite
- Familiarity with single page application frameworks such as AngularJS
- Experience working in a multi-threaded environment

About Jobcase:

- Affiliated partner of MIT's Computer Science and Artificial Intelligence Laboratory, CSAIL
- We cover 100% of both medical and dental
- We pay for employee parking/MBTA costs
- Unlimited PTO
- Fully stocked kitchen & we host lots of fun all-company events
- Boston Business Journal best place to work 2015, 2016, 2017, 2018
