Appendix B – Environmentally Sensitive Areas.....	49
Appendix C – Sanitary Sewer Overflow Work Orders Areas.....	96

1. Introduction

This third Revised Phase II Plan is submitted pursuant to Paragraph 9.c of the Modified Consent Decree (Civil Action No. JFM-02-1524). In accordance with the Modified Consent Decree (MCD), the report includes:

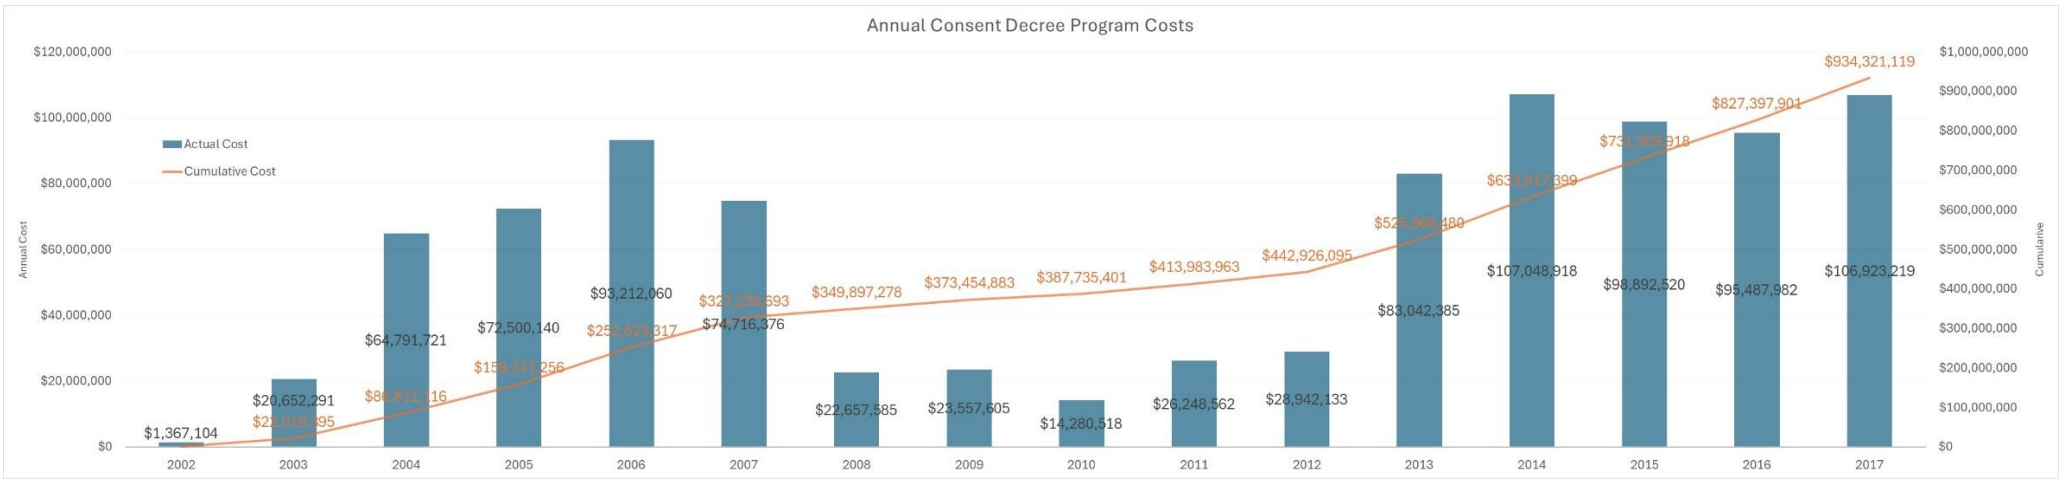

- Evaluation of the expected effectiveness of proposed projects pursuant to sub-paragraph 8.b of the MCD
- Evaluation of the observed effectiveness of the rehabilitation projects completed pursuant to the Phase I Plan as determined by the post-construction flow monitoring and conducted following completion of the Phase I projects
- Identifications of remaining deficiencies which have not been addressed by the Phase I projects
- Identification of all rehabilitation and other corrective actions proposed to be taken to address any remaining deficiencies and to meet the 5-year Level of Protection (LOP) with additional measures necessary to achieve a 10-year LOP for overflows located in sensitive areas
- A plan and schedule for implementing rehabilitation and other corrective actions which includes:
 - a description of the proposed rehabilitation and other corrective actions to be implemented, including the location of the proposed actions;
 - the decision making-criteria used to select the rehabilitation and correction actions;
 - the prioritization scheme developed and applied to the rehabilitation and corrective actions to be implemented, with priority applied to rehabilitation and/or corrective measures that:
 - i. address any remaining Collection System deficiencies that contribute to Building Backups;
 - ii. achieve the greatest reduction in remaining SSO volumes; and
 - iii. address any remaining deficiencies in any areas where chronic SSOs continue to occur;
 - an estimate of the cost necessary to complete any proposed rehabilitation and other corrective actions;
 - a description of additional data collection that will be implemented after the completion of the Phase II rehabilitation and other corrective actions to assess the efficacy of these actions;
 - a sewershed map identifying the location of any expected remaining overflows after the implementation of the Phase I and Phase II Plans, and a table listing the expected volume of overflow at those locations, as predicted by the continuous simulation hydraulic modeling for peak flows for the five year and ten year recurring periods; and
 - a revised list of the Sensitive Areas, including addresses and the reason why each particular location is a Sensitive Area, together with a map indicating the location of the Sensitive Areas.

On May 31, 2023, the City of Baltimore Department of Public Works (DPW) submitted the Phase II Plan to the U.S. Environmental Protection Agency (EPA) and Maryland Department of Environment (MDE). On February 27, 2024, EPA and MDE notified DPW that they considered the Plan to be insufficient to accomplish its purpose under the MCD. On October 25, 2024 DPW submitted the revised Phase II Plan, and on December 19, 2024 EPA and MDE provided review comments. On February 27, 2025 DPW submitted a second revised Plan, and on June 25, 2025

EPA and MDE notified DPW that they considered the Plan to be insufficient to meet the LOP requirements of the MCD. This revised Plan addresses EPA and MDE's concerns, complies with the MCD requirements, and replaces all previous versions of the Phase II Plan.

2. Effectiveness of Consent Decree and Modified Consent Decree Programs

In 2002, the City of Baltimore (City) entered into a Consent Decree (CD) with EPA, MDE, and the U.S. Department of Justice to address sanitary sewer overflows (SSOs). In 2017, the City entered into the MCD with the same parties to further invest and improve the City's wastewater collection system. As summarized in the graph below, the City has spent approximately \$930 million for the Consent Decree program and a projected cost of \$1.15 billion to reduce wet-weather SSO volume by 94 percent compared to 2002 hydraulic conditions.

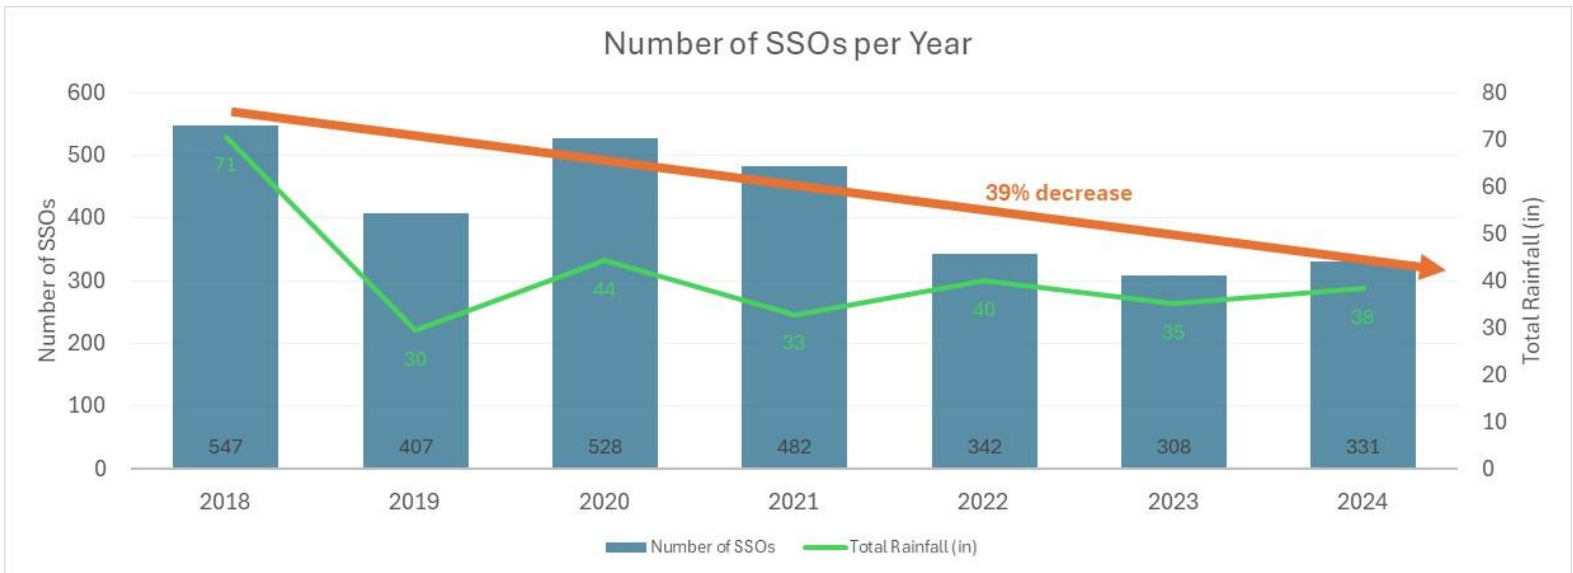

Sewer rates for DPW customers have increased as the CD/MCD program has matured due, in large part, to the unprecedented investments in the collection system made under the programs. The table below summarizes the annual rate increases.

Year	Wastewater rate increase
2002	10.0%
2003	9.0%
2004	9.0%
2005	9.0%
2006	9.0%
2007	9.0%
2008	4.0%
2009	9.0%
2010	9.0%
2011	9.0%
2012	9.0%
2013	15.0%

Year	Wastewater rate increase
2014	11.0%
2015	11.0%
2016	9.9%
2017	9.9%
2018	9.9%
2019	9.0%
2020	9.0%
2021	9.0%
2022	3.5%
2023	3.5%
2024	3.5%
2025	18.06%

As a result of the DPW customers' significant and continued investment in the sanitary sewer infrastructure, the region has experienced significant reductions in the number and volume of dry- and wet-weather SSOs as summarized in the graphics below. Data prior to 2018 is not included in the graphs due to differing SSO reporting procedures.

The decreased number and volume of SSOs has contributed to significant environmental improvements as quantified by DPW’s Stream Impact Sampling Program (SIS), which monitors E. coli bacteria levels in non-tidal freshwaters and Enterococcus bacteria levels in tidal or brackish waters. The table below shows overall decreasing trends of E. Coli in multiple watersheds throughout the City.

Watershed	Subwatershed	Site	Fiscal Year (geometric mean - MPN/100 ml)							2018-2024 Percent Difference
			2018	2019	2020	2021	2022	2023	2024	
Back River	Herring Run	Harford Road	345	618	893	402	195	234	231	-33%
	Herring Run	Pulaski Highway	162	297	385	196	195	178	152	-6%
	Moore’s Run	Biddle & 62 nd Streets	1,093	896	557	481	418	432	328	-70%
Jones Falls	Moore’s Run	Western Run	326	1,223	297	262	225	163	337	3%
Gwynns Falls	Gwynns Falls	Purnell Drive	816	692	826	937	347	183	266	-67%
	Gwynns Falls	Hilton Street	348	298	302	1,024	235	213	184	-47%
	Gwynns Falls	Washington Boulevard	2,668	2,164	947	1,606	734	1,053	1,085	-59%

Beginning in 2021, SIS samples were not diluted; therefore, the geometric mean for some sample locations may be higher.

Additionally, according to the University of Maryland Center for Environmental Science Eco Health Report Card, during the period from 2018 to 2023 the ecosystem health score for the Upper Bay of the Chesapeake Bay [at confluence with the Patapsco River and Back River] increased from 13 to 61 percent, which, DPW believes, is another indication that the decreased number and volume of SSOs are contributing to improved regional water quality.

Despite the significant financial costs and resulting regional water quality improvements, DPW continues to heavily invest in the wastewater collection system infrastructure, as detailed in this Phase II Plan. Prior to receiving EPA and MDE approval of the Phase II Plan, DPW proceeded with implementing the inspection and rehabilitation of 48 high inflow/infiltration (I/I) basins at a conceptual-level estimated cost of \$360M. The rehabilitation of the 48 basins and elimination of the existing SSO structures is estimated to reduce wet-weather SSO volume by approximately 10 percent for a total reduction of 94 percent compared to 2002 hydraulic conditions. In relation to SSOs, wet weather is defined as at least 0.1 inches of rain recorded at the nearest rain gauge

within the previous 72 hours. As summarized in the table below, eliminating the remaining 6-percent of SSO volume (i.e. reaching and maintaining the 5- and 10-year LOPs) will come at significant financial costs with relatively minimal water quality improvements.

Improvement plan	Model-predicted wet-weather conditions			Conceptual-level estimated cost (\$ million)
	Number of SSOs in 5- and 10-year LOP areas	SSO volume (million gallons)	Estimated SSO volume reduction ¹	
Existing condition	104	389	84%	N/A
Sewer/manhole rehabilitation & SSO Structure elimination	59	152	94%	360
Hydraulic improvements to meet 5 & 10-year LOP	0	0	100%	674

¹ Compared to 2002

The average water bill is \$142.79 per household, which is a substantial burden for ratepayers, particularly low-income families. With a poverty rate of 21-percent, households in the City of Baltimore cannot continue supporting significant rate increases. As noted in the table above, the Phase II Plan work that is currently underway will cost approximately \$360M and will reduce SSO volume by 94-percent; however, meeting the MCD LOP will cost an additional \$674M, the cost of which is borne by City ratepayers. Rising utility rates, especially at a rapid pace, can lead to financial strain for many households and results in higher delinquency rates as customers struggle to pay for the rising costs. The City has limited tools to combat delinquency. The City has not imposed service disconnections for more than 8 years, and the use of tax sale is severely constrained by State law. The City’s Water4All customer assistance program only covers household incomes up to 200% of the federal poverty line, which leaves a significant portion of the population living just above the poverty line but still facing financial hardship. Additionally, there are few to no available federal or state grant programs to assist customers with their utility bills, leaving them without additional financial resources to manage rising costs.

DPW’s current debt and borrowing pressure the utility’s financial stability and place an undue burden on future generations. As debt accumulates, future ratepayers will be responsible for repaying the debt obligations and face even higher rates. The City believes that mandating future improvements based solely on a theoretical hydraulic model and no recorded SSO information is irresponsible and will force the utility to overleverage and accumulate debt, which will jeopardize its financial stability and create an environment where it cannot secure necessary funding for capital projects.

To mitigate the risk to financial health of City customers, this Plan proposes an adaptive approach that consists of:

- Continuing system improvements to reduce wet-weather inflow/infiltration
- Expanding DPW’s existing flow monitoring program to confirm model-predicted SSOs and evaluating possible future improvements
- Executing select system improvements as detailed in this Plan based on recorded recurring SSO information
- Continuing the hydraulic modeling partnership with Baltimore County Department of Public Works & Transportation (DPW&T) and reviewing flow monitoring data to identify future improvements, if any that will eliminate existing overflow structures that are located in the County and meet the MCD LOP in the City.

To further reduce financial risk, the City intends to submit for state and/or federal financial aid and will require significant cost-sharing partnerships.

3. Evaluation of Phase I Plan Rehabilitation Project Effectiveness

In 2021, DPW completed post-construction flow monitoring (PCFM) analyses in the sewersheds experiencing high rainfall dependent inflow/infiltration (RDII) as summarized below:

Sewershed	RDII Reduction (%)
Dundalk	-42
Gwynns Falls	-49
High Level	-19
Herring Run	N/A
Jones Falls	-62
Low Level	-41
Outfall	-85
Patapsco	-69

Pre- and post-construction flow monitoring locations were the same in all cases with exceptions where the original location no longer existed or was no longer appropriate. The flow monitoring time periods were:

- Pre-construction: May 2006 to April 2007
- Post-construction period 1: December 2020 to November 2021
- Post-construction period 2: July 2022 to September 2023

The capture coefficient is an estimated factor used in hydraulic modeling to predict the amount of rainfall runoff that is captured by the wastewater collection system. Lower capture coefficients indicate less rainfall runoff entering the collection system. A total of 29 pre-construction and 41 post-construction storms that occurred during the flow monitoring period were analyzed to calculate an overall pre- and post-construction capture coefficient at each flow meter. The weighted average analyses indicated a capture coefficient reduction of:

- 51 percent assuming comprehensive sewer/manhole rehabilitation in the entire flowmeter basin
- 33 percent reduction in flowmeter basins where miscellaneous structure improvements were completed

The capture coefficient was also calculated using the Control Basin Method. The Control Basin Method compares the pre- and post-construction hydraulic conditions of a flowmeter basin that has undergone comprehensive sewer/manhole rehabilitation with a flowmeter basin, referred to as the control basin, that has not had any system improvements. The two flowmeter basins have similar characteristics such as:

- Size
- Land use
- Population
- Geographic area
- Sewer mileage
- Percent of sewers by pipe diameter

The table below summarizes the Control Basin Method analysis results.

Sewershed	Meter basin			Control basin		
	ID	Area (acres)	Pre- versus post construction calculated capture coefficient reduction (%)	ID	Area (acres)	Calculated capture coefficient reduction (%)
Dundalk	DU03	174	-21	LL12	398	N/A
Dundalk	DU06	439	-41	LL12+LL13	398	N/A
Dundalk	DU07	165	-67	LL12	398	N/A
High Level	HL02	108.1	-25	HL04	131.3	19
Low Level	LL17	82.8	-23	LL21	150.3	-5
Low Level	LL18	85.5	-63	LL21	150.3	-55
Low Level	LL30	75.94	-8	LL35	98.89	22
Low Level	LL30	75.94	-8	LL36	109.62	-16
Low Level	LL34	87.48	-21	LL35	98.89	-18
Low Level	LL34	87.48	-21	LL36	109.62	-35
Outfall	OUT01	187	-85	DU04	215.4	21
Patapsco	PA05	358.71	-79	PA04	135.36	-78
Patapsco	PA05A	179.4	-61	PA04	135.36	-46
Patapsco	PA11	203.36	-60	PA04	135.36	-47
Gwynns Falls	GF22	197.5	-49	JF16	98.9	10
High Level	HL37	179	-16	HL32	116.1	-84
High Level	HL40	160.4	-13	LL33	84.5	-85
High Level	HL41	108.8	-29	LL33	84.5	-60
Jones Falls	JF07	135.6	-84	JF08	54.5	-79
Jones Falls	JF09	118.4	-71	JF16	98.9	-85
Jones Falls	JF10	145.9	-25	JF16	98.9	-90
Jones Falls	JFWR2	137.2	-73	JF42	191.9	-65
Low Level	LL19	168.1	-63	LL18	85.5	34
Average			-50			-41

The Control Basin Method produced suspect results; therefore, DPW used the weighted average capture coefficient reduction for hydraulic modeling analyses. A calculated capture coefficient reduction of 0 indicates no reduction; however, the significantly higher Control Basin Method values calculated for flowmeter basins HL02, LL3, OUT01, and LL19 indicate an inherent data and/or methodology issue. Additionally, the Control Basin Method could not be used for flowmeter basins DU03, DU06, and DU07 since the flowmeter data for the control basin and for the flowmeter basins were not recorded during the same time period.

The hydraulic model is updated on an annual basis to incorporate structural changes to the City’s system, adjust hydrology based on new meter data, and incorporate other updated information as it is provided to the City. The following updates were made to the City’s hydraulic model after submittal of the Phase II Plan in 2023 and have been incorporated into the most recent modeling:

- In August 2023, the County provided the City with updated hydraulic models representing the existing and future conditions. The future conditions models were updated based on design/as-built drawings of projects and updating sanitary flow projections.
- City model recalibrated based flow monitoring data that was recorded during 2022-2023 from:
 - Post-construction flow monitors
 - SSO notification flow monitors

- Environmentally sensitive flow monitors

3.1. Updated Phase I Evaluation

Not all Phase I projects were completed when the original Phase II Plan was submitted in May 2023. DPW has now completed all Phase I projects anticipated to reduce I/I and incorporated the PCFM data and confirm the results of the original Phase I Plan effectiveness evaluation. After analyzing all PCFM data, the City determined there is no change in the 51 percent capture coefficient reduction determined from the previous evaluation.

4. Expected Effectiveness of Proposed Projects

Based on the Phase I Plan project effectiveness evaluation, DPW expects a 51-percent capture coefficient reduction in flowmeter basins where all sewers/manholes are rehabilitated and a 33-percent reduction where miscellaneous structural improvements are completed. The expected capture coefficient reductions will be incorporated into future hydraulic modeling efforts to evaluate system improvements with the potential to eliminate the engineered SSO structures.

5. Identification of Remaining Deficiencies not Addressed by Phase I Projects

DPW has completed all Phase I projects; however, there remain some miscellaneous collection system deficiencies as detailed below.

5.1. Miscellaneous Structural Improvements

The deficiencies listed below were included in previous sanitary contracts; however, work required extensive engineering design. The design work has delayed completion of the repair work, which remains outstanding. Repair work will be completed under a new sanitary contract.

Manhole ID	Sewer ID	Previous sanitary contract	New sanitary contract
S27I_028MH		963	1029
S01OO_011MH		977	1029
	S01OO_011G1	977	1029
	S03MM_002G1	977	1004
	S03KK_016G1	977	1004
	S03KK_019G1	977	1004
S03MM_065MH		977	1029
S05GG_002MH		977	1029
S07GG_011MH		977	1029
S09EE_007MH		977	1029
S09EE_031MH		977	1029
	S03SS_020G1	977	1004

5.2. SSO Structure Elimination

Removing sediment deposition in the Outfall Interceptor and increasing hydraulic capacity at the Stony Run Pump Station will allow the closure of SSO Structures 67, 72, 152, and 154 with no model-predicted SSOs in the tributary area.

6. Identification of Rehabilitation and Corrective Actions Needed to Meet 5- and 10-Year LOP

DPW defines the 5- and 10-year Level of Protection (LOP) as an average of one overflow event in 5 or 10 years, respectively. The definition follows the hydrologic frequency definition that an X-year event is an event that has a probability of occurring 1/X in any given year (e.g., a 5-year event occurs with a probability of 20 percent in any given year).

DPW determined that the rainfall data between 1999 and 2010 was a typical rainfall period that represented the 5- and 10-year peak flow recurrence values in that a 5-year peak flow could occur 4 times over a 20-year period, and the 10-year peak flow could occur twice, hence the derivation of the 5- and 10-year LOP.

6.1. Corrective Action Decision Making Criteria and Prioritization Scheme

DPW developed an adaptive approach to identify rehabilitation and corrective actions. The approach focuses on:

- Continuing sewer/manhole rehabilitation work to reduce wet-weather I/I flow. DPW identified 48 flowmeter basins with the highest return on investment in terms of I/I volume reduction per dollar spent. The rehabilitation work is the most cost-effective method to reduce wet-weather I/I flow and resulting SSOs; therefore, DPW has prioritized the work over other improvement projects.
- Increasing wet-weather hydraulic capacity, where needed, based on hydraulic modeling findings and confirmed by reported/recorded SSOs. DPW will also complete flow monitoring analysis at locations that do not meet the LOP based on hydraulic-modeling results and cannot be confirmed by reported/recorded SSOs
- Continuing hydraulic modeling partnership between the City and County to analyze and review future flow monitoring and collaborate on future hydraulic modeling efforts

Since there are no known/identified deficiencies that contribute to building backups, the above criteria and prioritization scheme do not consider preventing building backups.

6.2. Existing and Model-Predicted SSOs

Appendix A provides maps and lists of current and future model-predicted SSOs. The future hydraulic model prediction is based on DPW completing all sewer rehabilitation and hydraulic capacity improvements detailed in the plan. The future model-predicted SSOs shown in Appendix A will not preclude DPW from complying with the MCD LOP requirements because the:

1. Model-predicted SSOs are not located in environmentally sensitive areas and/or
2. Number of model-predicted SSOs in any location are less than the 5- or 10-year LOP

The number and volume of SSOs shown in Appendix A are, significantly less than recorded at some locations; therefore, DPW believes that the hydraulic model may be over-predicting the number of sewer overflows.

6.3. Environmentally Sensitive Areas

In accordance with the MCD Paragraph 9, Item c(v)(g), a list of updated of environmentally sensitive areas and associated map are provided in Appendix B.

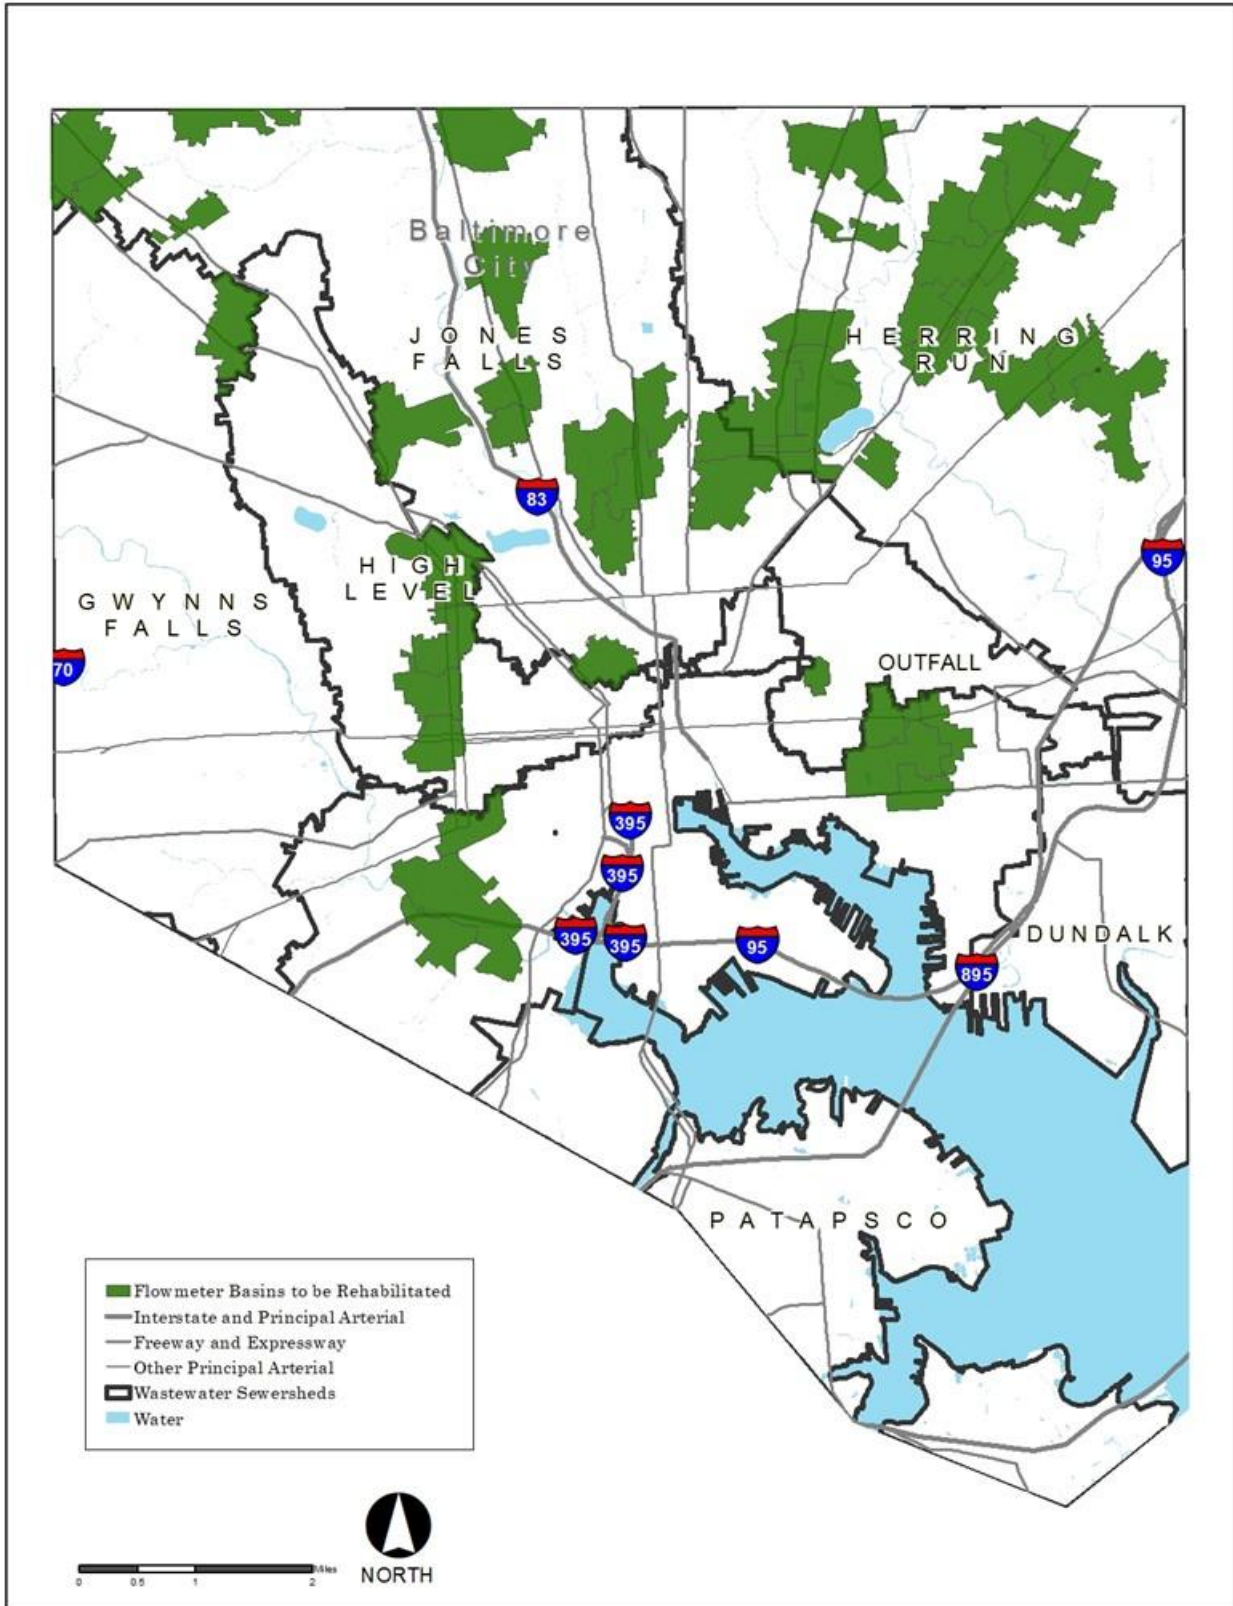

6.4. Reducing Wet-Weather I/I Flow

Hydraulic improvements have been identified that will (1) reduce RDII or (2) increase wet weather capacity. DPW will reduce RDII in the basins by rehabilitating or replacing sewers and manholes that have structural defects which have been identified by field inspections in the meter basins listed in the table below.

Sewershed	Flowmeter basin ID
Gwynns Falls	GF34
High Level	HL20
High Level	HL21
High Level	HL22
High Level	HL24
Herring Run	HR07B
Herring Run	HR09A

Low Level	LL42
Outfall	OUT05

The map below shows the locations of the meter basins.

DPW will complete flow monitoring analysis in each meter basin to confirm model-predicted SSOs and post-construction flow monitoring analysis for the Phase II Plan. The flow meter basins are preliminary and may be revised based on future analysis and/or needs.

The sewer/manhole rehabilitation work is estimated to cost \$360M.

6.5. Increasing Wet-Weather Hydraulic Capacity

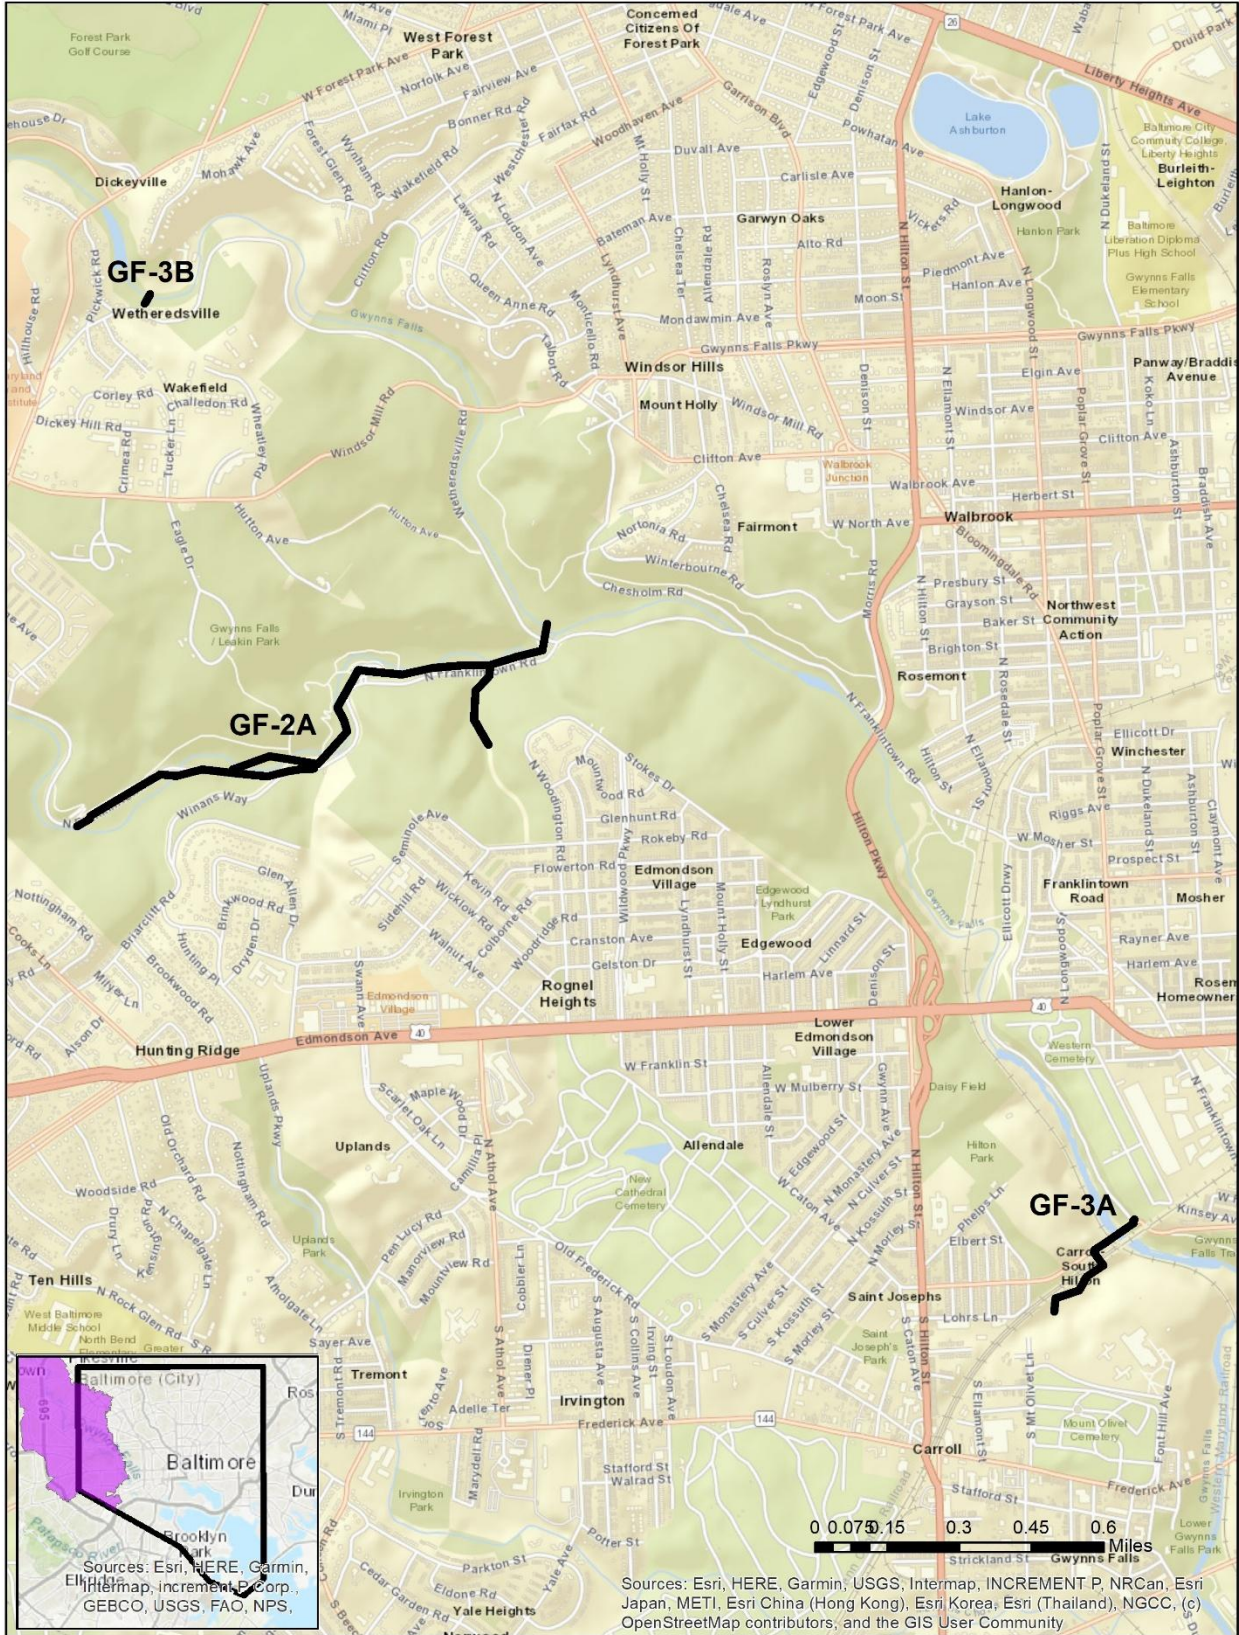

DPW received hydraulic modeling data from Baltimore County DPW&T after submitting the Phase II Plan in May 2023. The data was incorporated into DPW’s hydraulic model and the collection system was analyzed to identify various hydraulic improvements that will increase capacity and eliminate recurring model-predicted SSOs at environmentally sensitive sites. The following sections identify sewers with model-predicted wet-weather SSOs which do not meet the 5- or 10-year level of protection criteria and detail DPW’s associated corrective actions.

6.5.1. Gwynns Falls Sewershed

Below is a summary of recorded SSOs in the City that, based on the hydraulic model, are associated with the sewers that do not meet the level of protection criteria.

Phase II Project ID	Manhole ID		No. of model-predicted SSOs		No. of reported SSOs (since 10/2017)	Total Recorded SSO Volume (gal)	Estimated Cost	Corrective action
	Upstream	Downstream	10 year	5 year				
GF-2A	S06AA_002MH	S03GG_008MH	197	0	7	45,190	\$27,132,202	Increase hydraulic capacity
GF-3A	S11K_018MH	S13I_019MH	4	0	2	4,182	\$4,307,391	Flow monitor
GF-3B	S04OO_025MH	S04OO_014MH	4	0	3	2,495	\$214,824	Flow monitor

As indicated in the table above, the sewers associated with Project GF-2A do not meet the LOP criteria based on the number of reported/recorded SSOs; therefore, DPW will complete hydraulic improvements of the sewer segments, as needed. A copy of the SSO work orders is provided in Appendix C. The sewers associated with Projects GF-3A and GF-3B do not meet the LOP based on hydraulic modeling; however, the number of reported/recorded SSOs are insignificant or significantly less than predicted by the model. DPW believes that the hydraulic model may be over-predicting the number of sewer overflows; therefore, DPW will complete confirmatory flow monitoring and analysis to determine if hydraulic improvements are needed. The project extents (i.e. upstream and downstream manhole IDs) noted above may be revised based on additional analysis and/or design work. The map below shows the location of each project.

6.5.2. Herring Run Sewershed

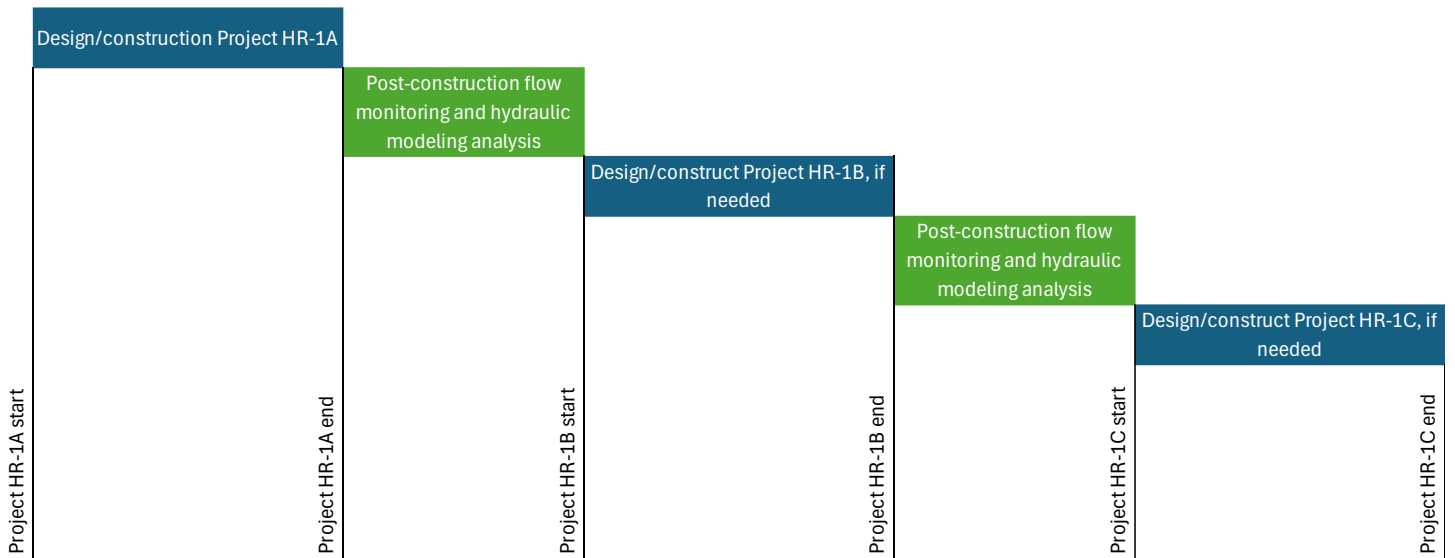

On January 22 and 29, 2025 DPW&T eliminated SSO Structures 41 and 129, respectively. According to DPW&T, there have been no recorded SSOs at or in the vicinity of the SSO structures since elimination.

Below is a summary of recorded SSOs in the City that, based on the hydraulic model, are associated with the sewers that do not meet the level of protection criteria.

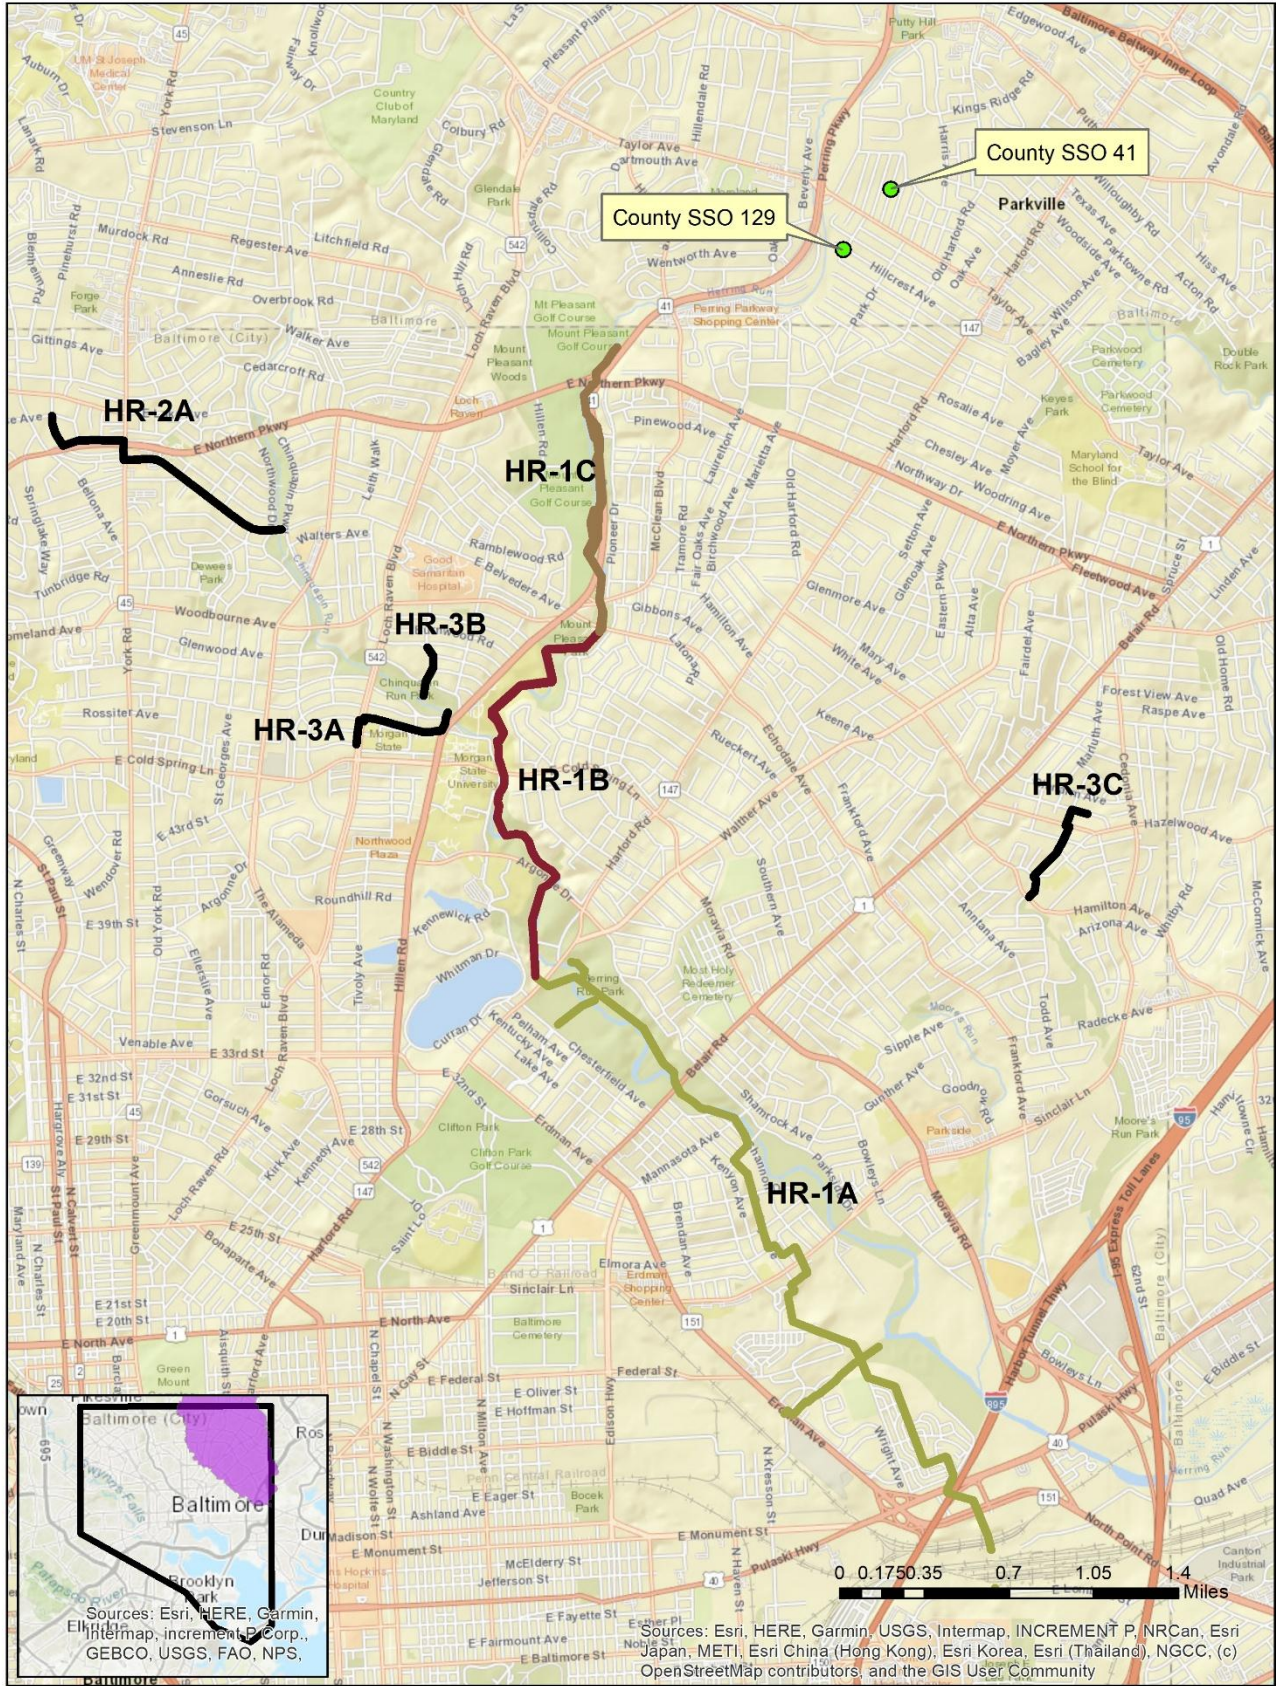

Phase II Project ID	Manhole ID		No. of model-predicted SSOs		No. of reported SSOs (since 10/2017)	Total Recorded SSO Volume (gal)	Estimated Cost	Corrective action
	Upstream	Downstream	10 year	5 year				
HR-1A	S49CC1019MH	S65AA_001MH	81	7	66	71,280,032	\$181,798,613	Increase hydraulic capacity
HR-1B	S51UU1013MH	S49CC1019MH	31	0	6	3,485	\$61,732,410	Flow monitor
HR-1C	S53II2015MH	S51UU1013MH	14	0	1	1,220	\$38,124,083	Flow monitor
HR-2A	S33EE2015MH	S41YY1040MH	6	28	2	45,305	\$17,132,840	Flow monitor
HR-3A	S43OO1014MH	S47QQ1003MH	0	23	5	4,165	\$6,607,293	Flow monitor
HR-3B	S47SS1015MH	S47QQ1001MH	4	0	0	0	\$2,092,403	Flow monitor
HR-3C	S69KK1013MH	S67GG1006MH	0	10	1	6	\$6,106,764	Flow monitor

As indicated in the table above, the sewers associated with Project HR-1A do not meet the LOP criteria based on the number of reported/recorded SSOs; therefore, DPW will complete hydraulic improvements of the sewer segments, as needed. A copy of the SSO work orders is provided in Appendix C. The sewers associated with Projects HR-1B, HR-1C, HR-2A, HR-3A, HR-3B and HR-3C do not meet the LOP based on hydraulic modeling; however, the number of reported/recorded SSOs are insignificant or significantly less than predicted by the model. DPW and DPW&T believe that the hydraulic model may be over-predicting the number of sewer overflows; therefore, DPW will complete confirmatory flow monitoring and analysis to determine if hydraulic improvements are needed. The graphic below summarizes DPW's sequencing for Projects HR-1A, HR-1B and HR-1C.

Projects HR-1A, HR-1B and HR-1C sequencing

The project extents (i.e. upstream and downstream manhole IDs) noted above may be revised based on additional analysis and/or design work. The map below shows the location of each project.

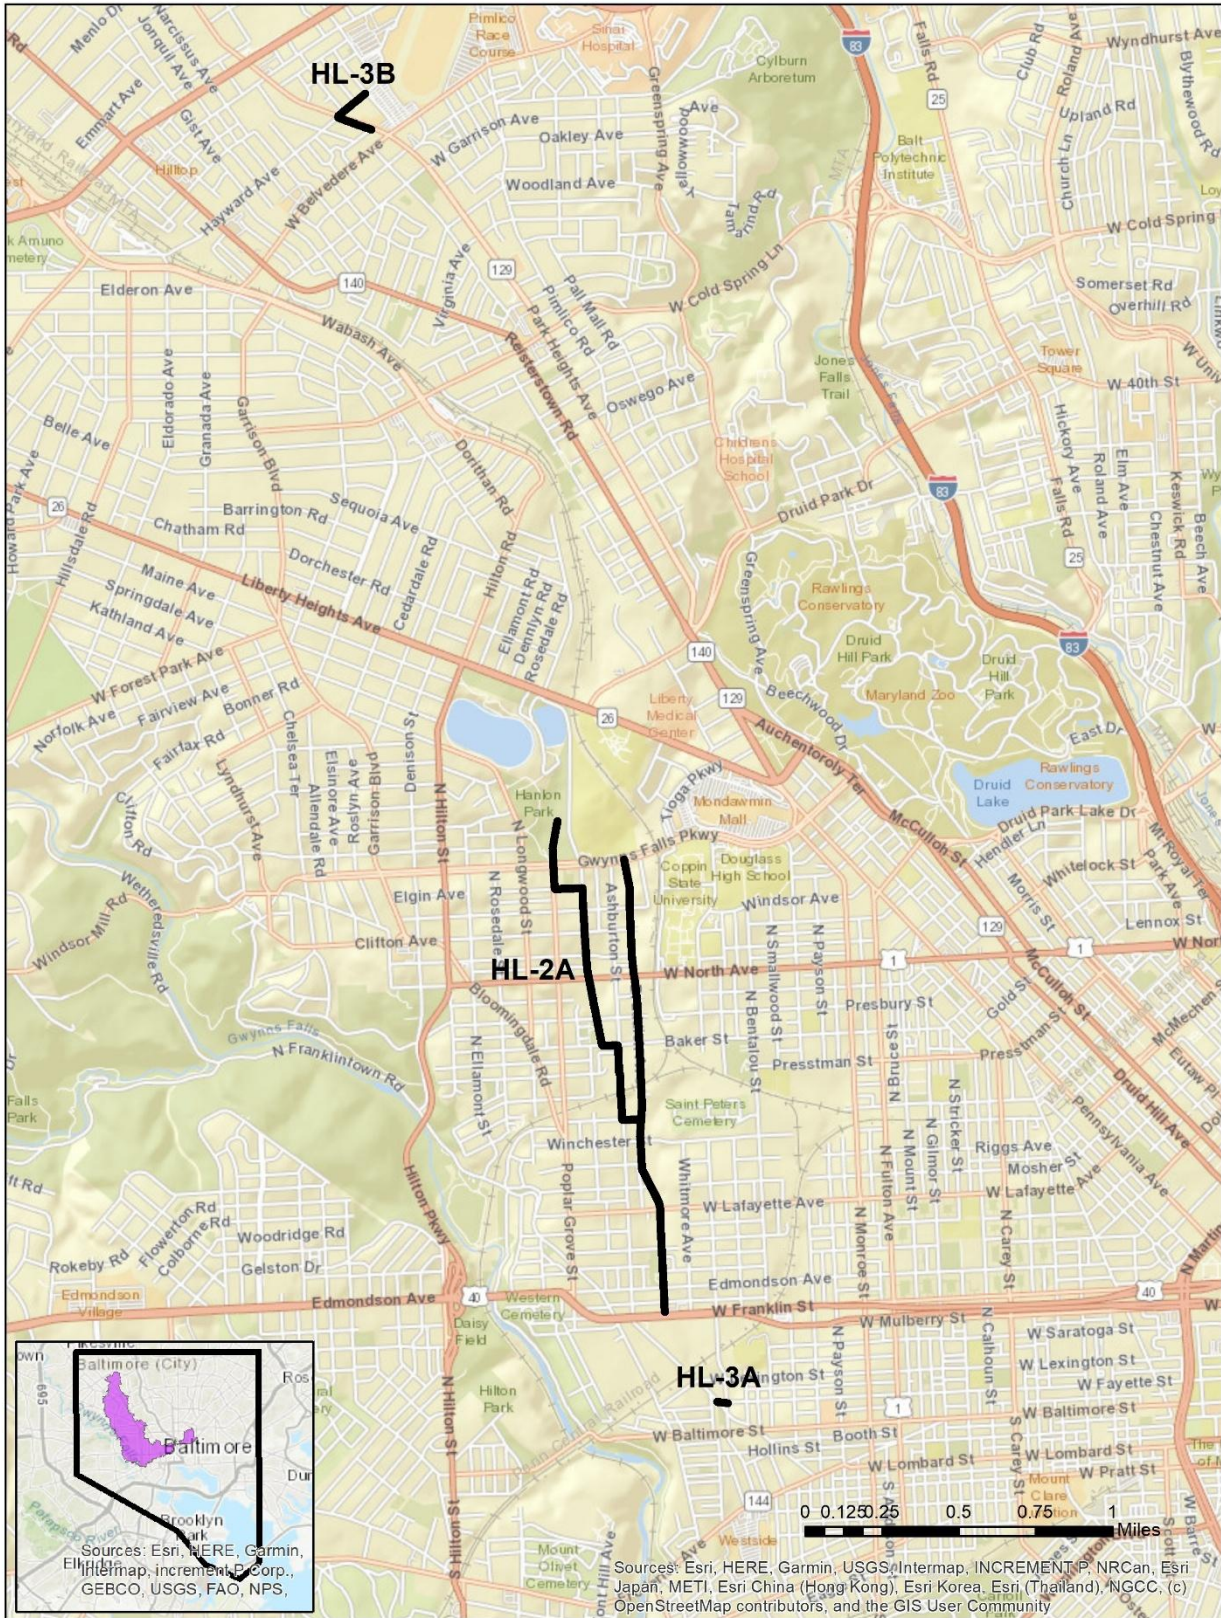

6.5.3. High Level Sewershed

Below is a summary of recorded SSOs in the City that, based on the hydraulic model, are associated with the sewers that do not meet the level of protection criteria.

Phase II Project ID	Manhole ID		No. of model-predicted SSOs		No. of reported SSOs (since 10/2017)	Total Recorded SSO Volume (gal)	Estimated Cost	Corrective action
	Upstream	Downstream	10 year	5 year				
HL-2A	S13OO_004MH	S15C_047MH	34	23	8	8,834	\$52,342,948	Increase hydraulic capacity
HL-3A	S17G_009MH	S17G_023MH	0	0	0	0	\$549,060	Flow monitor
HL-3B	S07SS1011MH	S07QQ1012MH	0	11	0	0	\$2,836,750	Flow monitor

As indicated in the table above, the sewers associated with Project HL-2A do not meet the LOP criteria based on the number of reported/recorded SSOs; therefore, DPW will complete hydraulic improvements of the sewer segments, as needed. A copy of the SSO work orders is provided in Appendix C. The sewers associated with Projects HL-3A and HL-3B do not meet the LOP based on hydraulic modeling; however, the number of reported/recorded SSOs are insignificant or significantly less than predicted by the model. DPW believes that the hydraulic model may be over-predicting the number of sewer overflows; therefore, DPW will complete confirmatory flow monitoring and analysis to determine if hydraulic improvements are needed. The project extents (i.e. upstream and downstream manhole IDs) noted above may be revised based on additional analysis and/or design work. The map below shows the location of each project.

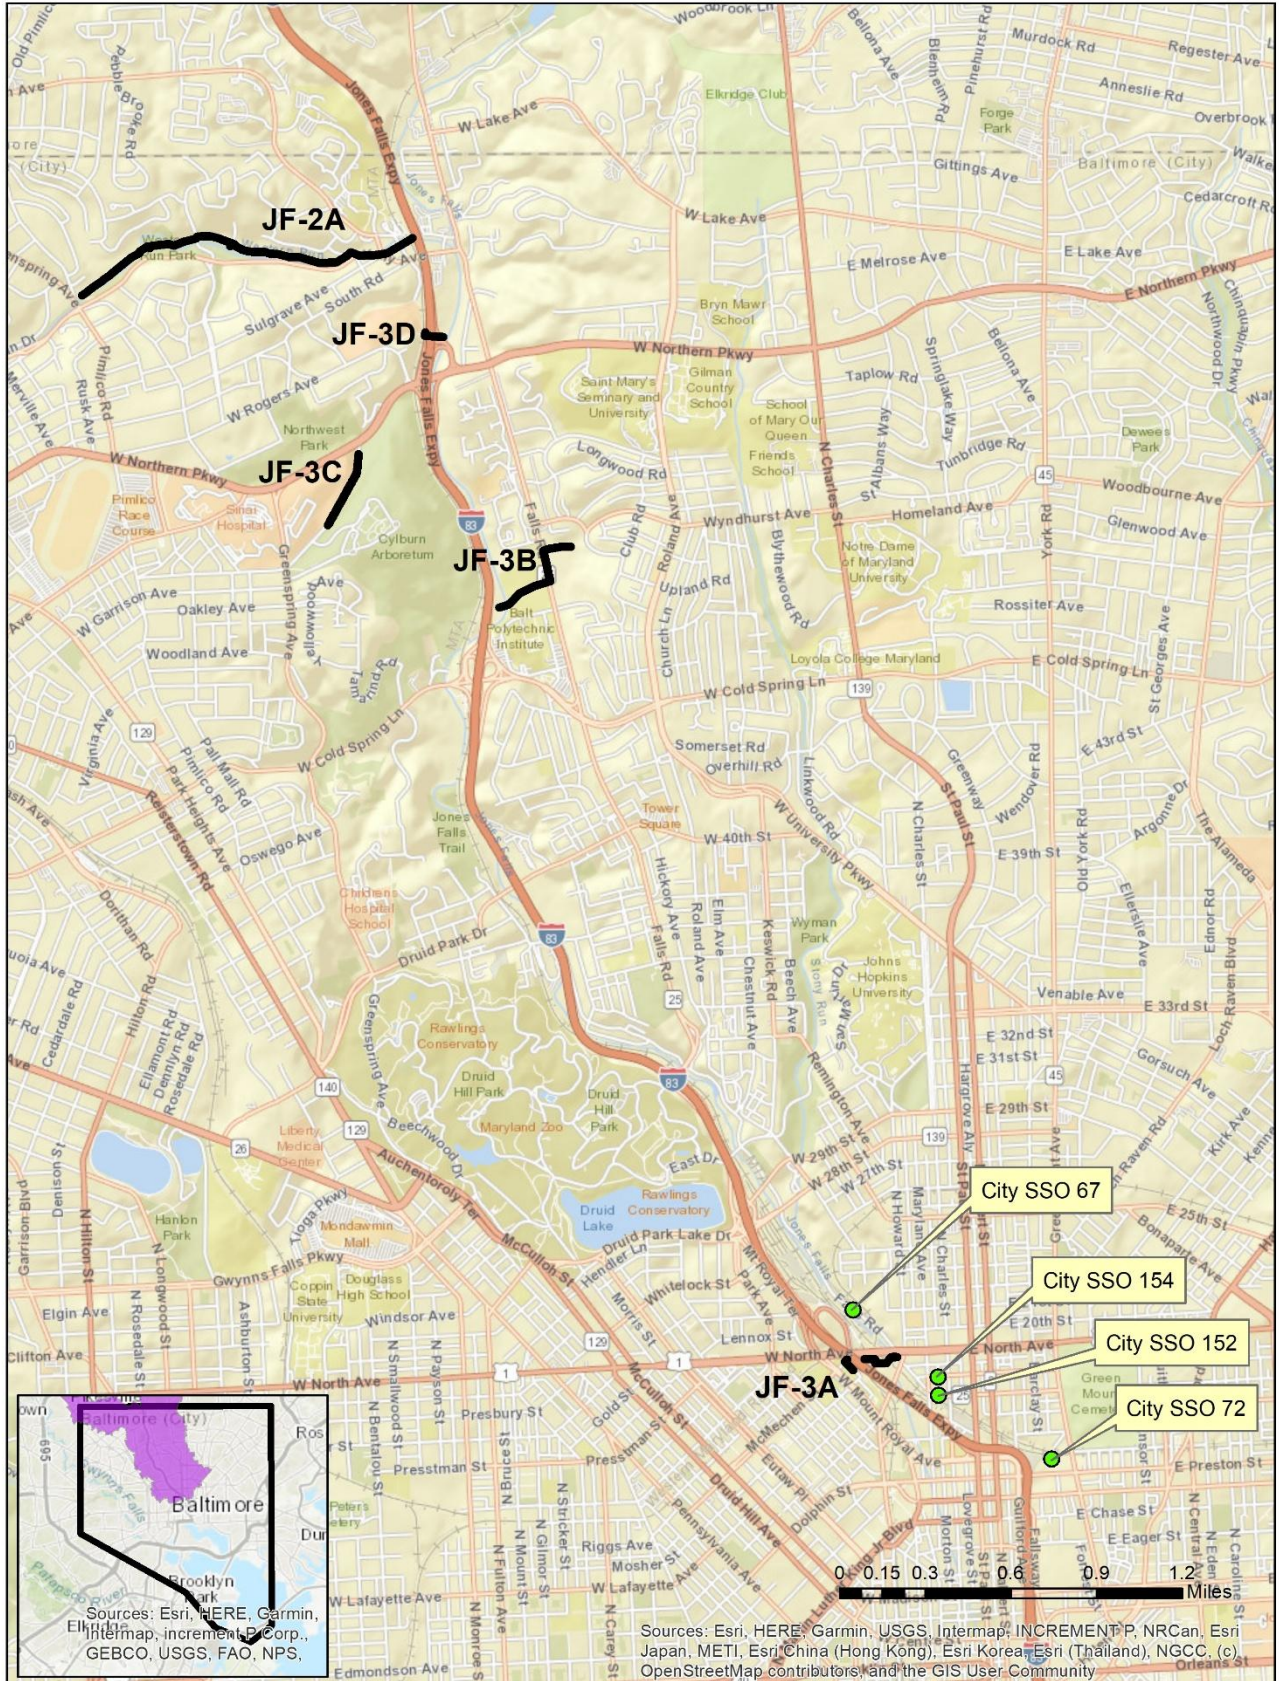

6.5.4. Jones Falls Sewershed

Below is a summary of recorded SSOs in the City that, based on the hydraulic model, are associated with the sewers that do not meet the level of protection criteria.

Phase II Project ID	Manhole ID		No. of model-predicted SSOs		No. of reported SSOs (since 10/2017)	Total Recorded SSO Volume (gal)	Estimated Cost	Corrective action
	Upstream	Downstream	10 year	5 year				
JF-2A	S09CC2101MH	S19GG2011MH	12	0	14	1,027,995	\$25,582,555	Increase hydraulic capacity
JF-3A	S31KK_001MH	S33KK_130BN	8	0	0	0	\$4,827,636	Flow monitor
JF-3B	S23SS1042MH	S21QQ1042MH	10	11	6	15,320	\$5,033,341	Increase hydraulic capacity
JF-3C	S17SS1003MH	S17WW1006MH	4	0	4	14,975	\$3,352,523	Flow monitor
JF-3D	S19AA2060MH	S19AA2053MH	3	0	0	0	\$1,196,382	Flow monitor

As indicated in the table above, the sewers associated with Projects JF-2A and JF-3B do not meet the LOP criteria based on the number of reported/recorded SSOs; therefore, DPW will complete hydraulic improvements of the sewer segments, as needed. A copy of the SSO work orders is provided in Appendix C. The sewers associated with Projects JF-3A, JF-3C and JF-3D do not meet the LOP based on hydraulic modeling; however, the number of reported/recorded SSOs are insignificant or significantly less than predicted by the model. DPW believes that the hydraulic model may be over-predicting the number of sewer overflows; therefore, DPW will complete confirmatory flow monitoring and analysis to determine if hydraulic improvements are needed. The project extents (i.e. upstream and downstream manhole IDs) noted above may be revised based on additional analysis and/or design work. The map below shows the location of each project.

6.5.5. Low Level Sewershed

Below is a summary of recorded SSOs in the City that, based on the hydraulic model, are associated with the sewers that do not meet the level of protection criteria.

Phase II Project ID	Manhole ID		No. of model-predicted SSOs		No. of reported SSOs (since 10/2017)	Total Recorded SSO Volume (gal)	Estimated Cost	Corrective action
	Upstream	Downstream	10 year	5 year				
LL-1A	S23Y__017MH	S35M__091CT	55	0	19	4,012,990	\$72,885,295	Increase hydraulic capacity
LL-2A	S43S__010MH	S37M__030MH	0	6	3	6,006	\$24,742,567	Increase hydraulic capacity
LL-2B	S15S__003MH	S21W__009MH	28	0	9	8,444,945	\$20,882,718	Increase hydraulic capacity
LL-3A	SS-20	S41Y__009MH	0	5	0	0	\$4,761,361	Flow monitor
LL-3B	S41W__012MH	S41W__058MH	0	6	0	0	\$524,148	Flow monitor
LL-3C	S57C__017MH	S57A__008MH	0	5	0	0	\$728,805	Flow monitor

As indicated in the table above, the sewers associated with Projects LL-1A, LL-2A and LL-2B do not meet the LOP criteria based on the number of reported/recorded SSOs; therefore, DPW will complete hydraulic improvements of the sewer segments, as needed. A copy of the SSO work orders is provided in Appendix C. The sewers associated with Projects LL-3A, LL-3B and LL-3C do not meet the LOP based on hydraulic modeling; however, the number of reported/recorded SSOs are insignificant or significantly less than predicted by the model. DPW believes that the hydraulic model may be over-predicting the number of sewer overflows; therefore, DPW will complete confirmatory flow monitoring and analysis to determine if hydraulic improvements are needed. The project extents (i.e. upstream and downstream manhole IDs) noted above may be revised based on additional analysis and/or design work. The map below shows the location of each project.

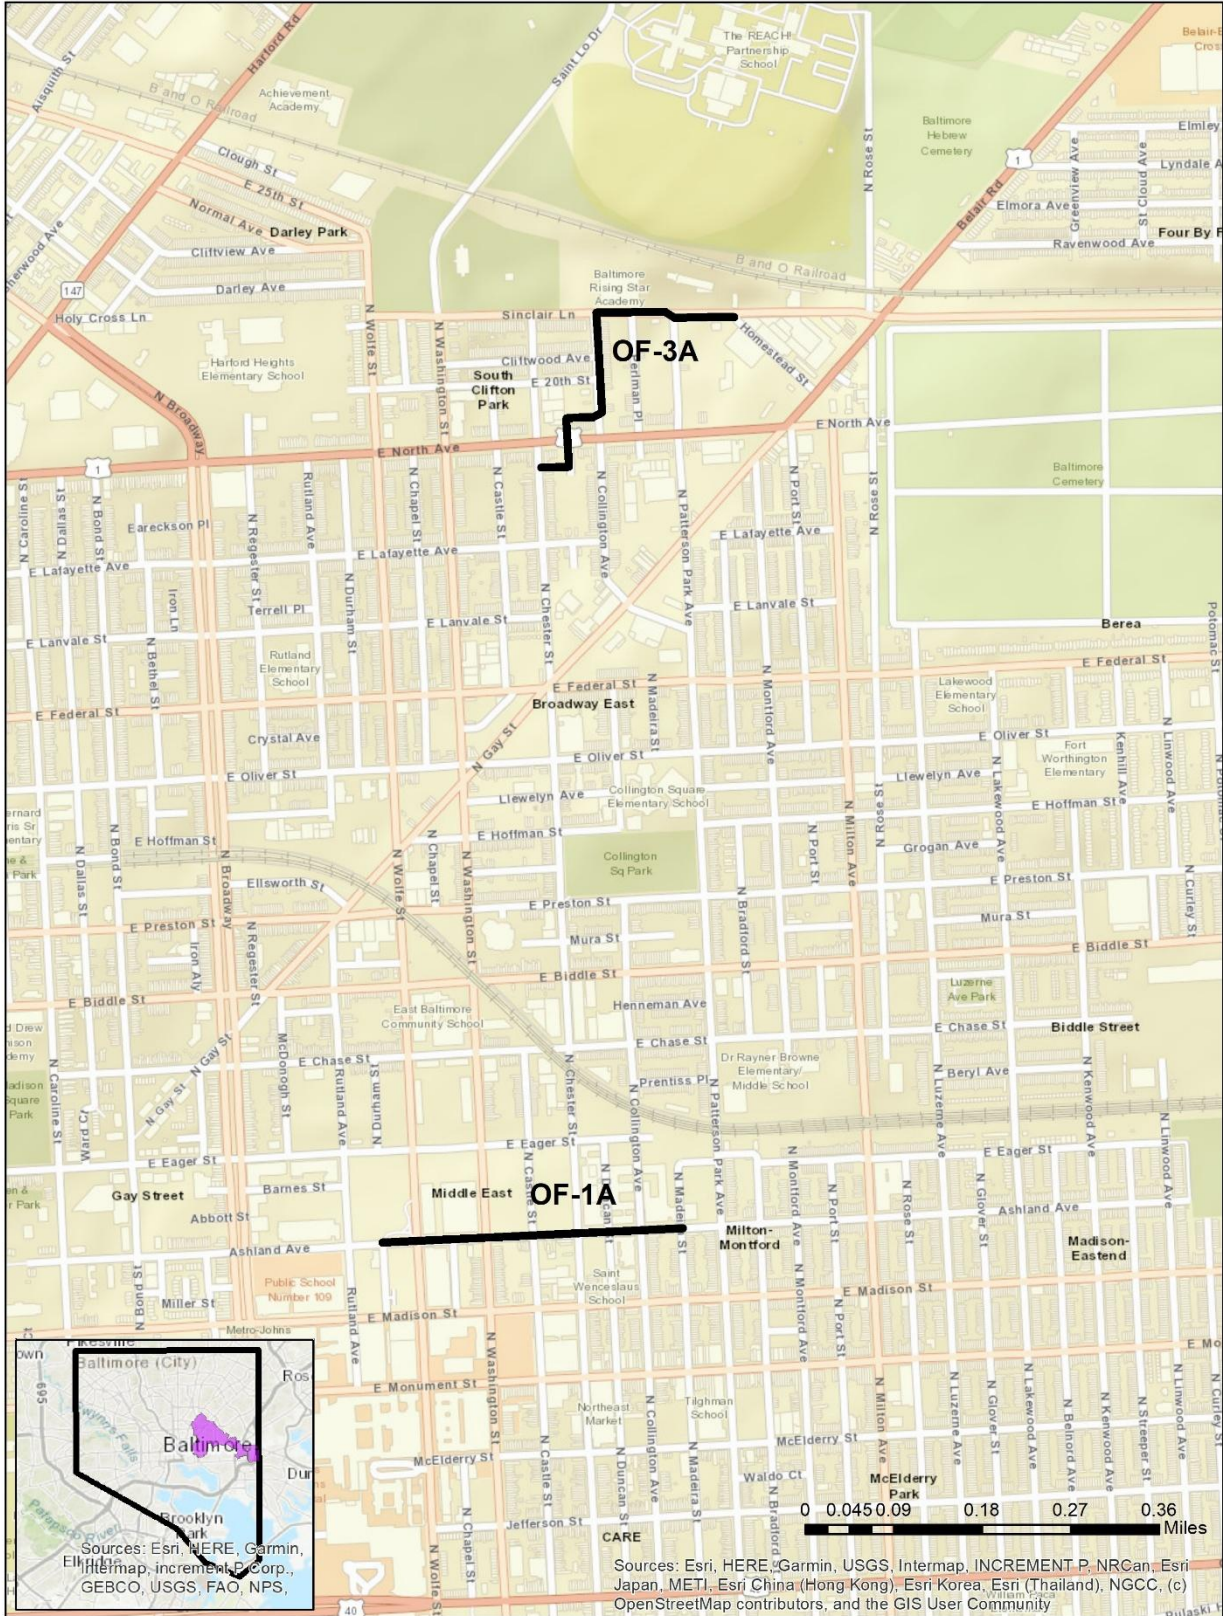

6.5.6. Outfall Sewershed

Below is a summary of recorded SSOs in the City that, based on the hydraulic model, are associated with the sewers that do not meet the level of protection criteria.

Phase II Project ID	Manhole ID		No. of model- predicted SSOs		No. of reported SSOs (since 10/2017)	Total Recorded SSO Volume (gal)	Estimated Cost	Corrective action
	Upstream	Downstream	10 year	5 year				
OF-3A	S45MM_009MH	S47MM_005MH	0	7	1	320	\$4,498,183	Flow monitor
OF-1A	S45CC_006MH	S47CC_009MH	0	0	17	11,008,150	\$21,500,996	Increase hydraulic capacity

As indicated in the table above, the sewers associated with Project OF-1A have experienced recurring SSOs; therefore, DPW will complete hydraulic improvements of the sewer segments, as needed. A copy of the SSO work orders is provided in Appendix C. The sewers associated with Project OF-3A do not meet the LOP based on hydraulic modeling; however, the number of reported/recorded SSOs are insignificant or significantly less than predicted by the model. DPW believes that the hydraulic model may be over-predicting the number of sewer overflows; therefore, DPW will complete confirmatory flow monitoring and analysis to determine if hydraulic improvements are needed. The project extents (i.e. upstream and downstream manhole IDs) noted above may be revised based on additional analysis and/or design work. The map below shows the location of each project.

6.5.7. Patapsco Sewershed

Below is a summary of recorded SSOs in the City that, based on the hydraulic model, are associated with the sewers that do not meet the level of protection criteria.

Phase II Project ID	Manhole ID		No. of model-predicted SSOs		No. of reported SSOs (since 10/2017)	Total Recorded SSO Volume (gal)	Estimated Cost	Corrective action
	Upstream	Downstream	10 year	5 year				
PA-2A	S43M2_004MH	S47K2_066UN	0	23	1	1,043	\$6,242,248	Flow monitor

As indicated in the table above, the sewers associated with Project PF-2A do not meet the LOP based on hydraulic modeling; however, the number of reported/recorded SSOs are insignificant or significantly less than predicted by the model. A copy of the SSO work orders is provided in Appendix C. DPW believes that the hydraulic model may be over-predicting the number of sewer overflows; therefore, DPW will complete confirmatory flow monitoring and analysis to determine if hydraulic improvements are needed. The project extents (i.e. upstream and downstream manhole IDs) noted above may be revised based on additional analysis and/or design work. The map below shows the location of each project.

6.5.8. West Low Level Sewershed

DPW&T eliminated the SSO structures noted below. According to DPW&T, there are no known SSOs in the vicinity of the SSO structures 116 and 117 since elimination; however, SSO Structure 118 has remained active. According to DPW&T, SSO Structure 118 activated on July 13 and 14, 2025 (86,419 and 88,407 gallons, respectively).

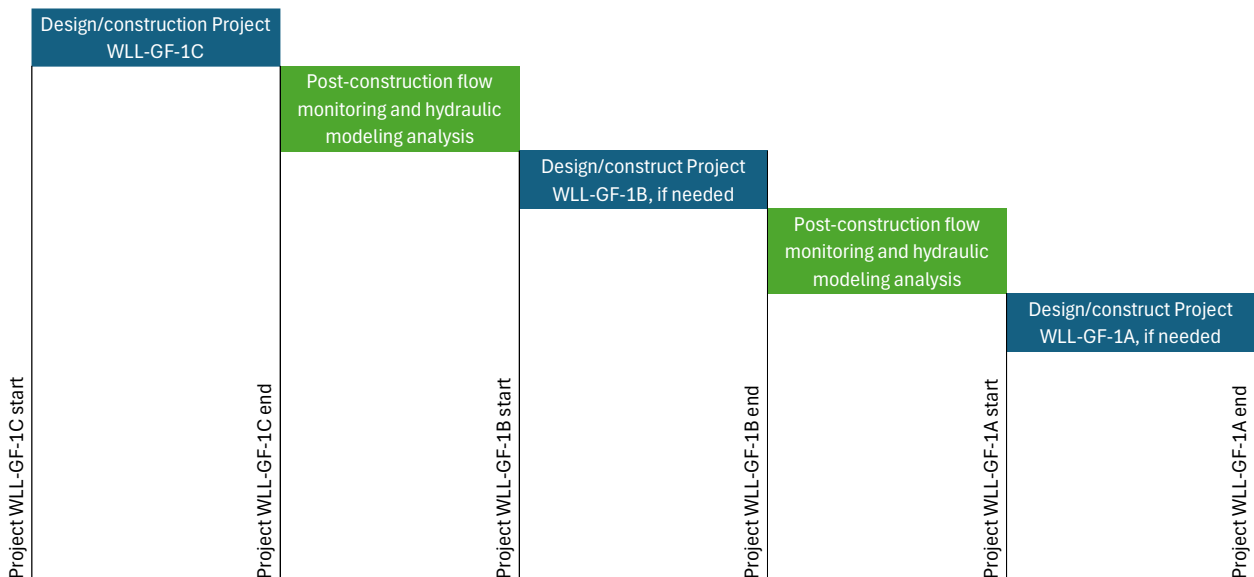

SSO structure ID	Elimination date
116	2/10/2025
117	1/27/2025
118	Active

Below is a summary of recorded SSOs in the City that, based on the hydraulic model, are associated with the sewers that do not meet the level of protection criteria.

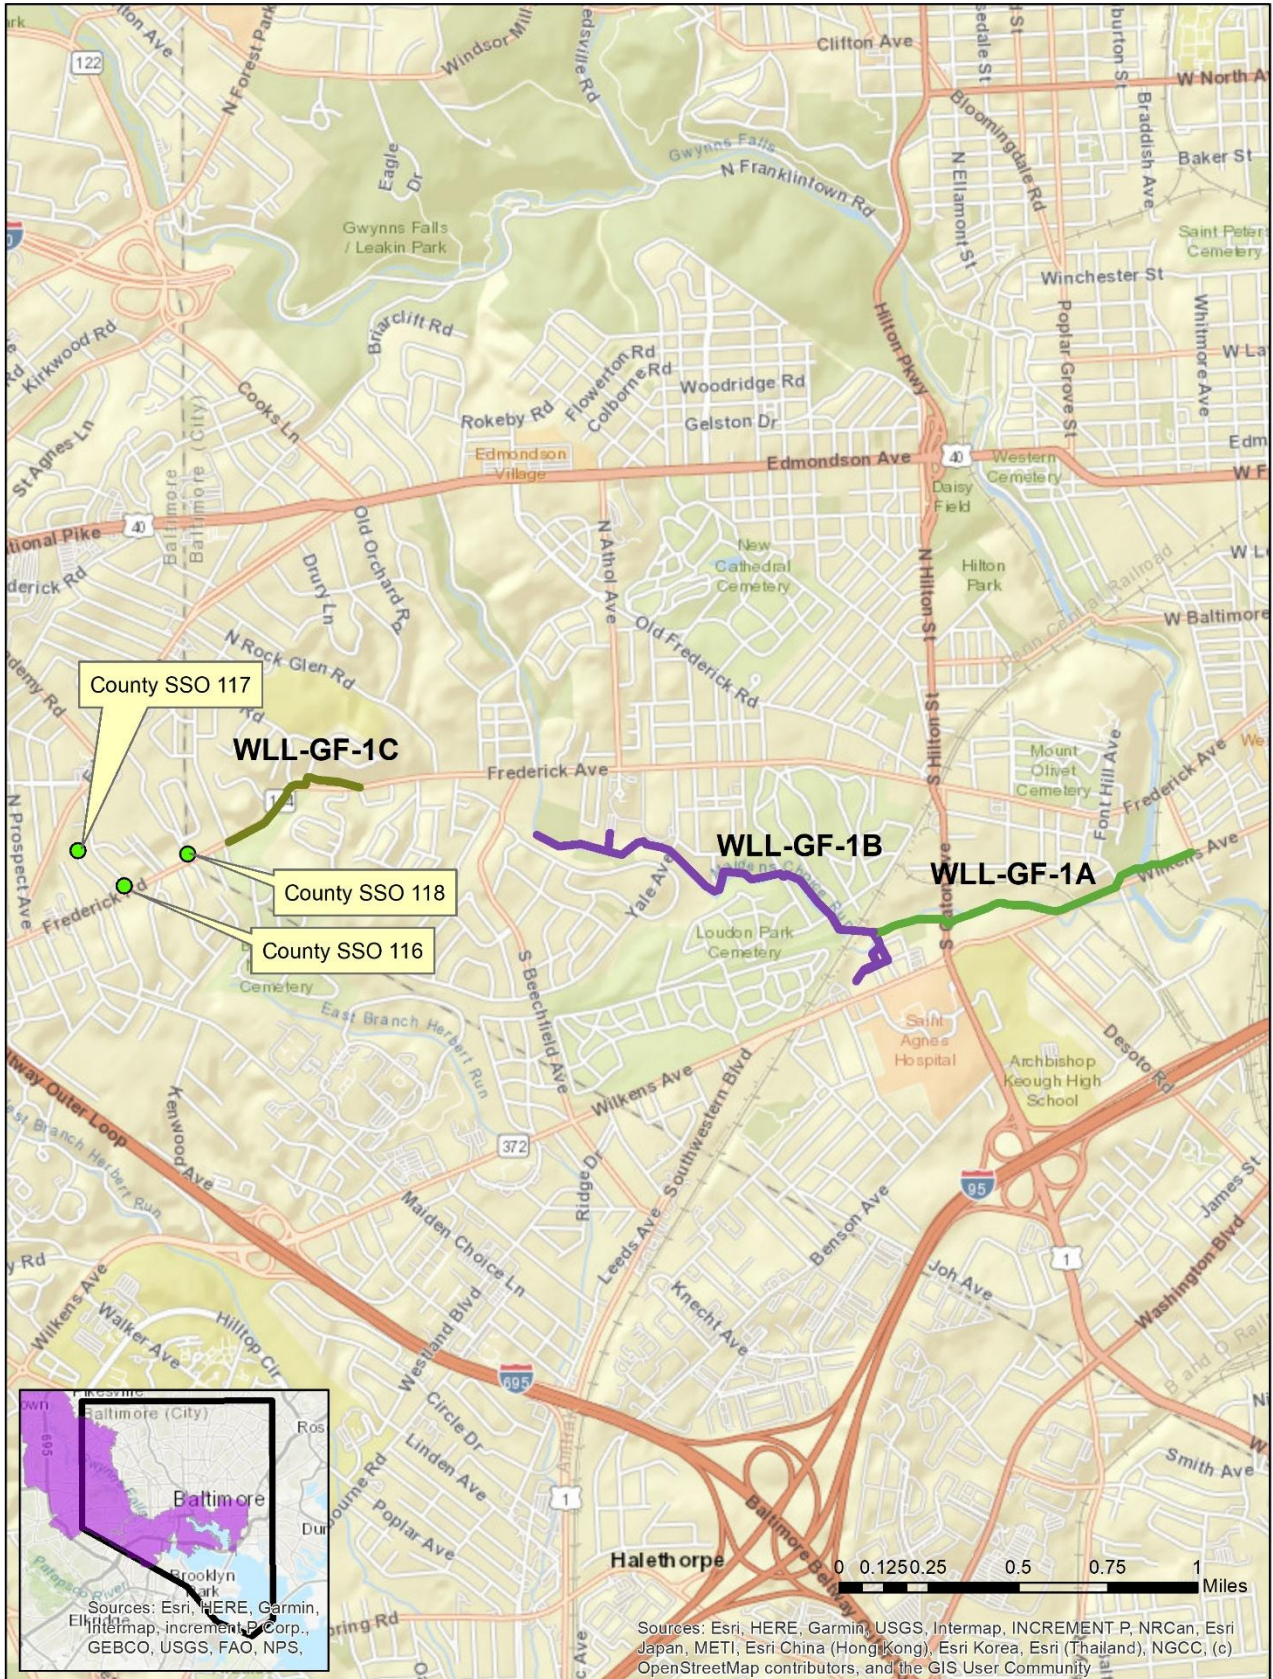

Phase II Project ID	Manhole ID		No. of model-predicted SSOs		No. of reported SSOs (since 10/2017)	Total Recorded SSO Volume (gal)	Estimated Cost	Corrective action
	Upstream	Downstream	10 year	5 year				
WLL-GF-1A	S09S__028MH	S15Q__013MH	0	0	0	0	\$20,016,866	Flow monitor
WLL-GF-1B	S01O__005MH	S09S__006MH	32	16	2	1,309,500	\$29,383,678	Flow monitor
WLL-GF-1C	S06O__007MH	S04M__014MH	0	6	1	586	\$6,096,958	Increase hydraulic capacity

Since County SSO Structure 118 has activated multiple times; DPW will complete hydraulic improvements of the sewer segments, as needed. The sewers associated with Projects WLL-GF-1A and WLL-GF-1C do not meet the LOP based on hydraulic modeling; however, the number of reported/recorded SSOs are insignificant or significantly less than predicted by the model. A copy of the SSO work orders is provided in Appendix C. DPW and DPW&T believe that the hydraulic model may be over-predicting the number of sewer overflows; therefore, DPW will complete confirmatory flow monitoring and analysis to determine if hydraulic improvements are needed. The graphic below summarized DPW’s project sequencing.

Projects WLL-GF-1A, WLL-GF-1B and WLL-GF-1C sequencing

The project extents (i.e. upstream and downstream manhole IDs) noted above may be revised based on additional analysis and/or design work. The map below shows the location of each project.

6.6. Additional Data Collection after Phase II Plan Completion

As previously described, DPW will complete post-construction flow monitoring and analysis to determine the effectiveness of the associated improvement project. DPW and DPW& T will also complete hydraulic modeling analysis of some improvement projects as described in Section 6 of this plan to assess project effectiveness. The flow monitoring efforts are estimated to cost \$20M.

6.7. Hydraulic Improvement Effectiveness Assessment

DPW will review the following performance indicators to track and assess the effectiveness of the hydraulic improvements:

- Number of wet-weather SSOs per year
- Wet-weather SSO volume per year
- Capture coefficient reduction (only in areas with sewer/manhole rehabilitation)
- Decrease in number of wet-weather SSOs per dollar spent for each hydraulic capacity improvement project
- Decrease in wet-weather SSO volume per dollar spent for each hydraulic capacity improvement project

6.8. Continue Hydraulic Modeling Partnership with Baltimore

DPW and DPW&T will jointly review model-predicted SSO flow monitoring data and hydraulic modeling to identify future collection system improvements, if any that will eliminate existing overflow structures that are located in the County and to meet the MCD LOP in the City. DPW and DPW&T believe the joint modeling and flow monitoring analysis is the best method to resolve recurring overflows while acknowledging the authority and financial resources of two independent municipalities. To date, DPW and DPW&T have engaged in multiple hydraulic modeling technical workshops to develop a hydraulic model that both agencies believe is properly developed and calibrated based on recorded flow monitoring data. DPW prepared and submitted to DPW&T a baseline model development report to document the model development processes.

7. Plan and Schedule for Implementing Rehabilitation and Corrective Actions

The plan and schedule to implement and complete the Phase II Plan is detailed below.

7.1. Miscellaneous Structural Improvements

Manhole ID	Sewer ID	Sewershed	Previous sanitary contract	New sanitary contract	Anticipated construction completion date
S27I_028MH		Low Level	963	1029	December 31, 2025
S01OO_011MH		Gwynns Falls	977	1029	December 31, 2025
S01OO_011MH	S01OO_011G1	Gwynns Falls	977	1029	December 31, 2025
	S03MM_002G1	Gwynns Falls	977	1004	December 31, 2026
	S03KK_016G1	Gwynns Falls	977	1004	December 31, 2026
	S03KK_019G1	Gwynns Falls	977	1004	December 31, 2026
S03MM_065MH		Gwynns Falls	977	1029	December 31, 2025
S05GG_002MH		Gwynns Falls	977	1029	December 31, 2025
S07GG_011MH		Gwynns Falls	977	1029	December 31, 2025
S09EE_007MH		Gwynns Falls	977	1029	December 31, 2025
S09EE_031MH		Gwynns Falls	977	1029	December 31, 2025
	S03SS_020G1	Gwynns Falls	977	1004	December 31, 2026

7.2. SSO Structure Elimination

Activity Name	Anticipated end date
Elimination of SSO Structures 67, 72, 152, & 154	
SC 966 - Large Interceptor Cleaning	December 31, 2025
SC 1028R - Large Interceptor Cleaning	December 31, 2028
SC 949 Stony Run Pump Station	December 31, 2030

7.3. Sewer/Manhole Rehabilitation

DPW awarded sewer/manhole condition assessment contracts and work is ongoing to identify possible rehabilitation/replacement work. Additionally, DPW awarded design contracts to evaluate the condition assessment data and complete design work, if needed. Below are the anticipated project end dates by sewershed.

Sanitary contract ID	Contract status	Contract title	Type of work	Anticipated construction completion date
Citywide				
1019R	Active	CCTV Inspection of Sanitary Sewers in Northern Baltimore City	Inspection	December 31, 2026
1020R	Active	CCTV Inspection of Sanitary Sewers in Southern Baltimore City	Inspection	December 31, 2026
1021	Active	CCTV Inspection of Sanitary Sewers in Baltimore City	Inspection	December 31, 2026
1022	Active	CCTV Inspection of Sanitary Sewers In Baltimore City- Zone D	Inspection	December 31, 2026
1017	Planned	Inflow and infiltration reduction in various locations in the Baltimore City	Construction	December 31, 2030
Herring Run				
1329RK	Active	Herring Run Sewershed Inflow & Infiltration Reduction-Area A	Design	December 31, 2027
1329GF	Active	Herring Run Sewershed Inflow & Infiltration Reduction - Area B	Design	December 31, 2027
1004	Award	Herring Run Sewershed Inflow & Infiltration Reduction-Area A	Construction	December 31, 2027
1005	Award	Herring Run Sewershed Inflow & Infiltration Reduction - Area B	Construction	December 31, 2027

Sanitary contract ID	Contract status	Contract title	Type of work	Anticipated construction completion date
High Level				
1013	Planned	High Level Sewershed Inflow and Infiltration Reduction	Construction	December 31, 2029
Jones Falls				
1329J	Active	Jones Falls Sewershed Inflow & Infiltration Reduction-Area A	Design	December 31, 2029
1329AE	Award	Jones Falls Sewershed Inflow & Infiltration Reduction	Design	December 31, 2027
1330J	Active	Jones Falls Sewershed Inflow & Infiltration Reduction-Area D	Design	December 31, 2028
1330RK	Active	Jones Falls Sewershed Inflow & Infiltration Reduction-Area C	Design	December 31, 2028
1006	Award	Jones Falls Sewershed Inflow & Infiltration Reduction-Area D	Construction	December 31, 2027
1007R	Award	John Falls Sewershed Inflow and Infiltration Reduction Area B	Construction	December 31, 2027
1009	Planned	Jones Falls Sewershed Inflow & Infiltration Reduction-Area D	Construction	December 31, 2028
1010	Planned	Jones Falls Sewershed Inflow & Infiltration Reduction-Area C	Construction	December 31, 2028
1014	Planned	Jones Falls Sewershed Inflow and Infiltration Reduction	Construction	December 31, 2029
1015	Planned	Jones Falls Sewershed Inflow and Infiltration Reduction	Construction	December 31, 2030
1016	Planned	Jones Falls Sewershed Inflow and Infiltration Reduction	Construction	December 31, 2030
Low Level				
1330H	Active	Inflow & Infiltration reduction in the Low Level and Herring Run Sewershed	Design	December 31, 2027
1330W	Award	Low level Sewershed Inflow & Infiltration Reduction	Design	December 31, 2027
1008	Planned	Inflow & Infiltration reduction in the Low Level and Herring Run Sewershed	Construction	December 31, 2028
1011	Planned	Low Level Sewershed Inflow and Infiltration Reduction	Construction	December 31, 2029
1012	Planned	Low Level Sewershed Inflow and Infiltration Reduction	Construction	December 31, 2028

7.4. Increasing Wet-Weather Hydraulic Capacity

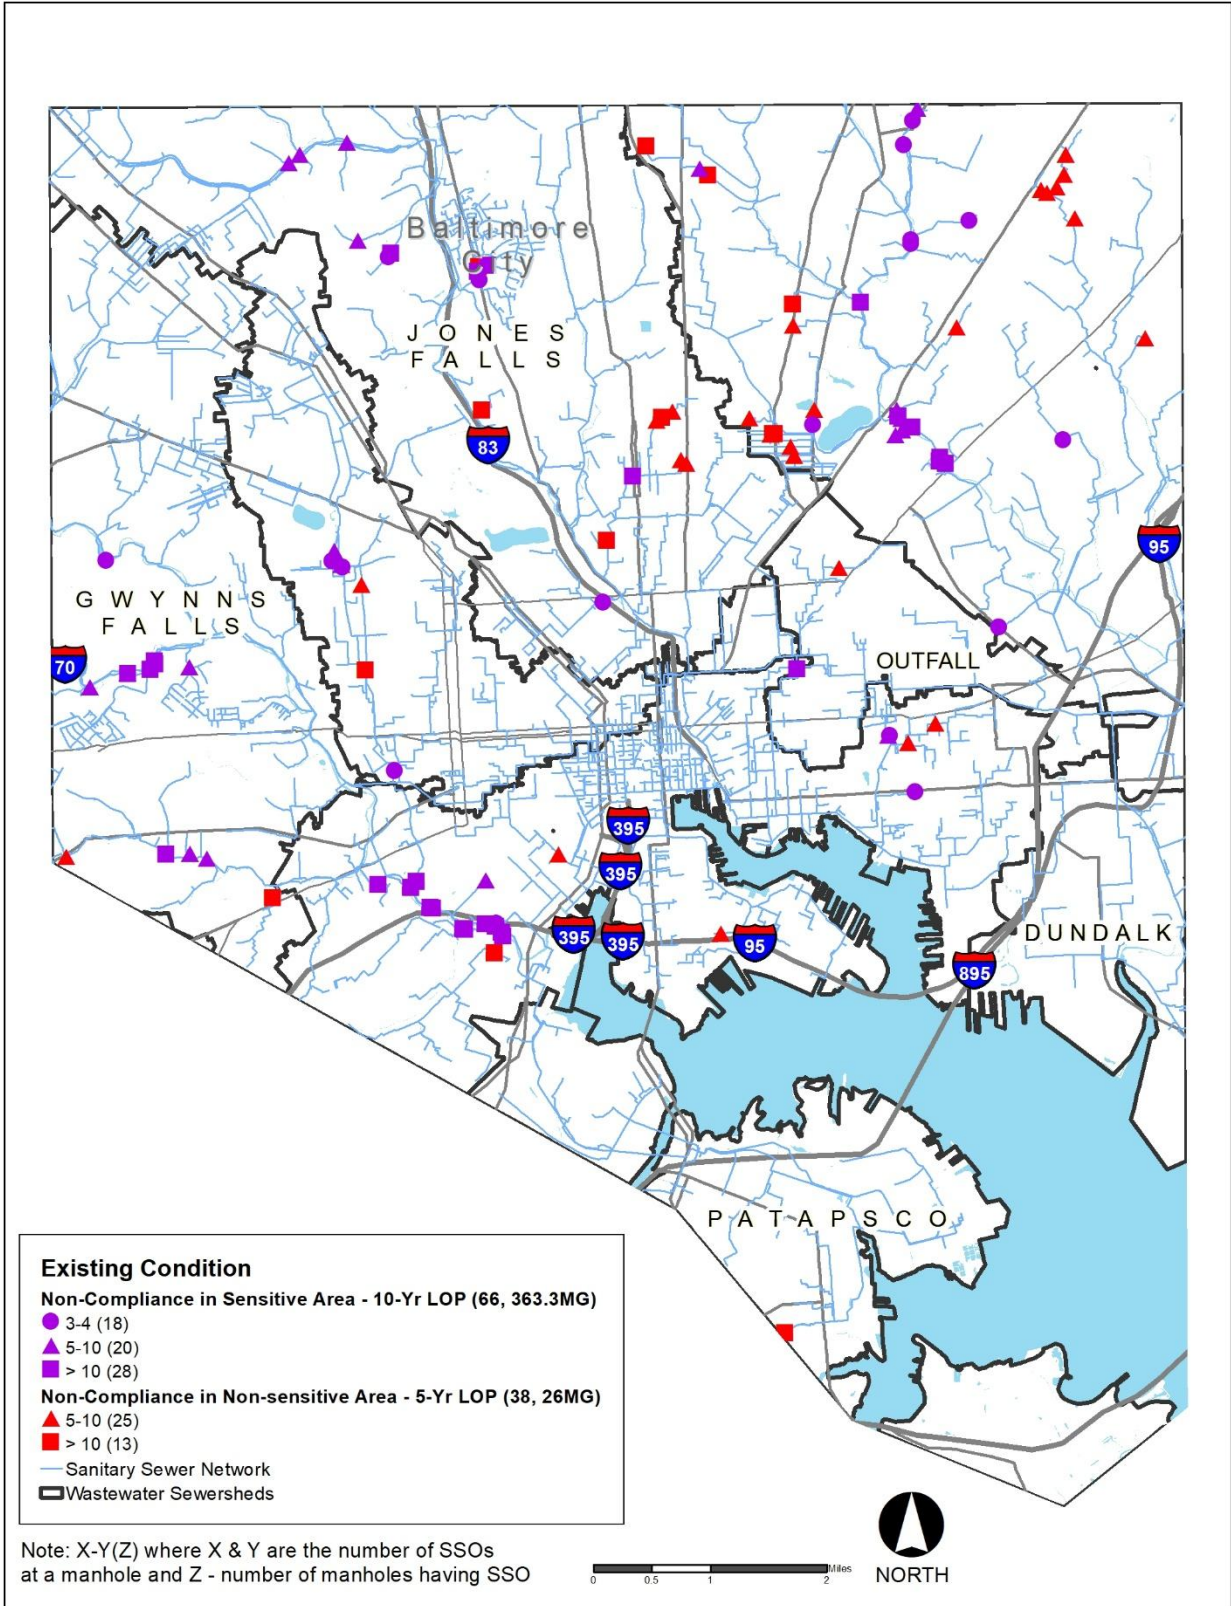

The table below provides the anticipated construction start and end dates for each project. The dates include 18 months of flow monitoring before design/construction for a project, when applicable. As noted in the table footnote, future flow monitoring analysis and/or hydraulic modeling review may determine that some of the projects listed below are not needed.

Phase II Project ID	Anticipated construction start date	Anticipated construction completion date
GF-2A	December 31, 2030	December 31, 2039
GF-3A ¹	December 31, 2030	December 31, 2035
GF-3B ¹	December 31, 2034	December 31, 2037
HL-2A	December 31, 2029	December 31, 2039
HL-3A ¹	December 31, 2031	December 31, 2035
HL-3B ¹	December 31, 2030	December 31, 2033
HR-1A	December 31, 2026	December 31, 2037
HR-1B ¹	December 31, 2035	December 31, 2042
HR-1C ¹	December 31, 2041	December 31, 2046
HR-2A ¹	December 31, 2026	December 31, 2033
HR-3A ¹	December 31, 2027	December 31, 2031
HR-3B ¹	December 31, 2027	December 31, 2030
HR-3C ¹	December 31, 2027	December 31, 2031
JF-2A	December 31, 2032	December 31, 2042
JF-3A ¹	December 31, 2026	December 31, 2030
JF-3B	December 31, 2029	December 31, 2032
