Spot quotations averaged 71 points lower than the previous week, according to the USDA, Agricultural Marketing Services Cotton and Tobacco Program. Quotations for the base quality of cotton (color 41, leaf 4, staple 34, mike 35-36 and 43-49, strength 27.0-28.9, and uniformity 81.0-81.9) in the seven designated markets, averaged 71.41 cents per pound for the week ending Thursday, June 4, 2026. The weekly average was down from 72.12 cents last week, but up from 62.66 cents reported in the corresponding period a year ago. Daily average quotations ranged from a high of 72.18 cents on Tuesday, June 2 to a low of 69.93 cents on Thursday, June 4. Spot transactions reported in the Daily Spot Cotton Quotations for the week ended June 4 totaled 8,583 bales. This is compared to 4,493 reported last week and 3,892 bales reported the corresponding week a year ago. Total spot transactions for the season were 1,504,079 bales compared to 962,453 the corresponding week a year ago. The ICE July settlement price ended the week at 74.89 cents, compared to 76.77 cents last week.

## Southeastern Markets Regional Summary

Danny Pino ♦ Macon, GA ♦ 478.752.3560 ♦ [Danny.Pino@usda.gov](mailto:Danny.Pino@usda.gov)

Spot cotton trading was slow. Supplies were moderate. Demand was moderate. Producer offerings were moderate. Average local spot prices were lower. Trading of CCC-loan equities was inactive.

Variable cloud coverage was observed during the period across the lower Southeast, with mostly sunny conditions observed late in the week. Daytime high temperatures were in the 80s and 90s. Nighttime lows were in the 60s and 70s. A cold front brought unseasonably cool conditions and scattered shower activity to the region over the weekend. Weekly accumulated precipitation totals measured from one-half of an inch to around three inches of moisture, with the heaviest totals recorded along the Gulf and Atlantic coastal areas. Heavier totals were recorded in localized areas. The moisture led to widespread drought reductions, according to the U.S. Drought Monitor. Planting continued in areas where dry conditions allowed, and seedlings were emerging in the earliest planted fields. According to the National Agricultural Statistics Service's (NASS) Crop Progress report released June 1, planting advanced to 83 percent completed in Alabama and 72 percent completed in Georgia.

Cloudy and overcast conditions across the upper Southeast gave way to sunny skies as the week progressed. Daytime high temperatures were in the 70s and 80s. Nighttime lows varied from the 40s to 60s. A cold front moved across the region, bringing scattered thunderstorms to areas throughout South

Carolina and areas of coastal North Carolina. Weekly accumulated precipitation totals measured from around one-half of an inch to three inches of moisture, with heavier totals recorded in some locations. The rainfall helped alleviate droughty conditions in the Carolinas, according to the U.S. Drought Monitor. According to NASS, planting advanced to 77 percent completed in North Carolina, 76 in South Carolina, and 68 percent completed in Virginia.

### [Textile Mill](#)

Domestic mill buyers inquired for a moderate volume of color 41, leaf 4, and staple 35 and longer for fourth quarter 2026 delivery. No sales and no additional inquiries were reported. Domestic yarn demand was slow to moderate. The undertone from mill buyers was cautious as they balanced raw cotton purchases with yarn orders.

Demand through export channels was moderate. Turkish mill buyers inquired for a moderate volume of USDA Green Card class, color 41, leaf 4, and staple 34 and longer for October 2026 through October 2027 shipment. Representatives for mills in Vietnam inquired for a moderate volume of color 42, leaf 5 and better, and staple 32 and longer for prompt through July shipment. Representatives for mills in Mexico inquired for a moderate volume of color 42 and 51, leaf 5 and better, and staple 32 and longer for prompt delivery. No sales were reported.

### [Trading](#)

- Even-running lots containing a moderate volume of color 21 and 31, leaf 2 and 3, staple 36 and longer, mike 35-49, strength 28-32, and uniformity 80-83 sold for around 79.75 cents per pound, FOB car/truck, Georgia terms (Rule 5, compression charges paid, 30 days free storage).

## South Central Markets Regional Summary

Aerielle McDaniel ♦ Memphis, TN ♦ 901.384.3016 ♦ [Aerielle.McDaniel@usda.gov](mailto:Aerielle.McDaniel@usda.gov)

### North Delta

Spot cotton trading was inactive. Supplies of available cotton were light. Demand was light. Producer offerings were light. Trading of CCC-loan equities were inactive. Average local spot prices were lower. Interest in forward contracting had begun to peak as market prices were on the rise.

Partly cloudy, but mostly sunny skies prevailed during the period. Daytime high temperatures began in the 90s, with overnight lows in the 70s. Scattered thunderstorms brought strong wind gusts and chilly rain, pushing daytime temperatures down into the 80s and nighttime lows into the 60s. Precipitation totals measured from trace amounts to around two and one-half inches of rain. Although the National Weather Service predicted quarter sized hail, mild hail damage was reported. Fields were too soggy to proceed with fieldwork activities. According to the U.S. Drought Monitor report, drought conditions in Arkansas remained at mostly severe to extreme drought conditions. Soil moisture levels improved to mostly moderate to severe in Tennessee. Missouri's drought conditions remained the same, within the range of abnormal to moderate. As reported by the National Agricultural Statistics Service's Crop Progress report released on June 1, cotton planted neared completion in Arkansas, Missouri, and Tennessee. Cotton squaring is 8 percent in Arkansas and 6 percent in Tennessee. No squaring was observed or reported in Missouri, but Arkansas and Tennessee are well ahead of the five-year average. As cotton continued to emerge, producers monitored fields for weed growth.

### South Delta

Spot cotton trading was inactive. Supplies of available cotton were light. Demand was light. Producer offerings were light. Trading of CCC-loan equities were inactive. Average local spot prices were lower. Interest in forward contracting had begun to peak as market prices were on the rise.

Mostly sunny skies with occasional overcast cloudiness were persistent throughout most of the reporting period. Daytime high temperatures were in the 80s and 90s. Overnight lows were in the 60s and 70s. Scattered thunderstorms, complimented by strong winds and cool rain, moved through the region. Accumulated precipitation totals measured from trace amounts to around three and one-quarter inches of rain. Fieldwork was at a halt until the soil was firm enough to support farming equipment. Soil moisture levels improved throughout the entire region, promoting drought reductions in Louisiana and Mississippi. According to the U.S. Drought Monitor report, soil moisture was on the rise in most of the Louisiana and Mississippi cotton-growing areas. Cotton continued to emerge in early and late planted fields. Squaring was not underway yet but is expected to begin soon. As reported by the National Agricultural Statistics Service's Crop Progress report released on June 1, cotton planted neared completion and is reported to be at 82 percent in Louisiana and 83 percent in Mississippi.

## Southwestern Markets Regional Summary

Bethany Lindgren ♦ Memphis, TN ♦ 901.384.3016 ♦ [Bethany.Lindgren@usda.gov](mailto:Bethany.Lindgren@usda.gov)

Jane Byers-Angle ♦ Lubbock, TX ♦ 806.283.9389 ♦ [Jane.Byers-Angle@usda.gov](mailto:Jane.Byers-Angle@usda.gov)

### East Texas-South Texas

Spot cotton trading was inactive. Supplies and producer offerings were light. Demand was light. Average local spot prices were lower. Trading of CCC-loan equities was inactive. No forward contracting activity was reported. Foreign mill inquiries were moderate. Interest was best from India, Pakistan, and Vietnam.

In East Texas, sunshine and dry conditions early in the period transitioned into rain showers later in the week. Daytime high temperatures were in the 80s and 90s, with nighttime lows in the 60s to 70s. Scattered showers produced from trace amounts to more than one-half of an inch of moisture. Stands were squaring and blooming. Heavy rainfall and prolonged wet conditions have left fields soggy and made weed control difficult. Extension experts reported increasing fleahoppers in the Blacklands and Brazos River Bottoms, and recommended spray treatments to control pest populations. Wet weather continued across the region during the week as thunderstorms rolled through the cotton-growing areas of South Texas. Daytime high temperatures ranged from the 80s to the 90s. Overnight low temperatures were in the 70s. Accumulated moisture totals varied from trace amounts up to more than one and one-quarter inches of rain. Producers made applications of pesticides to remove populations of fleahoppers and herbicides to combat weeds. Muddy field conditions made weed and pest control difficult in the lower Rio Grande Valley after significant rainfall, but conditions were improving. The Texas Cotton Ginners Association held its first District meeting on May 21 in Kingsville, TX.

### West Texas-Kansas-Oklahoma

Spot cotton trading was active. Supplies were light. Producer offerings were light. Demand was light. Average local spot prices were lower. Producer interest in forward contracting was moderate. Trading of CCC-loan equities was inactive. Foreign mill inquiries were moderate. Interest was best from India, Pakistan, and Vietnam.

A mix of sun and periods of rain and thundershowers dominated the weather pattern across West Texas and eastern New Mexico during the reporting period. Totals varied from trace amounts to over two and one-quarter inches of precipitation.

Some hail was reported. The moisture was welcomed and improved industry sentiment. Some areas remained soggy, and sowing activities were delayed. Fields were sprayed by ground rigs and through aerial applications. Daytime highs ranged from the mid-80s to the low 100s, while overnight lows were in the 60s to 70s. Planting continued in the Southern High Plains and in the Rolling Plains. Stands developed and were scouted for pests. Planting expanded early in the period ahead of forecasted storms and May 31, June 1, and June 5 planting deadlines. June 10 and June 20 final planting deadlines remain in the Southern High Plains and Rolling Plains. Planting deadlines for full insurance coverage was May 31 for the eastern New Mexico counties considered in the West Texas market. Planting continued after the deadlines qualify for reduced insurance rates until the acreage committed to cotton is fully sown.

Daytime highs in Kansas held steady in the mid-80s to mid-90s, while nighttime lows were in the 60s. Most of the cotton-growing areas received from a few tenths to more than three inches of beneficial precipitation. Industry sources were encouraged by recent rainfall and improved soil conditions. Planting continued, and stands slowly emerged. Producers, agents, and consultants scouted for thrips on the cotyledons and young plants. Planting deadlines have passed for Kansas cotton full-insurance coverage. June 1 was the deadline for southwestern counties' and June 5 was the deadline for south central counties. Planting will continue at reduced insurance levels until acres are fully planted.

Daytime temperatures across Oklahoma ranged from the mid-80s into the upper 90s, while overnight lows held steady in the 60s and 70s. Partly cloudy and occasional rain persisted during the period. Most cotton-growing areas received from a trace amount up to more than one inch of rainfall. Planting dryland acres continued. The irrigated stands had begun to emerge. Experts scouted fields for disease and insects. Weeds were on the way. June 1 and June 5 planting deadlines for full insurance in the Panhandle and in the northern counties have passed. The remaining counties, including southwestern Oklahoma have either a June 10 or June 20 deadline.

## Southwestern Markets Regional Summary

Bethany Lindgren ♦ Memphis, TN ♦ 901.384.3016 ♦ [Bethany.Lindgren@usda.gov](mailto:Bethany.Lindgren@usda.gov)

## Western Markets Regional Summary

Bethany Lindgren ♦ Memphis, TN ♦ 901.384.3016 ♦ [Bethany.Lindgren@usda.gov](mailto:Bethany.Lindgren@usda.gov)

### [Desert Southwest \(DSW\)](#)

Spot cotton trading was inactive. Supplies and producer offerings were light. Demand was light. No producer interest in forward contracting was reported. Average local spot prices were lower. No domestic mill activity was reported. Foreign mill inquiries were light.

Sun and clouds were observed throughout the week in the DSW, with heavy mid-week rains reported in New Mexico and El Paso, TX. Daily temperatures varied from the 80s to the 100s. Nighttime lows were in the 60s and 70s. Showers in parts of Arizona and New Mexico produced from trace amounts of moisture up to one and three-quarter inches of rainfall. Bolls were developing, and stands were progressing. Stands were blooming in Yuma, AZ. In El Paso, TX, pest pressures were light, and stands were making good progress.

### [San Joaquin Valley \(SJV\)](#)

Spot cotton trading was inactive. Supplies and demand were light. No forward contracting was reported. Domestic mill activity was light. Average local spot prices were lower. Foreign mill inquiries were light.

Clear, open skies and abundant sunshine prevailed in the SJV. Daytime highs were in the 90s to the 100s. Nighttime lows in the 50s climbed into the 70s. Light accumulations of rainfall were reported. A wetter planting season and cooler temperatures had

temporarily slowed expected stand growth, but warming summertime temperatures will be beneficial as heat units build to help the crop catch up. Stands were nearing squaring in several fields. Producers noted higher populations of thrips, and treatments were ongoing. Irrigation was applied.

### [American Pima \(AP\)](#)

Spot cotton trading was inactive. Supplies were moderate. Demand was light. Light forward contracting was reported. Domestic mill activity was light. Average local spot prices were steady. Foreign mill inquiries were moderate.

Sunny skies and rising temperatures were reported in the SJV. Small pop-up showers produced light accumulations of moisture. Daily temperatures were in the 90s and 100s. Nighttime low temperatures were in the 50s to 70s. Some fields are later than expected due to a cooler and wetter than unusual planting window this year. Rising temperatures over the coming weeks will be beneficial to build heat units and push plant development. Spray applications were made to treat pests. In the DSW, mostly sunny and dry conditions were briefly interrupted by thunderstorm activity in New Mexico and El Paso, TX, producing from trace amounts up to one and three-quarter inches of rainfall across the region. Plants were putting on fruit and developing satisfactorily. Blooms were seen in fields in Yuma County. Pest pressures were reported as light in El Paso, TX.

### *San Joaquin Valley*

- No trading activity was reported.

### *American Pima*

- No trading activity was reported.

## Forward Contracting

Upland cotton growers in the United States had booked 13 percent of their expected acreage by the end of May this season. This was above the 1 percentage that was booked through the same period last year. Contracting has been most active in the South Central and Southwestern states, where 14 percent of the crop had been booked in both areas. In the Southeastern states, 10 percent of the crop was under contract. Western states' growers had booked less than 1 percent of the crop, compared to no reported forward contracting during the same time period a year ago. These estimates were based on the National Agricultural Statistics Board's March Prospective Plantings report and information collected by the Cotton and Tobacco Program's Market News Division.

Description	2024-2025		2025-2026	
	Through May 29, 2025		Through May 28, 2026	
	Week	Mkt. Year	Week	Mkt. Year
Outstanding sales	-	2,210,800	-	2,450,500
Exports	316,100	9,314,500	268,800	8,882,700
Total export commitments	-	11,525,300	-	11,333,200
New sales	115,100	-	193,200	-
Buy-backs and cancellations	5,300	-	5,900	-
Net sales	109,800	-	185,300	-
Sales next marketing year	39,000	1,336,700	77,100	1,821,400

Net sales of Upland totaling 185,300 RB for 2025/2026 were up 21 percent from the previous week and 62 percent from the prior 4-week average. Increases primarily for Vietnam (109,900 RB, including 100 RB switched from South Korea and decreases of 200 RB), Pakistan (16,500 RB), Turkey (14,200 RB), China (11,000 RB, including 1,400 RB switched from Malaysia, 400 RB switched from Vietnam, and decreases of 4,700 RB), and Bangladesh (8,200 RB), were offset by reductions for South Korea (100 RB). Net sales of 77,100 RB for 2026/2027 were primarily for Mexico (24,000 RB), Indonesia (14,100 RB), Pakistan (12,300 RB), Vietnam (10,600 RB), and Thailand (7,700 RB). Exports of 268,800 RB were down 15 percent from the previous week and 12 percent from the prior 4-week average. The destinations were primarily to Vietnam (79,100 RB), Turkey (48,200 RB), Pakistan (41,700 RB), China (26,200 RB), and Bangladesh (22,200 RB). Net sales of Pima totaling 5,400 RB for 2025/2026 were up 95 percent from the previous week, but down 34 percent from the prior 4-week average. Increases reported for India (3,600 RB), Djibouti (1,300 RB switched from China), Hong Kong (1,100 RB), Vietnam (400 RB), and Japan (300 RB), were offset by reductions for China (1,300 RB). Net sales of 36,800 RB for 2026/2027 were reported for Vietnam (35,200 RB) and India (1,600 RB). Exports of 18,700 RB--a marketing-year high--were up noticeably from the previous week and up 69 percent from the prior 4-week average. The destinations were primarily to India (6,800 RB), Vietnam (5,200 RB), Pakistan (3,200 RB), China (2,200 RB), and Bangladesh (700 RB).
