## Current National Drought Summary (February 6, 2018)

During the 7-day period (ending Tuesday morning), near- to above-normal precipitation was observed from the interior Southeast into New England, while dryness intensified across the southern half of the Plains and much of the southwestern quarter of the nation. Drought continued to expand on the southern Plains, while a reduction in drought intensity and coverage was noted in parts of the south and east where rain and snow were heaviest. The situation across the western U.S. presented sharply diverging scenarios, with good season-to-date moisture supplies across the northern Rockies and Pacific Northwest in sharp contrast to intensifying drought and a lack of vital snowpacks across central and southern portions of the Rockies and Sierra Nevada.
